Preface *xi*

1 Historical Introduction 1

Viktor V. Zhdankin

- 1.1 Discovery of Iodine and Early Studies 1
- 1.2 Iodine Research in the Twentieth Century 2
- 1.3 Iodine Research in the Twenty-first Century 3
- 1.4 Brief History of Iodine Catalysis 3
- References 5

2 Concepts in Iodine Catalysis 11

Kazuaki Ishihara

- 2.1 Introduction 11
- 2.2 Halogen-bonding Catalysis 14
- 2.3 Iodine(I) Catalysis 15
- 2.4 Iodine(III) Catalysis 17
- 2.5 Iodine(V) Catalysis 22
- References 24

3 Catalysis by Halogen Bonding Based on Iodine 27

Revannath L. Sutar and Stefan M. Huber

- 3.1 Introduction 27
- 3.2 Catalysis by Molecular Iodine 28
- 3.3 Catalysis by Organic Halogen Bond Donors 34
- 3.4 Asymmetric Catalysis Through Halogen Bonding 50
- 3.5 Halogen Bonding as Supporting Interaction in Catalysis 53
- 3.6 Conclusion 57
- References 57

4 Catalytic Transformations with R_4NI Catalyst Precursors 69

Xiao-Xian Li and Yun-Fei Du

- 4.1 Introduction 69
- 4.2 The Construction of C–N Bond 69

4.2.1	The Synthesis of Amides	69
4.2.2	The Synthesis of Hemiaminal Ethers	73
4.2.3	The C–H Bond Amination	76
4.3	The Construction of C–O Bond	82
4.3.1	The C–O Bond Formation via Alkylarenes	82
4.3.2	Synthesis of α -Acyloxy Ketones	84
4.3.3	Synthesis of α -Acyloxy Ethers	86
4.3.4	Synthesis of Esters and Ethers	87
4.4	The Construction of C–C Bond	93
4.5	The Construction of C–S Bond	96
4.6	Cascade Bond Formation	99
4.7	The Formation of P–O/C, S–N Bond	109
4.8	Conclusion	110
	References	111

5 Catalytic Transformations Based on Iodine(I) Involving Radical Pathways 121

Alexandra E. Bosnidou and R. Martin Romero

5.1	Introduction	121
5.2	Synthesis of Iodine(I) Complexes	122
5.2.1	Synthesis via Complexation of Neutral Precursors	122
5.2.2	From Oxidation of Low-valent Iodine	123
5.2.3	Preparation of Polymer-bound Reagents	125
5.3	Reactivity	125
5.3.1	Ligand Exchange Reactions at Iodine	126
5.3.2	Radical Reactivity	127
5.4	Application in Catalysis	128
5.4.1	Amination Reactions	129
5.4.2	Oxygenation Reactions	135
5.4.3	C–F Bond Formation	139
5.4.4	β -Functionalization of Alcohols	139
5.4.5	Alkene Difunctionalization	140
5.4.6	α -Functionalization of Carbonyl Compounds	140
5.5	Conclusions	142
	References	143

6 Aromatic C–H Functionalization 151

Mahesh Puthanveedu and Andrey P. Antonchick

6.1	Introduction	151
6.2	Reactions with Stoichiometric Hypervalent Iodine Reagents	152
6.2.1	Synthesis of (Hetero)aromatic Compounds	152
6.2.1.1	Intramolecular C–N Bond Formation via Oxidative Cyclization	152
6.2.1.2	Intramolecular C–C Bond Formation via Oxidative Cyclization	156
6.2.1.3	Radical-Mediated Intramolecular Cyclization	160
6.2.2	C–H Functionalization of (Hetero)aromatic Compounds	161

6.2.2.1	Hypervalent Iodine-Mediated C–H (Hetero)arylation	162
6.2.2.2	Hypervalent Iodine-Mediated C–H Amination Reactions	164
6.2.2.3	Other Direct C–H Functionalization Reactions	166
6.3	Hypervalent Iodine-Catalyzed C–H Functionalization Reactions	171
6.3.1	Hypervalent Iodine-Catalyzed Intramolecular Cyclization Reactions	171
6.3.2	Hypervalent Iodine-Catalyzed Intermolecular Reactions	174
6.4	Conclusion	178
	References	178
7	Design of Chiral Organoiodine(I/III) Catalysts for Asymmetric Oxidative Transformations	185
	<i>Andreas Boelke and Boris J. Nachtsheim</i>	
7.1	Introduction	185
7.2	C ₁ -Symmetric Iodoarenes	187
7.2.1	Structural Features	187
7.2.2	The Influence of <i>ortho</i> -Substituents	190
7.2.3	Catalyst Synthesis – Comparison Among C ₁ -Symmetric Derivatives	193
7.3	C ₂ -Symmetric Catalysts	195
7.3.1	Structural Features	195
7.3.2	X-Ray Structure Analysis and Computational Investigations	197
7.3.3	Catalyst Synthesis – Comparison Among C ₂ -Symmetric Derivatives	201
7.4	Comparison of Catalyst Performance	202
7.5	Conclusion	204
	References	205
8	Catalytic and Asymmetric Dearomatization Reactions Employing Hypervalent Iodine Reagents	211
	<i>Toshifumi Dohi and Yasuyuki Kita</i>	
8.1	Introduction: Phenol Dearomatization	211
8.2	Asymmetric Dearomative Coupling: A Turning Point	213
8.3	Catalytic Asymmetric Dearomative Couplings	215
8.4	Further Breakthrough and Recent Advances	219
8.5	Essential Mechanistic Guide	231
8.6	Summary	233
	References	234
9	Catalytic Alkene Difunctionalization Reactions	243
	<i>John M. Ovian and Eric N. Jacobsen</i>	
9.1	Introduction	243
9.2	General Mechanistic Considerations	243
9.3	Oxyfunctionalization	244
9.4	Aminofunctionalization	252
9.5	Dihalogenation	257

9.6	Carbofunctionalization	263
9.7	Conclusion and Outlook	268
	References	269
10	Catalytic Oxidative α-Functionalization of Carbonyls	275
	<i>Muhammet Uyanik</i>	
10.1	Introduction	275
10.2	Organoiodine(III) Catalysis	277
10.3	Inorganic Iodine Catalysis	285
10.4	Conclusion	291
	References	291
11	Oxidations with Iodine(V) Compounds – From Stoichiometric Compounds to Catalysts	299
	<i>Frederic Ballaschk and Stefan F. Kirsch</i>	
11.1	Introduction to Iodine(V) Compounds	299
11.2	Iodine(V) Compounds as Stoichiometric Reagents in Organic Syntheses	300
11.2.1	Synthesis of 2-Iodoxybenzoic Acid (IBX), Dess–Martin Periodinane (DMP), and Their Derivatives	300
11.2.2	Oxidations of Alcohols with IBX, DMP, and Their Derivatives	302
11.2.3	Dehydrogenations with IBX, DMP, and Their Derivatives	303
11.2.4	Oxidative Aromatizations and Dearomatizations with IBX, DMP, and Their Derivatives	305
11.2.5	Fragmentations with IBX, DMP, and Their Derivatives	307
11.2.6	Pseudocyclic Systems and Iodylarenes	309
11.2.7	Oxidative Transformations with Pseudocyclic Systems and Iodylarenes	310
11.3	Iodine(V) Compounds as Recyclable Reagents in Organic Syntheses	311
11.4	Iodine(V) Compounds as Catalytic Reagents in Organic Syntheses	314
11.4.1	Oxidative Transformations Based on IBX, DMP, and Iodylarenes	315
11.4.2	Oxidative Transformations Based on Iodoxybenzenesulfonic Acid (IBS)	316
11.5	Conclusion	319
	References	319
12	Sustainable Methods in Hypervalent Iodine Chemistry	335
	<i>Brandon Frey, Asim Maity, Hao Tan, Pritam Roychowdhury, and David C. Powers</i>	
12.1	Introduction	335
12.2	Chemical Synthesis of Hypervalent Iodine Reagents	337
12.2.1	Synthesis of Hypervalent Iodine Reagents Using O ₂	337
12.2.1.1	Synthesis of Hypervalent Iodine(III) Reagents with O ₂	338
12.2.1.2	Synthesis of Hypervalent Iodine(V) Reagents with O ₂	340

12.2.2	Synthesis of Hypervalent Iodine Reagents with H_2O_2 or UHP	340
12.2.2.1	Synthesis of Hypervalent Iodine(III) Reagents with H_2O_2 or UHP	341
12.2.2.2	Synthesis of Hypervalent Iodine(V) Reagents from H_2O_2 or UHP	343
12.3	Electrochemical Synthesis of Hypervalent Iodine Reagents	344
12.3.1	Electrochemical Synthesis of Hypervalent Iodine(III) Reagents	345
12.3.2	Electrochemical Synthesis of Hypervalent Iodine(V) Reagents	349
12.4	Recyclable Hypervalent Iodine Reagents	349
12.4.1	Synthesis of Polymer-Supported Hypervalent Iodine(III) Reagents	350
12.4.2	Synthesis of Polymer-Supported Hypervalent Iodine(V) Reagents	350
12.4.3	Fluorous Hypervalent Iodine(III) Reagents	352
12.5	Catalytic Application of Hypervalent Iodine Compounds	354
12.5.1	Catalytic Hypervalent Iodine Reactions Using O_2	354
12.5.1.1	Catalytic Hypervalent Iodine(III) Reactions Using O_2	354
12.5.1.2	Catalytic Hypervalent Iodine(V) Reactions Using O_2	356
12.5.2	Catalytic Hypervalent Iodine Reactions Using Peracid Oxidants	357
12.5.3	Catalytic Hypervalent Iodine Reactions Using Oxone®	363
12.5.3.1	Catalytic Hypervalent Iodine(III) Reactions Using Oxone®	363
12.5.3.2	Catalytic Hypervalent Iodine(V) Reactions Using Oxone®	364
12.5.4	Catalytic Hypervalent Iodine Reactions Using Electrophilic Halides	367
12.5.4.1	Catalytic Hypervalent Iodine(III) Reactions Using Electrophilic Halides	367
12.5.5	Hypervalent Iodine Electrocatalysis	370
12.5.5.1	Catalytic Hypervalent Iodine(III) Electrocatalysis	370
12.6	Conclusion	372
	Acknowledgment	372
	References	372

13 Industrial Application of Iodine Catalysis 387

Tatsuo Kaiho

13.1	Synthetic Acetic Acid	387
13.1.1	BASF Process	388
13.1.2	Monsanto Process	390
13.1.3	Cativa Process	391
13.2	Tall Oil	393
13.3	Photoinitiator	396
13.4	Polymerization (Chain Transfer Agent, Initiator, and Catalyst)	399
13.5	Dye-Sensitized Solar Cell (DSSC)	407
13.6	Polyamide Stabilizer	409
	References	412
