Contents.....	V
Kurzfassung.....	IX
Abstract.....	XI
1 Introduction	1
1.1 Motivation.....	3
1.2 Outline and Contribution	5
2 Selected Fundamentals of Interfering WLANs	7
2.1 Efficiency of WLANs.....	7
Degrees of Freedom Concept.....	9
Used Efficiency Metrics.....	10
2.2 WLAN Communication Model	11
2.3 Channel Models	14
The AWGN Channel.....	15
The TGax Channel Model.....	15
The WINNER II Channel Model.....	17
Channel Properties Examples	18
2.4 Multi-Antenna Concepts	19
Linear Receivers	20
Singular Value Decomposition	21
Channel Capacity	22
Channel Measurements	23
Beamforming Simulations	26
2.5 Interference in WLANs.....	31
Interference Modelling.....	32
Interference Reach	34
2.6 Impacts on WLAN Efficiency	37
Topics Affecting Efficiency.....	37
Modulation and Coding	40
Packet Overhead	41
Protocol Overhead	43
Sounding Overhead.....	44
Channel Packet Errors.....	47
Single Link Resource Selection	53
Multi-Link Medium Sharing.....	58
2.7 Conclusion	59
3 Enhanced Spatial Reuse Model for Interfering WLANs.....	61
.....	V

3.1	Modeling Interfering Networks	64
	Interference Scenarios.....	64
	Properties of a Network of Interfering Links.....	66
	N-Link Network Base Model.....	67
3.2	Formulating the Optimization Problem	70
	Formulation in the Linear Space.....	70
	Formulation in the Logarithmic Space.....	71
3.3	Approaches for Solving the Optimization Problem.....	72
	Brute Force Approaches	74
	Basic Simulation of SR.....	75
	Numerical Optimization Approaches	81
	Estimating Approaches	85
3.4	Spatial Reuse Potential and Capacity.....	90
	SR System Potential.....	90
	SR System Capacity.....	91
3.5	Conclusion	92
4	Combining Spatial Division Multiplexing and Spatial Reuse for Interfering WLANs	95
4.1	SDMXBSS – A Virtual Wireless Switch.....	96
	Basic Simulation of SDMXBSS	99
	Robustness of SDMXBSS	104
4.2	Combining Spatial Division Multiplexing and Spatial Reuse	110
	Basic Simulation of SDMSR	111
4.3	Spatial Division Multiplexing Spatial Reuse Potential and Capacity.....	115
	SDMSR System Potential.....	115
	SDMSR System Capacity	116
4.4	Conclusion	116
5	Spatial Reuse Channel Access in Decentrally Organized Interfering WLANs	119
5.1	SR Performance Improvement vs. MAC Overhead.....	120
5.2	SR Information Sharing Needs	124
5.3	SR Selected Channel Access Protocol Versions.....	125
	Phase One: Sounding	125
	Phase Two, Alternative One: SR Evaluation per Link	125
	Phase Two, Alternative Two: Compete and Control	127
	Phase Two, Alternative Three: Compete and Control Data Burst.....	128
5.4	Simulation of SR Channel Access Protocol Versions	129
	Simulation of Protocol Impact without SR.....	129
	Simulation of Protocol Impact with SR	132
5.5	SDMSR Channel Access Protocol Extension.....	135
5.6	Conclusion	136
6	System Level Evaluation of Discussed Methodologies	137

6.1	Simulation Model.....	137
6.2	Simulation Platform.....	138
6.3	Simulated Scenarios.....	142
	Neighbor Houses.....	142
	Apartments One Floor.....	144
	Apartments Two Floors	145
6.4	Evaluation Scenario Neighbor Houses	147
	Throughput Evaluation	150
	Allocation Model Evaluation.....	155
	Fairness Evaluation	156
	Latency Evaluation	158
6.5	Evaluation Summary All Scenarios	160
6.6	Conclusion	162
7	Conclusion.....	165
7.1	Summary.....	165
7.2	Discussion	166
7.3	Outlook	168
	Appendix A – Basic Simulation of SR.....	171
	A.1 Additional MCS by SINR Selection Methodologies	171
	A.2 Simulation Results Additional MCS by SINR Selection Methodologies.....	173
	Appendix B – Basic Simulation of SDMSR	177
	B.1 Additional MCS by SINR Selection Methodologies	177
	B.2 Simulation Results Additional MCS by SINR Selection Methodologies.....	177
	Appendix C – System Level Evaluation.....	181
	C.1 Evaluation Scenario Apartments One Floor	181
	Throughput Evaluation	186
	Fairness Evaluation	189
	Latency Evaluation	190
	C.2 Evaluation Scenario Apartments Two Floors	191
	Throughput Evaluation	195
	Fairness Evaluation	199
	Latency Evaluation	201
	Terms and Definitions	203
	List of Abbreviations	205
	List of Symbols.....	211
	List of Figures.....	219
	List of Tables	225

Bibliography	229
Author's Publications	237
