

Contents

1	Introduction	1
1.1	Outline	2
1.2	Contributions	2
2	State of the Art in WLAN Positioning	5
2.1	WLAN Measurement Protocol	5
2.2	WLAN Positioning Based on Analytic Functions	8
2.2.1	Time Based Approaches	9
2.2.2	Angle-of-Arrival Based Approaches	10
2.2.3	Signal-Strength Based Trilateration	11
2.3	WLAN Positioning Based on Fingerprinting	14
2.3.1	Setup Phase	14
2.3.2	Positioning Phase	20
2.4	Summary and Comparison of Approaches	24
3	Basics for Azimuth and Position Estimation with WLAN	27
3.1	State of the Art in Azimuth and Position Estimation	27
3.1.1	Sensor Fusion	28
3.1.2	Azimuth and Position Estimation with WLAN	31
3.2	Multipath Propagation	33
3.3	Interference Wave Fields	37
3.4	Directional Received Signal Strength	42
3.5	Summary	47

4	DiFi: A New Snapshot WLAN Azimuth and Position Estimator	49
4.1	Assumptions	49
4.2	DiFi: Directional WLAN Fingerprinting	51
4.2.1	Setup Phase	52
4.2.2	Azimuth and Position Estimation Phase	58
4.3	Experimental Analysis and Verification of DiFi	62
4.3.1	Static Estimation Results	62
4.3.2	Dependency on the Quality of the Database	64
4.3.3	Dynamic Estimation Results	67
4.4	Antenna Diversity to Improve Estimation	72
4.5	Summary	79
5	Azimuth and Position Tracking with DiFi	81
5.1	Pedestrian Dead Reckoning	82
5.2	Grid-Based Markov Localization	84
5.2.1	Prediction Phase	86
5.2.2	Correction phase with DiFi	88
5.3	Particle Filters with a Continuous State Space	91
5.3.1	Sampling of Particles	93
5.3.2	Importance Filtering with DiFi and Resampling	95
5.4	Summary	96
6	Experimental Analysis and Verification	99
6.1	Evaluation in a Shadowing-Free Environment	99
6.2	Evaluation In- and Outside of an Office Building	101
6.3	Evaluation with Receiver Antenna Diversity	112
6.4	Summary	114
7	Summary, Conclusions and Further Research	117
7.1	Summary and Conclusions	117
7.2	Further Research	119
