

CHAPTER 01	12 — 23	Introduction
	14	1.1 Evaluating design heritage and design methods to discover new formats of design engineering in education and industries – is 'design theory' a method?
	20	1.2 Five ways to read this book
	21	1.3 Questioning the systems: education, creative and economic systems
CHAPTER 02	24 — 37	Industrial Design Engineering in the past: Industrial demands and design schools' heritages
	26	2.1.1 German industrial design made in Brunswick' – a less than ordinary and transdisciplinary approach and the question about training-worthy fields for industrial designers
	29	2.1.2 A historical perspective on the industrial design heritage of the Braunschweig University of Art – should it be considered 'design science'?
	34	2.1.3 Challenges: German and international provocations in Industrial Design
	36	2.2 A 'contract' for cultural education – the political willingness
IMAGES 01	38 — 75	Industrial Designer of HBK Braunschweig: Design success today

CHAPTER 03	76 — 101		The design term 'textile engineering', the significance of sustainable design drivers and the 'design shift'
	78	3.1	The driving forces of (textile) culture: 'Textile engineering' in history and German industrial design – a transdisciplinary look at working conditions, industrial changes and people's sources of identification (3.1.1. – 3.1.6)
	92	3.2	Driver of sustainable (industrial) design culture – the 'design shift'
	92	3.2.1	What does high-quality product design mean?
	98	3.2.2	The correlation between design and engineering
	99	3.2.3	The design turnaround, the digital revolution and de-industrialisation: How will the design shift impact design education?
PRELIMINARY APPRAISAL 01	102 — 103		Common and differing characteristics in product and textile design engineering – the business of 'industrial design' in the past and the 'design shift'
IMAGES 02	104 — 131		Textile design drivers', Textile Engineers' success today
CHAPTER 04	132 — 154		Education research in practise – comparing sustainable design studies and 'learning landscapes of togetherness' in Europe
	134	4.1	Collaborative non-hierarchical design engineering and management workshops – pan European workshops in Germany

	139	4.2	The method of 'material-based design thinking' with the aim of 'materializing immateriality' – a pan European workshop in Great Britain
	145	4.3	The European design engineering driving range – Learning lessons for a tangible, non-hierarchical education space towards material and immaterial togetherness (a collaboration between M.-E. Wachs, and A. Hall) (4.3.1 – 4.3.5)
PRELIMINARY APPRAISAL 02	155 — 157		The best Design Engineering models for Europe's future – providing resilient economic and educational benefits by 'forming' fine arts and making the future tangible
CHAPTER 05	158 — 173		Business models in design education and their entrepreneurial power – yesterday's future
	160	5.1	The entrepreneurial power of design schools – the past and future drivers of industry business models (5.1.1 – 5.1.4)
	170	5.2	Sustainable thinking in design education AND design engineering industry: the next academic and business models and the 'Management of Knowledge'
CHAPTER 06	174 — 207		Our aim to build and use cultural intelligence, using creativity to create ethical and holistical education landscapes
	176	6.1	The 'flow' in design – an extreme super power for working conditions or simply wishful thinking? (6.1.1 – 6.1.6)

	188	6.2	Virtual Interactive Design (VID) – shaping digital and ethically correct spaces for creativity and its benefits to stakeholders (6.2.1 – 6.2.3)
	197	6.3	In consideration of a holistic design engineering education – integrated cultural intelligence (6.3.1 – 6.3.5)
IMAGES 03	208 — 245		International creative perspectives – ideating future together International Guest Statements
CHAPTER 07	246 — 267		'Sketching' sustainable future together in a hands-on, non-hierarchical and holistic design engineering education culture – cherishing playgrounds for art and design engineering heritage by using 'Knowledge Banks'
	248	7.1	A position paper for interacting and integrating systems in sustainable design engineering and design education – state-of-the-art, holistic, non-hierarchical and interdisciplinary learning
	255	7.2	Rethinking design systems and codes
	261	7.3	E-Valuating European design memory by using a 'Knowledge Bank' – research responsibility in Ethics, E-technology, Education (the big 3 E's for cultural education and economy)
	265	7.4	Design Engineering – sustainable and holistic: education as 'industry' – a place for education and to remember!
EPILOGUE	268 — 269
