Acknowledgements	i
List of Abbreviations	iii
Abstract	ix
Kurzzusammenfassung.....	xi
1 Introduction	1
2 Objectives	5
3 Theoretical Considerations	7
3.1 Basic Considerations.....	7
3.2 Photoinduced Electron Transfer	9
3.3 Energy Transfer.....	13
3.4 Triphenylamine	17
3.5 Porphyrins as Pyrrolic Macrocycles and Chromophores .	19
3.6 Fullerenes as Carbon Nanostructures.....	23
3.7 Semiconducting Materials.....	26
3.7.1 NiO as p-type Semiconductor Material in DSSCs	26
3.7.2 Brief Introduction to Black TiO ₂ Nanoparticles in Photocatalytic Water Splitting.....	29
3.8 Experimental Methods and Analysis Techniques	33
3.8.1 Pulse Radiolysis.....	33
3.8.2 Time Resolved Femtosecond and Nanosecond Transient Absorption Spectroscopy	35
3.8.3 Multiwavelength Analysis Technique – the Glotaran program	37

4 Results and Discussion	43
 4.1 Fundamental Characterization of New Carbon Rich Materials – Development of New Electron Donor-Acceptor Systems	43
4.1.1 Controlling and Fine-Tuning Charge Transfer Emission in 2,6-Dicyanoaniline Multichromophores Prepared through Domino Reactions: Entry to a Potentially New Class of OLEDs	43
 4.2 Supramolecular and Covalent Architectures for Solar Energy Conversion – From Principle to Application	53
4.2.1 Interfacing Tetrapyridyl-C ₆₀ with Porphyrin Dimers via π-Conjugated Bridges: Artificial Photosynthetic Systems with Ultrafast Charge Separation.....	53
4.2.2 Controlling the Charge Transfer Mechanism and Efficiency by Means of Different C ₇₀ Regiosomeric Adducts.....	58
4.2.3 Effect of the Triazole Ring in Zinc Porphyrin-Fullerene Dyads on the Charge Transfer Processes in NiO-Based Devices	64
 4.3 Progress in Photocatalytic Water Splitting Using TiO₂ – The Rise of the Sustainable Hydrogen Economy	72
4.3.1 Long-Living Holes in Grey Anatase TiO ₂ Enable Noble-Metal-Free and Sacrificial-Agent-Free Water Splitting.....	72
5 Conclusion	79
6 Prospective	85
Bibliography	87
Appendix.....	103
A Conference Contributions	103
B List of Publications	104
