

# Contents

**Preface — VII**

**Foreword — XI**

**Use and Disclaimer — XIX**

**Glossary, Common Notations, and Abbreviations — XXI**

## **Chapter 1**

### **Motivation — 1**

- 1.1 Mission and Objectives — 2
- 1.2 Internet of Things — 6
- 1.3 Defining Characteristics of Big Datasets — 6
- 1.4 High-Dimensional Data — 7
- 1.5 Scientific Inference and Forecasting — 10
- 1.6 Data Science — 11
- 1.7 Artificial Intelligence — 12
- 1.8 Examples of Driving Motivational Challenges — 13
  - 1.8.1 Neuroimaging-Genetics — 13
  - 1.8.2 Census-Like Population Studies — 16
  - 1.8.3 4D Nucleome — 17
  - 1.8.4 Climate Change — 19
- 1.9 Problems of Time — 23
- 1.10 Definition of *Kime* — 24
- 1.11 Economic Forecasting via Spacekime Analytics — 26

## **Chapter 2**

### **Mathematics and Physics Foundations — 35**

- 2.1 Wavefunctions — 35
- 2.2 Dirac bra-ket Notation — 38
- 2.3 Operators — 42
- 2.4 Commutator — 51
  - 2.4.1 Example 1: Non-Trivial Commutator (Position/Momentum) — 53
  - 2.4.2 Example 2: Trivial Commutator (Energy/Momentum) — 54

## **Chapter 3**

### **Time Complexity — 55**

- 3.1 Introduction — 55
  - 3.1.1 Wavefunctions and the Fourier Transformation — 56
  - 3.1.2 Fourier Amplitudes and Phases — 62

|        |                                                                          |     |
|--------|--------------------------------------------------------------------------|-----|
| 3.1.3  | Phase Equivalence —                                                      | 64  |
| 3.1.4  | Amplitude Equivalence —                                                  | 65  |
| 3.1.5  | Fourier Transform Effects on Phases and Magnitudes —                     | 66  |
| 3.1.6  | Minkowski Spacetime —                                                    | 74  |
| 3.1.7  | Events —                                                                 | 75  |
| 3.1.8  | Kaluza-Klein Theory —                                                    | 75  |
| 3.1.9  | Coordinate Transformations, Covariance, Contravariance, and Invariance — | 76  |
| 3.2    | <i>Kime, Kevents and the Spacekime Metric</i> —                          | 82  |
| 3.3    | Some Problems of Time —                                                  | 85  |
| 3.4    | Kime-Solutions to Time-Problems —                                        | 86  |
| 3.5    | The Kime-Phase Problem —                                                 | 89  |
| 3.5.1  | The Effects of Kime-Magnitudes and Kime-Phases —                         | 90  |
| 3.5.2  | Strategies for Solving the Missing Kime-Phase Problem —                  | 93  |
| 3.6    | Common Use of Time —                                                     | 95  |
| 3.6.1  | Rate of Change —                                                         | 95  |
| 3.6.2  | Velocity —                                                               | 95  |
| 3.6.3  | Newton's Equations of Motion —                                           | 96  |
| 3.6.4  | Position ( $x$ ) and Momentum ( $p$ ) —                                  | 96  |
| 3.6.5  | Wavefunctions —                                                          | 97  |
| 3.6.6  | Schrödinger Equation —                                                   | 98  |
| 3.6.7  | Wave Equation —                                                          | 100 |
| 3.6.8  | Lorentz Transformation —                                                 | 100 |
| 3.6.9  | Euler-Lagrange Equation —                                                | 101 |
| 3.6.10 | Wheeler-DeWitt Equation —                                                | 102 |
| 3.7    | Analogous Kime Extensions —                                              | 103 |
| 3.7.1  | Rate of Change —                                                         | 103 |
| 3.7.2  | Kime Motion Equations —                                                  | 106 |
| 3.7.3  | Lorentz Transformation in Spacekime —                                    | 135 |
| 3.7.4  | Properties of the General Spacekime Transformations —                    | 140 |
| 3.7.5  | Backwards Motion in the Two-Dimensional Kime —                           | 143 |
| 3.7.6  | Rotations in Kime and Space Hyperplanes —                                | 146 |
| 3.7.7  | Velocity-addition Law —                                                  | 147 |
| 3.7.8  | Generalization of the Principle of Invariance of the Speed of Light —    | 148 |
| 3.7.9  | Heisenberg's Uncertainty Principle —                                     | 149 |
| 3.7.10 | 5D Spacekime Manifold Waves and the Doppler Effect —                     | 149 |
| 3.7.11 | Kime Calculus of Differentiation and Integration —                       | 152 |
| 3.8    | The Copenhagen vs. Spacekime Interpretations —                           | 157 |
| 3.9    | Space-Kime Formalism —                                                   | 165 |
| 3.9.1  | Antiparticle in Spacekime —                                              | 166 |
| 3.9.2  | The Causal Structure of Spacekime —                                      | 167 |

- 3.10 Kime Applications in Data Science — 173
- 3.11 Kime Philosophy — 177
- Appendix: Dirac Equation in Spacekime — 178

## Chapter 4

### Kime-series Modeling and Spacekime Analytics — 190

- 4.1 General Formulation of fMRI Inference — 190
- 4.2 Likelihood Based Inference — 196
- 4.3 Magnitude-Only fMRI Intensity Inference — 201
  - 4.3.1 Likelihood Ratio Test (LRT) Inference — 202
  - 4.3.2 Rician and Normal Distributions of the Magnitude — 207
  - 4.3.3 Parameter Estimation — 216
  - 4.3.4 Marginal Distribution of the Phase — 222
- 4.4 Complex-Valued fMRI Time-Series Inference — 225
- 4.5 Complex-Valued Kime-Indexed fMRI Kintensity Inference — 231
- 4.6 Spacekime Tensor-Based Linear Modeling — 234
  - 4.6.1 Tensor Representation and Basic Operations — 234
  - 4.6.2 Linear Modeling Using Tensors — 242
  - 4.6.3 Unregularized OLS Model Solutions — 244
  - 4.6.4 Regularized Linear Model Solutions — 249
- 4.7 Mapping Longitudinal Data to Kimesurfaces — 250
- 4.8 The Laplace Transform of Longitudinal Data: Analytic Duality of Time-Series and Kimesurfaces — 253
  - 4.8.1 Continuous Laplace Transform — 256
  - 4.8.2 Discrete Signal Laplace Transform — 266

## Chapter 5

### Inferential Uncertainty — 274

- 5.1 Core Definitions — 275
  - 5.1.1 Observables (Datasets) — 275
  - 5.1.2 Inference Function — 275
- 5.2 Inner Product — 282
- 5.3 Eigenspectra (Eigenvalues and Eigenfunctions) — 283
- 5.4 Uncertainty in 5D Spacekime — 284
- 5.5 Fundamental Law of Data Science Inference — 301
- 5.6 Superposition Principle — 302
- 5.7 Terminology — 304
- 5.8 Spacetime IID vs. Spacekime Sampling — 319
- 5.9 Bayesian Formulation of Spacekime Analytics — 320
- 5.10 Uncertainty in Data Science — 327
  - 5.10.1 Quantum Mechanics Formulation — 329
  - 5.10.2 Statistics Formulation — 330

## **XVIII — Contents**

|        |                                     |     |
|--------|-------------------------------------|-----|
| 5.10.3 | Decision Science Formulation —      | 331 |
| 5.10.4 | Information Theoretic Formulation — | 332 |
| 5.10.5 | Data Science Formulation —          | 356 |
|        | Appendix —                          | 358 |

## **Chapter 6**

### **Applications — 382**

|       |                                                              |     |
|-------|--------------------------------------------------------------|-----|
| 6.1   | Image Processing —                                           | 385 |
| 6.2   | fMRI Data —                                                  | 388 |
| 6.3   | Exogenous Feature Time Series Analysis —                     | 400 |
| 6.4   | Structured Big Data Analytics Case Study —                   | 406 |
| 6.5   | Spacekime Analytics of Financial Market and Economics Data — | 407 |
| 6.5.1 | Longitudinal Modeling —                                      | 414 |
| 6.5.2 | Regularized Linear Modeling —                                | 423 |
| 6.5.3 | Laplace Transform of GDP Time Series to Kimesurfaces —       | 431 |
| 6.5.4 | Dimensionality Reduction —                                   | 433 |
| 6.5.5 | Unsupervised Clustering —                                    | 434 |

## **7 Summary — 440**

## **References — 445**

## **Index — 459**
