1	Introduction	1
1.1	History	2
1.1.1	Preface from Vitruv – De Architectura 27 B.C.	2
1.1.2	How long is concrete been used?	4
1.1.3	How long has fiber-reinforced concrete been used?	6
1.2	Basic Aspects	7
1.2.1	Classification of the building material	7
1.2.2	Fire behavior of the building material	9
1.2.3	dimensioning of the building material	10
1.2.4	Requirements for standardization and for the construction industry	11
1.3	Standards and guidlines	12
1.3.1	Standarts	12
1.3.2	Regulations	12
2	Definitions	15
2.1	Terms	15
2.2	Characters	16
2.3	Units	19
3	Concrete	21
3.1	Concrete types	21
3.2	Concrete classes	22
3.3	Extended characteristic values	25
3.4	Cement	28
3.5	Aggregates (surcharge)	30
3.6	Water	33
3.7	Additional concrete	33
3.7.1	Additives	33
3.7.2	Concrete admixtures	34
3.8	Concrete properties	35
3.8.1	Types of Concrete	35

3.8.2	Actions on the concrete	36
3.8.3	Consistency	38
3.8.4	Abbreviations	38
3.8.5	Shrinkage	39
3.8.6	Cement stone	40
3.9	Environmental compatibility	45
4	Fibers	47
4.1	General information	47
4.2	Plastic fibers	48
4.2.1	Mikrofibers	48
4.2.2	Makrofibers	49
4.3	Steel fibers	50
4.3.1	Hook shape	52
4.3.2	Waveform	53
4.3.3	Compressed form	53
4.4	Glass fibers	54
4.4.1	Alkali-resistant fibers	54
4.4.1.1	Integral glass fibers	55
4.4.1.2	Water dispersible glass fibers	56
4.4.2	Non-alkali-resistant fibers	57
4.5	Natural fibers	57
4.5.1	Plant fibers	57
4.5.2	Animal fibers	57
5	FC processing	59
5.1	Types of concrete to be used	59
5.2	Additives for pumped concrete	59
5.3	Common dosages	60
5.4	Addition of fibers	60
5.5	Hedgehog formation	62
5.6	Installation of fiber-reinforced concrete	64
5.6.1	In building construction and civil engineering	64
5.6.2	For fiber-reinforced shotcrete	68
5.7	Different fiber materials	71
5.7.1	Plastic fiber concrete	72
5.7.1.1	Constructive applications	72
5.7.1.2	Statically effective applications	72

5.7.1.3	Thermally effective applications	73
5.7.1.4	Effects of interest from a building biology point of view	73
5.7.2	Steel fiber concrete	74
5.7.2.1	Constructive applications	74
5.7.2.2	Statically effective applications	75
5.7.3	Glass fiber concrete	75
5.7.3.1	Constructive applications	75
5.7.3.2	Statically effective applications	75
5.7.4	Carbon fiber concrete	76
5.7.4.1	Constructive applications	76
5.7.4.2	Statically effective applications	76
6	Properties	77
6.1	Concrete properties	77
6.2	Fiber properties	84
6.2.1	Plastic fibers	85
6.2.1.1	Microfibers	85
6.2.1.2	Macrofibers	87
6.2.2	Steel fibers	88
6.2.3	Glass fibers	89
6.3	Setting process	89
6.4	Fibers to prevent shrinkage cracks	94
6.4.1	Mix calculation for concrete	95
6.4.2	Determination of the grain surface	95
6.4.3	Determination of the fiber surface	97
6.4.4	Avoidance of shrinkage cracks	98
6.5	Composite effect of fibers	98
6.5.1	Material characteristics of the fibers	100
6.5.2	Geometry of the fibers	101
6.5.3	Geometry factor	102
6.5.4	Dosage	103
6.5.5	Spatial distribution of the fibers in the concrete	104
6.5.6	Shape angle for power transmission	109
6.5.7	Friction factors of the fibers	110
6.5.8	Determining the fiber tension	110
6.5.8.1	From the concrete strain	110
6.5.8.2	From the fiber characteristics	111

6.6	Material testing experiments	112
6.6.1	Experimental arrangement	112
6.6.1.1	Simple bending beam	112
6.6.1.2	Simple bending beam with notch	113
6.6.1.3	Standard bending beam	116
6.6.2	Experimental procedure	118
6.6.3	Evaluation of the measured data	119
7	FC dimensioning	121
7.1	Dimensioning procedure	121
7.1.1	Service load method	122
7.1.2	Load method	123
7.1.3	Design with partial safety factors	124
7.2	Reliability concepts	125
7.2.1	Deterministic reliability principle	125
7.2.2	Probabilistic reliability principle	126
7.2.3	Semiprobabilistic reliability principle	126
7.2.4	Verification of structural safety	126
7.2.5	Verification of suitability for use	128
7.3	Dimensioning theorie	129
7.3.1	Dimensioning for material selection - dosage	129
7.3.1.1	Bending	129
7.3.1.2	Bending with longitudinal force	135
7.3.1.3	Compression struts	140
7.3.1.4	shear check	142
7.3.1.5	Breakout of a support	145
7.3.2	Dimensioning for cross-section selection - Dimensioning	147
7.3.2.1	Bending	148
7.3.2.2	Bending with longitudinal force	149
7.3.2.3	Compression struts	152
7.3.2.4	shear check	154
7.3.2.5	Breakout of a support	157
7.4	Dimensioning samples	158
7.4.1	Cross-section in bending	159
7.4.1.1	Plastic fiber	159
7.4.1.2	Steel fiber	166
7.4.1.3	Glass fiber	174

7.4.2 Cross-section in bending with normal force 177

7.4.2.1 Plastic fiber 177

7.4.2.2 Steel fiber 182

7.4.3 Cross-section in compression (buckling) 185

7.4.3.1 Plastic fiber 185

7.4.3.2 Steel fiber 187

7.4.4 Cross section on shear force 189

7.4.4.1 Plastic fiber 189

7.4.4.2 Steel fiber 191

7.4.5 Application with shotcrete 193

7.4.5.1 Plastic fiber 193

7.4.5.2 Steel fiber 201

7.4.6 Application with inverted T-beam 205

7.4.7 Design for a bridge 206

7.4.8 Design for a harbor wall without anchor 210

7.4.9 Comparison of design with different fibers 216

7.4.9.1 Comparison with different fibers 216

7.4.9.2 Comparison with shrink fiber and different fibers 217

8 Applications 221

8.1 Base plates 221

8.1.1 Residential buildings 221

8.1.2 Industrial floors 222

8.2 Walls 223

8.2.1 Basement walls 223

8.2.2 Wall scopes 224

8.3 Ceilings 226

8.3.1 Residential buildings 226

8.3.2 Industrial buildings 227

8.4 Beams 228

8.4.1 Undercoats and overcoats 228

8.4.2 Single beam 228

8.4.3 Roadways 229

8.5 Galleries 229

8.5.1 Footpaths and cycle paths 229

8.5.2 Roads 230

8.6	Tunnel lining	231
8.6.1	support measures	232
8.6.2	Inner lining	233
8.7	Tubbings	234
8.7.1	Tunnel construction	234
8.7.2	Shaft sinking	235
8.8	Prefabricated parts	235
8.8.1	Pipes	236
8.8.2	Slabs and ceilings	236
8.8.3	Stairs	237
8.8.4	Retaining walls	238
8.9	Construction pit and slope stabilisation	239
8.9.1	Construction pits	239
8.9.2	Slope protection	242
8.9.3	Wall protection	243
8.10	Videos of construction sites	245
