

Contents

1	Introduction	1
1.1	Goals and motivation	1
1.2	Filtration	8
1.3	Collision mechanics	12
1.4	Adhesion	17
1.4.1	Analytical solutions of the van der Waals force	19
1.4.2	Asperities and deformations at contact points	21
2	Simulation model	23
2.1	Numerical description of particle-laden flow	24
2.1.1	Equations and algorithms governing the continuous phase	26
2.1.2	Equations governing the disperse phase	27
2.1.3	Immersed boundary method	27
2.2	Integration of the van der Waals interaction	34
2.2.1	Integration over two half-spaces	34
2.2.2	Force correction through local curvature	36
2.2.3	Full integration over a triangulated surface	39
2.3	Collision, agglomeration and re-entrainment	45
2.3.1	Collision forces	48
2.3.2	Agglomeration	51
2.3.3	Contacts with structures	56
2.3.4	Re-entrainment	58
2.4	Brownian motion	59
2.5	Summary	60

3	Validation and application	63
3.1	Van der Waals interaction force	63
3.1.1	Noncorrected forces	64
3.1.2	Curvature corrected forces	69
3.1.3	Full integration over a triangulated surface	74
3.1.4	Discussion of the proposed force calculations	75
3.2	Collision and agglomeration resolution	75
3.2.1	Discussion and conclusion	81
3.3	Drag coefficient for a flow around a cylinder	83
3.4	Contact rate of spherical particles on a singular fibre	87
3.5	Deposition on a singular fibre	88
3.5.1	Determination of particle rebound properties	88
3.5.2	Qualitative comparison of single fibre deposition	91
3.6	Summary	98
4	Conclusion and outlook	99
4.1	Conclusion	99
4.2	Outlook	100
	Bibliography	101
