List of tables	i
List of figures	iii
Nomenclature	xi
1 Introduction	1
1.1 Literature Review	1
1.2 Research Objectives	5
1.3 Thesis Outline	6
2 Quasi-Periodic Motion in Dynamical Systems	9
2.1 Illustrative Example: The Forced VAN-DER-POL Equation	10
2.2 Theoretical Aspects	13
2.2.1 Characteristic Properties	19
2.2.2 Transition between Periodic and Quasi-Periodic Motions	22
2.2.2.1 NEIMARK-SACKER Bifurcation	23
2.2.2.2 Synchronization	30
2.2.3 Distinction to Almost Periodic and Chaotic Motions	37
2.3 The Invariance Equation	40
2.3.1 State-Space Approach: Torus Functions of Manifolds	44
2.3.2 Hyper-Time Approach: Torus Functions of Motions	52
2.3.3 Diffeomorphism: Connection of the Approaches	57
3 Discretization Methods for the Hyper-Time Invariance Equation	65
3.1 Shooting Method	67
3.1.1 Method of Characteristics	69
3.1.2 Equation System and Numerical Aspects	71
3.2 FOURIER-GALERKIN Methods	76
3.2.1 Full-Discretization and Numerical Aspects	77
3.2.2 Semi-Discretization	82
3.3 Finite Difference Method	84
3.3.1 Finite Difference Schemes	86
3.3.2 Numerical Aspects	89

4	Stability Analysis of Stationary Motion	95
4.1	Established Methods for Stationary Solutions	102
4.1.1	Stationary Points: Constant JACOBIAN Matrix	102
4.1.2	Periodic Motions: FLOQUET Theory	104
4.1.3	General Motions: LYAPUNOV Exponents	108
4.2	An Approach to Quasi-Periodic Solutions	114
4.2.1	Spatial Approach: The Sufficient Instability Criterion	116
4.2.2	Temporal Approach: The Stability Criterion	121
5	Numerical Analysis of Dynamical Systems Exhibiting Quasi-Periodic Motions	129
5.1	Investigation of Approximation Methods Utilized by QUONT	131
5.1.1	Comparison of Discretization Approaches and Validation of the FDM	132
5.1.2	Verification and Validation of the Temporal Approach	137
5.1.3	Continuation of a Quasi-Periodic Motion	139
5.1.4	Excursus: Synchronization	143
5.2	Nonlinear Rotor-Dynamical Systems	147
5.2.1	Rotor-to-Stator Contact System	147
5.2.2	Generator Rotor with Unbalanced Magnetic Pull	155
5.3	Cyclic and Symmetric Structure with Regularized Non-Smooth Nonlinearities	165
5.3.1	Lumped Parameter Bladed Disk Model	166
5.3.2	Continuation and Analysis	169
6	Conclusions and Outlook	183
6.1	Summary	183
6.2	Conclusions of Research Objectives	186
6.3	Outlook for Further Investigations	187
A	Supplementary Analysis to Chapter 5	191
A.1	Comparison of an Upwind Difference Scheme with a Central Difference Scheme	191
B	QUONT	192
B.1	Input Files: Quasi-Periodically Forced DUFFING Oscillator	196
B.2	Input Files: Rotor-to-Stator Contact System	198
B.3	Input Files: Generator Rotor with Unbalanced Magnetic Pull	201
B.4	Input Files: Lumped Parameter Bladed Disk Model	205
	Bibliography	210
