|-------------------------------------------------------------------------|-----|
| Abstract.....                                                           | iii |
| Zusammenfassung .....                                                   | v   |
| Acknowledgments.....                                                    | vii |
| Contents.....                                                           | xi  |
| Abbreviations .....                                                     | xvi |
| Symbols .....                                                           | xx  |
| 1 Introduction .....                                                    | 1   |
| 1.1 Background .....                                                    | 1   |
| 1.2 Approach for a Novel Augmented Virtuality Teleoperation System..... | 3   |
| 1.3 Motivation and Potential Relevance to Society .....                 | 5   |
| 2 State of the Art .....                                                | 7   |
| 2.1 Paradigms of Teleoperation Systems.....                             | 8   |
| 2.2 Environmental Perception .....                                      | 12  |
| 2.3 Motion Prediction of Vehicles .....                                 | 13  |
| 3 Gap Analysis.....                                                     | 17  |
| 3.1 Gap Identification.....                                             | 17  |
| 3.2 Objective .....                                                     | 19  |
| 3.3 Requirements and Boundary Conditions.....                           | 20  |
| 3.4 Thesis Scope .....                                                  | 21  |
| 4 Fundamentals and Methods .....                                        | 23  |
| 4.1 Definitions .....                                                   | 23  |
| 4.2 Augmented Virtuality Teleoperation System .....                     | 23  |
| 4.2.1 Vehicle Platform .....                                            | 25  |
| 4.2.2 Perception and Environment Reconstruction .....                   | 26  |
| 4.2.3 Predictive Modeling .....                                         | 27  |
| 4.2.4 User Handling .....                                               | 29  |
| 4.3 Predictive Modeling in Detail .....                                 | 30  |
| 4.3.1 Motion Prediction .....                                           | 31  |
| 4.3.2 Predictive Motion Planning .....                                  | 39  |
| 4.3.3 Latency Estimation .....                                          | 41  |
| 4.4 Key Metrics for Motion Prediction.....                              | 44  |
| 4.5 Metrics for the User Studies .....                                  | 47  |
| 4.5.1 Situation Awareness .....                                         | 48  |
| 4.5.2 Workload.....                                                     | 50  |
| 4.5.3 Usability .....                                                   | 51  |
| 5 Experimental Setup .....                                              | 53  |
| 5.1 UAV Setup .....                                                     | 53  |
| 5.2 Simulation Setup .....                                              | 55  |
| 5.3 User Studies Setup.....                                             | 56  |
| 5.3.1 User Study I - Human Behaviour in VR.....                         | 56  |

|       |                                                                |     |
|-------|----------------------------------------------------------------|-----|
| 5.3.2 | User Study II - User Interface Concept for a VR system.....    | 58  |
| 5.3.3 | User Study III - User Interface Concept for a SpaceMouse ..... | 60  |
| 6     | Results .....                                                  | 63  |
| 6.1   | Motion Prediction.....                                         | 63  |
| 6.1.1 | Simple PID-Controller Model.....                               | 65  |
| 6.1.2 | Modified PID-Controller Model .....                            | 70  |
| 6.1.3 | Differential-Equation Model.....                               | 74  |
| 6.1.4 | Data-Driven Models .....                                       | 78  |
| 6.1.5 | Summary .....                                                  | 87  |
| 6.2   | Sensitivity Analysis .....                                     | 87  |
| 6.2.1 | Simple PID-Controller Model.....                               | 87  |
| 6.2.2 | Modified PID-Controller Model .....                            | 89  |
| 6.2.3 | Differential-Equation Model.....                               | 91  |
| 6.2.4 | Data-Driven Model.....                                         | 93  |
| 6.2.5 | Summary .....                                                  | 93  |
| 6.3   | Latency Estimation .....                                       | 95  |
| 6.3.1 | Constant (Reference).....                                      | 95  |
| 6.3.2 | Passive Latency Estimation by Trajectory Analysis.....         | 96  |
| 6.3.3 | Active Estimation by ICMP Protocol .....                       | 98  |
| 6.3.4 | Active Estimation by TMTC Protocol .....                       | 98  |
| 6.3.5 | Summary .....                                                  | 99  |
| 6.4   | User Handling .....                                            | 100 |
| 6.4.1 | User Study I - Human Behaviour in VR.....                      | 100 |
| 6.4.2 | User Study II - User Interface Concept for a VR system.....    | 104 |
| 6.4.3 | User Study III - User Interface Concept for a SpaceMouse ..... | 108 |
| 6.4.4 | Summary .....                                                  | 111 |
| 7     | Use Case Studies .....                                         | 113 |
| 7.1   | Fire Services.....                                             | 113 |
| 7.2   | On-Orbit Servicing .....                                       | 121 |
| 7.3   | Stationary and mobile robots.....                              | 124 |
| 8     | Discussion .....                                               | 129 |
| 8.1   | Limits and Requirements of Environmental Reconstruction .....  | 130 |
| 8.2   | Challenges for Predictive Motion Planning .....                | 133 |
| 8.3   | Comparison of Motion Prediction Methods.....                   | 134 |
| 8.4   | Comparison of Latency Estimation Methods.....                  | 137 |
| 8.5   | Remarks on User Handling .....                                 | 139 |
| 8.5.1 | Human Behaviour in Virtual Reality.....                        | 139 |
| 8.5.2 | User Interface Design .....                                    | 140 |
| 9     | Conclusion and Outlook .....                                   | 143 |
| 9.1   | Summary.....                                                   | 143 |
| 9.2   | Conclusion.....                                                | 144 |
| 9.3   | Future Work .....                                              | 147 |
|       | References .....                                               | 163 |

|                                                        |     |
