Introduction	3
Outline of the thesis	8
1. Open quantum systems, semiclassical methods and the emergence of classicality	11
1.1. Closed systems	11
1.1.1. Amplitudes and the van Vleck-Gutzwiller propagator	11
1.1.2. Density matrix approach	16
1.2. Open systems	19
1.2.1. Spin environment and decoherence	20
1.2.2. The Caldeira-Leggett model	25
1.2.3. Semiclassical approximation to the Caldeira-Leggett model	30
1.3. Summary	36
2. Strong coupling and non-Markovian effects in the statistical notion of temperature	37
2.1. Introduction	37
2.2. The statistical emergence of temperature from a saddle-point condition	39
2.3. Finite-coupling regime	42
2.4. Microcanonical thermodynamic relations and ensemble equivalence	48
2.5. Summary	50
3. Semiclassical treatment of decoherence in chaotic systems	51
3.1. Classical chaos and Sieber-Richter orbit pairs	51
3.1.1. Action difference and density of trajectories	54
3.2. Interplay between coherent and incoherent effects in chaotic systems	58
3.2.1. Decoherence in the Caldeira-Leggett model	59
3.2.2. Particle in a chaotic cavity and quantum survival probability	61
3.2.3. Semiclassical treatment	62
3.3. Summary	70
4. Semiclassical analysis of an open Bose-Hubbard model	73
4.1. Amplitude: boundary conditions, and time-reversal invariance	74
4.2. Density matrix and dissipative equations of motion	76
4.3. System coupled to a microcanonical environment	80
4.4. Summary	83

Contents

5. Semiclassical analysis of work statistics	85
5.1. Classical relations	85
5.2. Quantum relations	90
5.3. Path integral and quantum work	95
5.4. Semiclassical analysis of the characteristic function of work	96
5.5. Path integral quantum work of a system coupled to an environment	98
5.6. Summary	103
Summary and outlook	105
A. Equations of motion based on the influence functional symmetries	109
B. Environment autocorrelation function for complex arguments	111
Bibliography	115
Acknowledgments	125
