

Contents

1	Abstract of the Book: System Efficiency by Renewable Electricity	1
1.1	Energy Demand, Potential and Resources	1
1.2	Energy Economy of Efficiency and Sufficiency	5
1.3	Storage Technologies	6
1.4	Distribution and Transmission Grid	7
1.5	Decentralized Energy Supply	7
1.6	Buildings and Heating Demand	9
1.7	Sustainable Mobility	9
1.8	Sector Coupling	10
2	Energy Demand, Potential and Resources	13
2.1	Development of Energy Demand	13
2.2	Development Goals of Renewable Energy Supply	16
2.3	Potential of Renewable Energy	19
2.3.1	Limits of Potential	19
2.3.2	Wind Energy	20
2.3.3	Photovoltaics	22
2.3.4	Hydropower	25
2.3.5	Biomass	27
2.4	Significance of Biomass in Renewable Energy Supply	31
2.5	Summary	32
	References	33
3	Energy Economy of the Efficiency	35
3.1	Development of Generating Costs and Grid Tariffs Until 2050	35
3.2	Photovoltaics and the Public Ownership Model (POM)	39
3.3	Efficiency and Affordability	40
3.4	Energy Economic Assessment of Efficiency	42
3.5	Contracting	45
3.6	Efficiency Measures and Monitoring	46
3.7	The Rebound Effect	49
3.8	Gray Energy and Energy-Payback-Time	50
3.9	Analysis and Monitoring of Energy Efficiency	51

3.10	Energy Management	55
3.11	Summary	56
	References	57
4	Efficiency and Sufficiency	59
4.1	Importance of Efficiency	59
4.2	Generation Efficiency	59
4.3	Usage Efficiency	64
4.4	Operational Efficiency	65
4.5	Resource Efficiency	65
4.6	Life Cycle Analysis (LCA)	66
4.7	Harvest Factor and Harvest Time in Relation to Grey Energy	67
4.7.1	Definitions	67
4.7.2	Harvest Factor of Generation Plants	68
4.7.3	Harvest Factor of End-Use Devices	70
4.8	Energy Payback Time (Energy Amortization Time)	71
4.9	Sufficiency and Affordability	72
4.10	Summary	74
	References	75
5	Efficiency of Storage Technologies	77
5.1	Storage Technologies	77
5.2	Tasks of Storages	78
5.3	Pumped Storage Technology	80
5.3.1	Change in Pumped Storages for Regenerative Energy Supply	80
5.3.2	Energy Economy of Pumped Storage in a Renewable Environment	83
5.4	Compressed Air Storage	87
5.5	Comparison of Storage Technologies	89
5.6	Accumulators	90
5.7	Load Leveling with Storage Capacities	94
5.8	Peak Load Avoidance (Peak Shaving)	97
5.9	Summary	98
	References	99
6	Efficiency of Grids	101
6.1	Tasks of the Electricity Networks	101
6.2	Theory of Line Transmission	103
6.3	Operating Behavior of Overhead Lines	105
6.4	Operating Behavior of Cables	108
6.4.1	Technical Properties of Cables	108
6.4.2	Thermal Operating Behavior of Cables	108
6.4.3	Properties of Medium Voltage and High Voltage Cables	112

6.4.4	Dynamic Operating Behavior of Cables	116
6.5	Connection of Wind Farms in the High and Extra-High Voltage Grid	120
6.6	Safety and Reliability of Overhead Lines and Cables	123
6.7	Energy Economy of Grids	125
6.7.1	Approval Procedure and Environmental Impact Assessment.	125
6.7.2	Energy Economic Analysis of Security of Supply.	126
6.7.3	Energy Economic Analysis of Congestion Management.	128
6.8	Summary	130
	References.	130
7	Efficiency of the Decentralized Energy Supply	133
7.1	Challenges of Sustainable Energy Supply	133
7.2	Decentralized Supply Concepts	134
7.2.1	Smart Grid	134
7.2.2	Micro Grid and Decentralized Energy Cells	135
7.2.3	Vertical Grid Usage and Traditional Electricity Market	136
7.2.4	Horizontal Grid Usage and Smart Market and Micro Market	139
7.3	Efficiency of Decentralized Energy Cells	140
7.3.1	Efficiency Strategy of the Decentralized Energy Supply	140
7.3.2	Possible Coverage Rate of Decentralized Energy Supply	141
7.4	Generation Efficiency Through Coupling of Regions	144
7.5	Self-Generation and Coverage Rate in the Distribution Grid with PV.	146
7.6	Sustainable Electric Mobility in the Distribution Grid	149
7.7	Sustainable Supply Strategy in the Distribution Grid	152
7.8	Future of Decentralized Grid Services.	156
7.9	Summary	157
	References.	158
8	Efficiency of Buildings and Heating Demand.	159
8.1	Residential Building Stock by Efficiency Classes	159
8.2	Energy Demand of Buildings.	162
8.3	Heating Energy Demand	163
8.4	Heating Costs and Electricity Demand	165
8.4.1	Monovalent and Bivalent Gas Heating with Solar Thermal Energy	165
8.4.2	Heat Pumps: Theory and Designs	166
8.4.3	Design of Heat Pumps for Space Heating	170

8.5	Heat Pumps for Room Cooling	173
8.6	Direct and Storage Heating	173
8.7	Future Requirements for Storage Heating	176
8.8	Efficiency Potentials and Cost-Effectiveness of Heating Systems	179
8.8.1	Annual Costs of Heat Pump Types in Comparison	179
8.8.2	Electrical Direct and Storage Heating	180
8.8.3	Electricity Demand of Heat Pumps and Direct Heating.....	181
8.9	Efficiency Potential for Space Heating by 2050	182
8.10	Summary	185
	References.....	185
9	Efficiency of Mobility	187
9.1	Characteristics of Road Traffic.....	187
9.2	Types of Electric Vehicles	189
9.3	Energy Demand of Vehicles.....	190
9.4	Driving resistance example	193
9.5	Energy Demand and Range of Electric Vehicles	194
9.6	Comparison of Electric and Combustion Drives	197
9.7	New European Driving Cycle and WLTP Cycle	198
9.8	Mobility Needs in Urban and Rural Areas.....	200
9.9	Efficiency Potential in the Transport Sector.....	203
9.9.1	Efficiency Through Technology.....	203
9.9.2	Efficiency Through Organization and Digitization	205
9.9.3	Efficiency Through User Behavior	207
9.10	Summary	207
	References.....	208
10	Efficiency Through Sector Coupling	209
10.1	Sector Coupling	209
10.2	Heating Sector – Power-To-Heat	211
10.3	Gas Sector – Power-To-Gas	216
10.4	Mobility Sector—Power-To-Mobility	217
10.5	Potentials of Sector Coupling.....	220
10.6	Energy Economy of Sector Coupling	222
10.7	Summary	223
	References.....	223
11	Options for Action	225
11.1	Options for Action for Building Efficiency	225
11.2	Options for Action for Efficient Mobility	226
11.3	Options for Action in Industry and Commerce	226
11.4	Options for Action in the Household	226

11.5	Options for Action for Regenerative Generation	227
11.5.1	Wind Energy	227
11.5.2	Photovoltaics	227
11.5.3	Hydropower and Pumped Storage	227
11.5.4	Biomass	228
11.6	Options for action in Energy Grids	228
11.7	Human Factors	228
