Preface — V

1 Introduction — 1

2 Geometry and coordinate systems — 6

2.1 Coordinate systems and geometrical relationships — 6

2.1.1 Vectors — 6

2.1.2 Planes — 7

2.2 Reciprocal coordinate systems — 8

2.3 Metric tensor — 9

2.4 Coordinate transformation — 11

2.5 Application to crystal forms — 12

2.5.1 Zone axis — 14

2.5.2 Stereographic projection — 15

3 Waves — 17

3.1 Example: solution for a string fixed at both ends — 19

3.2 Electromagnetic waves — 22

3.3 Addition and subtraction of waves: interference of plane waves — 24

3.3.1 Fourier transformation — 26

3.4 The Fourier integral — 27

3.4.1 Examples — 29

3.5 Point functions in object space — 30

4 Symmetry — 35

4.1 Symmetry of finite objects — 35

4.1.1 Definitions — 35

4.1.2 Point groups — 36

4.1.3 Symmetry operations — 36

4.1.4 Groups — 37

4.1.5 Rotations, roto-reflections and roto-inversions — 37

4.1.6 Translation — 40

4.2 Symmetry elements — 41

4.2.1 Fixed points, rotation axes and reflection planes — 41

4.2.2 Reflection planes with glides and helical axes — 44

4.2.3 Graphic symbols of symmetry elements — 45

4.3 Symmetry and metric of lattices — 46

4.3.1 Symmetry elements compatible with translations — 46

4.3.2 Metric imposed by symmetry — 49

4.3.3 Point groups and space groups — 51

4.4	Classes and crystal systems —	51
4.4.1	Classes —	51
4.4.2	Group generators —	52
4.4.3	Generation of point groups —	53
4.4.4	The 32-point groups: axial groups —	55
4.4.5	The 32 crystal classes: tetrahedral and octahedral groups —	56
4.4.6	Noncrystallographic point groups —	57
4.4.7	The 11 Laue classes —	58
4.4.8	The 7 crystal systems —	59
4.4.9	International symbols of the point groups —	60
4.4.10	The Schoenflies symbols —	62
4.5	Classification of lattices —	63
4.5.1	The 14 Bravais lattices —	63
4.5.2	Holohedry and merohedry —	66
4.6	Symmetry of periodic structures —	67
4.6.1	The 17 planar groups —	67
4.6.2	Equivalent positions —	70
4.6.3	The planar group $p2mg$ —	72
4.7	The 230 space groups —	73
4.7.1	Classification of crystals according to their symmetry —	75
4.8	Crystal structures —	78
4.8.1	Miller–Bravais indices for the hexagonal lattice —	85
5	Scattering and diffraction —	86
5.1	Scattering of electromagnetic radiation by an electron —	86
5.1.1	Classic scattering from an electron (Thompson scattering) —	86
5.1.2	Polarization factor —	86
5.2	Optical lattice —	89
5.3	Scattering of light by matter —	92
5.4	Atomic model —	95
5.5	Atomic model: thermal vibrations in a material —	97
5.6	Diffraction by a periodic structure —	100
5.7	Structure factor —	102
5.7.1	Structure factors for a primitive lattice with one atom —	102
5.7.2	Structure factors for a primitive lattice with several atoms —	103
5.7.3	Structure factors for a C-centered lattice —	103
5.7.4	Structure factor for a unit cell with two different atoms —	103
5.7.5	The NaCl structure —	104
5.7.6	Example: cubic perovskite SrTiO_3 —	105
5.8	Diffraction condition —	107
5.8.1	Bragg law —	107
5.8.2	Ewald construction —	107

5.8.3	Calculation of a diffraction pattern — 109
6	X-ray physics — 111
6.1	Production of X-rays — 111
6.1.1	Laboratory X-ray sources — 111
6.1.2	Synchrotron sources — 115
6.1.3	Free electron laser — 116
6.2	Electron beam interactions with matter — 117
6.3	Monochromatization of X-rays — 122
6.4	Absorption coefficient — 123
7	Single crystal methods — 125
7.1	Single crystal diffractometer — 125
7.1.1	Orientation matrix — 129
7.1.2	Intensity measurement — 135
7.1.3	Detectors — 136
7.2	Space group determination — 143
7.2.1	Crystal system and Laue class — 143
7.2.2	Global absences, centered unit cells — 143
7.2.3	Zonal absences, glide planes — 145
7.2.4	Axial absences, helical axes — 146
7.2.5	Rotations and roto-inversions — 147
7.2.6	Deduction of the space group from the diffraction symbol — 147
7.2.7	Calculation of structure factors for a diffraction pattern — 148
8	Powder diffraction methods — 151
8.1	Introduction — 151
8.2	Debye–Scherrer camera — 154
8.2.1	Sample preparation — 156
8.3	Focusing systems — 157
8.3.1	Seemann–Bohlin camera — 157
8.3.2	Guinier camera — 158
8.4	Powder diffractometer — 160
8.4.1	Diffractometer alignment — 163
8.5	Detectors — 167
8.6	Sample preparation — 170
8.7	Texture — 171
8.8	Examples of powder diffractometer system — 172
8.9	Example of a powder diffraction pattern — 173
8.10	Indexing of a powder pattern — 176
8.11	General powder pattern indexing — 177
8.12	Calculation of a powder pattern — 180

8.13	Particle size and strain —	183
8.13.1	Particle size —	183
8.13.2	Strain —	185
8.13.3	Size and strain —	186
9	Qualitative and quantitative evaluation of powder patterns —	187
9.1	Qualitative analysis —	187
9.2	Quantitative analysis —	187
9.3	Rietveld analysis —	188
9.3.1	Background —	188
9.3.2	Profile functions —	190
9.3.3	The full width at half maximum —	192
9.3.4	Intensity calculation —	193
9.3.5	Full pattern refinement —	194
10	Structure solution methods —	200
10.1	Example of a structure solution —	200
10.2	Patterson method —	207
10.3	Direct methods —	208
10.3.1	Unitary structure factor —	210
10.3.2	Structure invariants and semiinvariants —	212
10.3.3	Phase assignment —	214
10.3.4	E-maps —	214
10.4	Charge flipping —	214
10.4.1	The charge flipping algorithm —	215
10.5	Structure completion —	217
10.6	Structure refinement —	218
10.6.1	Linear least squares —	218
10.6.2	Residuals —	222
10.7	How does it all fit together: an example —	224
11	Crystallographic information file —	233
Index —		237
