Acknowledgements — VII

Preface — IX

- 1.1 Intent — IX
- 1.2 Wherefrom; why; audience — IX
- 2.1 An explain book — X
- 2.2 *Gedankenexperiment* — XI
- 2.3 Ink analysis — XII
- 2.4 View of science — XIII
- 3.1 Not encyclopaedic — XIII
- 3.2 SI and CAS — XIII
- 4.1 Bias — XIV
- 4.2 Accuracy attempted — XVI
- 4.3 Additional bias — XVII
- 5 Acknowledgements — XVII
- Notes — XVIII

About the author — XXXIX

Chapter 1

Science and law — 1

- 1.1 Forensic science — 1
 - 1.1.1 Truth — 1
 - 1.1.2 Forensic science — 2
- 1.2 Who decides — 4
- 1.3 Justice and failed justice — 5
- 1.4 Legal systems — 7
 - 1.4.1 Structure — 7
 - 1.4.2 Categories of law mainly considered here — 8
 - 1.4.3 Some other categories – for mention here — 10
- 1.5 The law of evidence — 20
 - 1.5.1 Evidence in court — 20
 - 1.5.2 Forensic expert witnesses — 21
- 1.6 Legislative process – policy making — 23
- 1.7 Advocacy — 24
 - 1.7.1 Lawyers — 24
 - 1.7.2 Forensic scientists — 24
 - 1.7.3 Dual rôle — 25
 - 1.7.4 Who talks to whom — 25

1.8	US <i>Qui tam</i> —	26
1.9	Toxicology —	27
1.9.1	Acute, chronic, latent —	27
1.9.2	Evaluation: LD ₅₀ —	28
1.9.3	Workplace health, exposure limits —	29
1.10	Hazards of found chemicals —	30
	Notes —	30

Chapter 2

Essential concepts of forensic science — 57

2.1	Essential concepts and propositions —	57
2.1.1	Essential concepts and propositions. Locard's principle —	57
2.1.2	Forensic chemistry defined —	58
2.1.3	Analytical chemistry —	59
2.1.4	Science and chemistry —	61
2.1.5	Science – good, bad and junk —	62
2.2	Forensics – recent historical —	63
2.3	The essential propositions expanded —	64
2.3.1	What it is —	64
2.3.2	How much —	68
2.3.3	Error —	69
2.3.4	When —	69
2.3.5	What happened —	69
	Notes —	70

Chapter 3

Analytical approach — 93

3.1	Analytical chemistry —	93
3.1.1	Measurement —	93
3.1.2	What the measurement means —	94
3.1.3	Counting measurement —	95
3.1.4	Changed circumstances —	95
3.2	The things of evidential interest —	96
3.3	What forensic aspects to concentrate on —	97
3.4	Sample handling —	98
3.5	Site and lab work —	100
3.5.1	Initial observations —	100
3.5.2	Sample selection —	101
3.5.3	Sample selection – Pb in humans —	103
3.5.4	Screening tests —	104
3.5.5	Analytical/instrumental methods —	104
3.6	Forensic conclusions —	106

3.7	Analysis too extensive – too sensitive – or not enough? —	107
3.7.1	Too extensive? —	107
3.7.2	Too sensitive? —	108
3.7.3	Summary —	109
	Notes —	110

Chapter 4

Uniqueness of matter — 125

4.1	Uniqueness of matter & chemical science —	125
4.1.1	Questions about the uniqueness of matter —	125
4.1.2	Chemical science —	126
4.2	Atoms, molecules, . . . —	126
4.2.1	Atoms, molecules, . . . – Hierarchy —	126
4.2.2	Energy relationships —	128
4.2.3	Periodic table —	129
4.3	Molecules, <i>etc.</i> —	130
4.4	Molecular structure —	130
4.5	Subtle variations, <i>etc.</i> —	133
4.5.1	Isomers, congeners, <i>etc.</i> —	133
4.5.2	Chirality —	134
4.5.3	Isotopes —	137
4.5.4	Polymers —	137
4.5.5	Hydration of the chemical substance —	138
4.5.6	Moisture content of the whole package: $\text{CH}_3\text{-CH}_2\text{-OH}$ —	138
4.5.7	Halide ions that balance charge —	139
4.5.8	Virus mutations —	140
4.5.9	Sampling plan —	140
4.5.10	Forensic chemistry choices —	140
4.6	Chemical names – CAS —	141
4.7	Identification of a molecule by its characteristics —	144
4.8	Mixtures – <i>mixture profile</i> —	145
4.8.1	<i>Mixture profile</i> – glycol example —	146
4.8.2	Occurrence probability – DNA; fingerprints —	148
4.8.3	Occurrence probability – ink example —	148
4.9	Reactions in progress —	150
	Notes —	151

Chapter 5

Site and lab procedure, and documentation — 173

5.1	To try to assure credibility – lab practices, <i>etc.</i> —	173
5.2	Site, lab, and samples —	173
5.2.1	Site examination —	173

5.2.2	General lab set-up —	177
5.2.3	Integrity of sample and analysis process —	177
5.3	Documentation —	178
5.3.1	Lab's core documents and standard operating procedures —	178
5.3.2	The scientific literature —	180
5.3.3	Tags and receipts —	181
5.3.4	Lab notebook —	182
5.3.5	Reference documents —	186
5.3.6	Spectra and other instrumental print-outs —	187
5.3.7	Report —	187
5.3.8	Quality —	187
5.3.9	Publication or other public access —	187
5.3.10	Record and sample retention —	188
5.3.11	Security —	189
5.4	Lab organization —	189
5.4.1	Legal/budgetary —	189
5.4.2	Organization and leadership responsibility —	190
5.4.3	Personnel – scientific qualification —	191
5.5	Ethics —	192
5.6	Quality assurance —	192
5.7	Other responsibilities —	192
5.7.1	Environmental: waste management —	192
5.7.2	Workplace health and safety —	193
5.7.3	Hazard communication: WHMIS —	193
5.7.4	Labour relations and employment rights —	193
5.7.5	Consumer protection —	193
5.8	Transparency and opaqueness of government and other institutional process – secrecy —	194
5.8.1	Confidential <i>verses</i> public —	194
5.8.2	Temporary allowance —	195
5.8.3	Manhattan Engineer District —	195
	Notes —	197

Chapter 6

Analysis, instrumentation and methods — 217

6.1	Introduction —	217
6.1.1	Fundamentals – essential concepts —	217
6.2	Most important & commonly used methods —	219
6.3	UV = Ultraviolet-visible spectroscopy —	219
6.3.1	Theory —	219
6.3.2	To identify molecules – limited —	225
6.3.3	Instrumentation —	226

6.3.4	Concentration measurements —	228
6.4	IR = Infrared spectroscopy —	228
6.4.1	Theory —	229
6.4.2	To identify molecules – almost uniquely —	229
6.4.3	Instrumentation —	230
6.4.4	Concentration measurements —	231
6.5	TLC = Thin layer chromatography —	231
6.5.1	Theory —	231
6.5.2	To identify molecules – limited —	232
6.5.3	Set-up —	232
6.6	GC = Gas chromatography —	233
6.6.1	Theory —	233
6.6.2	To identify molecules – limited —	234
6.6.3	Set-up —	234
6.6.4	Quantity measurement —	235
6.7	MS = Mass spectroscopy —	235
6.7.1	Theory —	235
6.7.2	To identify molecules – almost uniquely —	238
6.7.3	Instrumentation —	239
6.8	GC-MS = gas chromatography-mass spectroscopy —	239
6.9	HPLC = high-performance liquid chromatography —	241
6.10	Other methods (alphabetically). —	241
6.11	Atomic absorption and emission spectroscopy —	241
6.12	Boiling and melting point determination: temperature measurement to assist in identifying molecules —	242
6.13	Centrifugal force measurement —	243
6.14	Carbon dioxide CO ₂ measurement —	243
6.15	Dogs —	243
6.16	Electron microscopy —	244
6.17	Electrophoresis: DNA analysis —	244
6.18	Electron spin resonance —	245
6.19	Fluorescence and phosphorescence spectroscopy —	246
6.19.1	Theory —	246
6.19.2	To identify molecules – limited —	248
6.19.3	Instrumentation —	248
6.19.4	Application to forensic science —	250
6.20	Length measurement – tire skid —	250
6.21	Metal detection —	251
6.22	Microscopy – optical and photomicroscopy —	251
6.23	Microwave spectroscopy —	251
6.24	Neutron activation analysis —	251
6.25	NMR = nuclear magnetic resonance —	252

6.26	Photography — 252
6.27	Radar location of things — 255
6.28	Radioactivity — 255
6.29	Radiofrequency tags — 256
6.30	Raman spectroscopy — 256
6.31	Refractive index — 256
6.32	Reflectance & colour — 257
6.32.1	Reflectance spectroscopy — 257
6.32.2	Visible light colour — 259
6.33	Thermoluminescence analysis — 259
6.34	Viscosity measurement — 260
6.35	Wet chemistry – screening tests — 260
6.36	X-ray crystallography — 260
	Notes — 261

Chapter 7

When — 295

7.1	When – time: chemical kinetics — 295
7.2	Fundamentals of chemical kinetic theory — 296
7.3	Carbon-14 dating — 297
7.4	About complex systems – empirically — 301
7.4.1	Age of bread — 301
7.4.2	Pathology of time of death — 301
7.5	Examples — 302
7.6	Chemical markers of when (other than chemical kinetics) — 303
7.7	Other than chemical markers of when — 303
7.8	Error — 304
	Notes — 304

Chapter 8

Error — 313

8.1	Error – qualitative and quantitative — 313
8.2	Kinds of error – Systematic errors – bias — 314
8.3	Kinds of error – Statistical errors – random — 315
8.4	If theory is wrong or method insufficient — 322
8.4.1	If theory is wrong — 322
8.4.2	If method is insufficient — 322
8.5	Graphical representation — 322
8.5.1	Cartesian — 322
8.5.2	Straight line: $y = m \times x + b$ — 324
8.5.3	Error representation — 325
8.5.4	Further about graphical representation — 326

8.6	Blunder — 328
8.7	Ethical issues — 328
8.7.1	Ethics — 328
8.7.2	Ethics and economy — 330
8.7.3	Ethical issues – forensic personnel — 331
8.7.4	Ethical behaviour of the state — 332
8.8	Fraud — 332
8.9	Near-fraud — 333
8.10	How to try to limit and cope with error — 333
8.10.1	Error control — 333
8.11	Quality assurance — 334
8.11.1	Introduction — 334
8.11.2	ISO 9002. ISO/IEC 17025:2005 — 334
8.11.3	Public — 335
8.11.4	Peer review — 337
8.11.5	Audits and scrutiny — 337
8.11.6	Accreditation — 337
8.11.7	Document trail — 338
8.11.8	Method validation — 338
8.12	Replication and multiple-blind check samples — 338
8.13	Some general advice — 341
8.14	Critical appraisal – <i>nullius in verba</i> — 342
	Notes — 342

Chapter 9

Report — 363

9.1	Report — 363
9.2	Title, . . . — 368
9.3	Abstract — 370
9.4	Contents outline — 370
9.5	Problem to be addressed: blind? — 371
9.6	Re Theory of the human story being investigated — 372
9.7	Science theory — 372
9.8	Items for analysis — 372
9.9	Equipment and reagents — 373
9.10	Analysis — 373
9.11	Error statement — 374
9.12	SOPs, etc. — 375
9.13	Conclusion — 375
9.14	Quality assurance — 377
9.15	Environmental and workplace health and safety — 377

- 9.16 Legal and disclaimer — **377**
- 9.17 Control of distribution: public document? Confidential? Freedom of information — **378**
- 9.18 Data archival — **379**
- 9.19 Finance. US *Qui tam* — **379**
- 9.20 Clarity and quality of writing — **379**
- 9.21 Language — **380**
- 9.22 Format & Short form — **380**
- 9.22.1 Format — **380**
- 9.22.2 Short form — **380**
- Notes — **382**

Chapter 10

Essay – biased opinion – polemic. Canada *Controlled Drugs & Substances Act* – *ipse dixit* — 401

- 10.1 War on drugs — **402**
- 10.2 Quest for a *proper scientific report* — **403**
- 10.3 Bad science – *ipse dixit* — **406**
- 10.4 ISO out of compliance? & Catch-22 — **408**
- 10.4.1 ISO out of compliance? — **408**
- 10.4.2 Catch-22 — **408**
- 10.5 Unethical science — **409**
- 10.6 Lawyers, judges and parliamentarians — **410**
- 10.7 Recommendations. Repeal *CD&S Act* s.51 because it is anti-science. Do not allow Catch-22 — **410**
- Appendix: A law case — **412**
- Notes — **419**

Chapter 11

Essay – biased opinion – polemic. Canada *Criminal Code* – driving impaired by drug – science? — 435

- 11.1 Forensic question — **435**
- 11.2 Newly enforced law — **436**
- 11.2.1 – pre-pandemic — **436**
- 11.2.2 – now-pandemic — **437**
- 11.3 Science literature — **437**
- 11.4 How to determine «ability to drive» and «impairment»? — **438**
- 11.5 Bad science — **439**
- 11.6 DRE opinion — **440**
- 11.7 Result of the DRE opinion — **441**
- 11.8 Criticisms of the DRE process — **442**

11.9	Parliament and government, and bad science – a tradition —	443
11.10	Most-serious policy issues —	444
	Appendix: A court pleading —	445
	Notes —	451

Index —	469
