

Contents

List of acronyms and abbreviations — XI

List of notions — XIII

1	Distributed ledger technologies — 1
1.1	Digital money – cryptocurrencies — 3
1.2	Blockchain — 5
1.2.1	Concept of proof of work — 11
1.2.2	Vulnerabilities of the BTC and issues handling — 13
1.2.3	Alternative platforms and cryptocurrencies based on blockchain — 17
1.3	IOTA project – tangle — 19
1.3.1	IOTA bundle — 25
1.4	Hashgraph — 27
2	Decentralized applications — 44
2.1	Decentralized trust - distribution vs. decentralization — 44
2.2	DApp triplet — 46
2.3	DL networks — 47
2.3.1	Network organization and governance — 48
2.3.1.1	Public, private, and consortium networks — 49
2.3.1.2	Permissioned and permissionless networks — 51
2.3.1.3	User and data privacy in DL networks — 53
2.3.2	Network performance — 54
2.3.2.1	Transaction throughput and latency — 55
2.3.2.2	Resource consumption — 57
2.3.2.3	Transaction costs — 58
2.3.3	Scalability — 60
2.3.3.1	Sharding — 62
2.3.3.2	Off-chain state channels — 62
2.3.3.3	Cross-chain swaps — 63
2.4	Smart contracts — 64
2.4.1	Virtual machine — 65
2.4.2	Lifecycle — 66
2.4.3	Smart contract programming — 68
2.4.3.1	Languages — 69
2.4.3.2	Tools and libraries — 70
2.4.4	Smart contract security — 72
2.4.4.1	Smart contract weakness classification — 73
2.4.4.2	Steps to securing smart contracts — 74

2.5	Off-chain applications — 77
2.5.1	Off-chain application examples — 78
2.5.1.1	Client-side web applications — 78
2.5.1.2	Web-server or embedded application parts — 80
2.5.1.3	Mobile applications — 80
2.5.2	Distributed ledger node APIs — 81
2.5.2.1	Ethereum JSON-RPC API — 81
2.5.2.2	Hyperledger Fabric REST API — 82
2.5.2.3	Hyperledger Sawtooth REST API — 82
2.6	Distributed and support services — 82
2.6.1	DL-based storage — 83
2.6.2	Oracles — 84
2.6.3	Name services — 87
2.6.4	Chain explorers — 88
2.7	Productization of DApps — 89
2.7.1	DLT and DApp ecosystems — 90
2.7.1.1	Ethereum ecosystem — 91
2.7.1.2	Hyperledger ecosystem — 92
2.7.1.3	Hedera Hashgraph ecosystem — 92
2.7.1.4	Corda ecosystem — 93
2.7.1.5	IOTA ecosystem — 94
2.7.2	Deploying and accessing blockchain networks — 94
2.7.2.1	Blockchain-as-a-service — 95
2.7.2.2	APIs interfacing public DL networks — 98
2.7.2.3	Public datasets for advanced blockchain data analytics — 99
3	Distributed ledgers and internet of things — 101
3.1	Distributed ledgers for IoT security — 103
3.1.1	Confidentiality and privacy — 104
3.1.2	Availability — 105
3.2	Data management — 106
3.3	Authentication and authorization — 107
3.3.1	Identification and device enrolment — 107
3.3.2	Authentication — 109
3.3.3	Authorization and access control — 109
3.3.3.1	Authorization models — 110
3.3.3.2	OAuth authorization architecture — 111
3.3.3.3	Decentralized authorization examples — 111
3.4	Monetization — 113
3.5	Integration schemes of internet of things and the distributed ledger — 114

- 3.5.1 Distributed ledger networks for internet of things — 115
- 3.5.2 Internet of things device architectures for DApps — 115
- 3.6 Example of an industrial internet of things DApp — 117

4 Selected use cases — 120

- 4.1 Car industry 4.0 — 121
 - 4.1.1 Car production chain — 124
 - 4.1.1.1 Supply-chain tracking — 124
 - 4.1.1.2 Synchronization of digital twins — 125
 - 4.1.1.3 Management of software versions and documents' releases — 125
 - 4.1.1.4 Multi-agent robot systems — 126
 - 4.1.2 Car features and use — 129
 - 4.1.2.1 Autonomous driving systems — 130
 - 4.1.2.2 Secure lock/unlock of vehicles — 131
 - 4.1.2.3 Car-related payments — 132
 - 4.1.2.4 Protection of mileage reading against tampering — 132
 - 4.1.2.5 Serial numbers handling – registering and management — 132
 - 4.1.2.6 Digital proof of ownership by the use of registers — 133
- 4.2 Smart mobility — 133
 - 4.2.1 Inspiring car driving in an environmentally responsible way — 133
 - 4.2.2 Parking reservation — 134
 - 4.2.3 Car and ride sharing — 134
 - 4.2.4 Traffic congestion management — 135
- 4.3 Smart energy — 135
 - 4.3.1 Smart grid conceptual model — 136
 - 4.3.2 Decentralization in the energy internet — 137
 - 4.3.2.1 Requirements for distributed ledger technologies — 139
 - 4.3.2.2 Energy web decentralized ecosystem for energy internet — 140
 - 4.3.3 Smart energy use cases — 140
 - 4.3.3.1 Distributed energy resources and peer-to-peer energy trading — 141
 - 4.3.3.2 Retail and wholesale electricity marketplaces — 142
 - 4.3.3.3 Green and environmental energy aspects — 142
 - 4.3.3.4 Energy metering, billing, and network data management — 143
