Preface	xiv
Contributors	xv
1 Anatomy of the Fracture	1
<i>Simon MacLean, Gregory Bain</i>	
1.1 Introduction	1
1.2 Microanatomy of the Distal Radius: A Feat of Evolutionary Engineering	1
1.2.1 The Subchondral Bone Plate: the "Leaf Spring" of the Wrist	1
1.2.2 The Arch Bridge Concept	2
1.2.3 Multiple Rings Concept of the Wrist	2
1.3 The Role of the Carpal Ligaments	3
1.4 Fracture Initiation and Propagation	5
1.5 Scapholunate Dissociation and Two-Part Fractures of the Distal Radius	5
1.6 Volar Marginal Rim Fractures	7
1.7 A Biomechanical Model for Distal Radius Fracture	10
1.8 Summary	10
References	11
2 Radiology of the Fractured Radius	12
<i>Mark Ross, Patrick Groarke</i>	
2.1 Introduction	12
2.2 Plain Radiographs	12
2.2.1 Injury (Prereduction) Radiographs	12
2.2.2 Postreduction Radiographs	13
2.2.3 Parameters Can Change with Time	13
2.2.4 Radiograph of the Opposite Side	13
2.2.5 Posteroanterior View	13
2.2.6 Lateral View	14
2.3 Plain Radiographic Parameters	15
2.3.1 Posteroanterior View	15
2.3.2 Lateral View	17
2.4 Effect of Wrist Position on Carpal Indices	19
2.5 Reproducibility of Indices	19
2.6 Effect of Lateral Inclination on Volar Tilt ...	19
2.7 Intra-articular Components	20
2.8 Are the Parameters Reproducible?	21
2.9 Determination of Stability of Fracture Pattern and Adequacy of Reduction	22
2.9.1 Extra-articular Stability	22
2.9.2 Intra-articular Reduction	22
2.10 Other Signs on Radiographs	22
2.11 Frequency of Radiographic Assessment	23
2.12 Classification of Distal Radius Fractures	23
2.13 Computed Tomography	23
2.13.1 Sagittal Computed Tomography	23
2.13.2 Coronal Computed Tomography	23
2.13.3 Axial Computed Tomography	25
2.13.4 Computed Tomography and DRUJ Stability	25
2.13.5 Three-Dimensional Reconstructions	25
2.14 Magnetic Resonance Imaging and Distal Radius Fractures	26
2.15 Summary	26
2.15.1 Plain Radiographs	26
2.15.2 Computed Tomography Scans	26
2.15.3 Magnetic Resonance Imaging Scans	27
References	27

3	Patient–Accident–Fracture Classification of Acute Distal Radius Fractures in Adults	29
	<i>Guillaume Herzberg, Thais Galissard, Marion Burnier</i>	
3.1	Introduction	29
3.2	Material and Methods	29
3.2.1	Patient	29
3.2.2	Accident	29
3.2.3	Fracture	29
3.3	Results and Discussion	30
3.3.1	Patients 1–1 (Dependent, Minimal Functional Needs) with AO Type “A” or “C” Fractures	30
3.3.2	Patients 2–2 (Independent Patients with Comorbidities, Intermediate Functional Needs) with AO Type “A” Extra-articular Fractures	31
3.3.3	Patients 2–2 (Independent Patients with Comorbidities, Intermediate Functional Needs) with AO Type “C” Intra-articular Fractures	31
3.3.4	Patients 3–3 (Patient with Normal General Health Status and Maximal Functional Needs) with AO Type “A” Extra-articular Fractures	31
3.3.5	Patients 3–3 (Patient with Normal General Health Status and Maximal Functional Needs) with AO Type “C” Intra-articular Fractures	31
3.3.6	Patients 3–3 (Patient with Normal General Health Status and Maximal Functional Needs) with AO Type “B” Partial Articular Fractures	32
3.4	Conclusion	32
	References	32
4	Distal Radius Fracture: The Evidence	33
	<i>Tracy Webber, Tamara D. Rozental</i>	
4.1	Introduction	33
4.2	Methods	33
4.3	Nonoperative Fracture Treatment	33
4.4	Surgery versus Immobilization for Displaced Distal Radius Fracture	33
4.5	The Management of Elderly Patients	34
4.6	Operative Treatment for Displaced Distal Radius Fracture: Method of Fixation	34
4.6.1	Bridging versus Nonbridging External Fixation	34
4.6.2	Closed Reduction Percutaneous Pinning versus Open Reduction Internal Fixation	35
4.6.3	Closed Reduction Percutaneous Pinning versus External Fixation	35
4.6.4	Open Reduction Internal Fixation versus External Fixation	35
4.6.5	Implant Type	36
4.6.6	Management of the Pronator Quadratus	36
4.7	Postoperative Rehabilitation	36
4.8	Management of Complications	36
4.9	Treatment for Osteoporosis	36
4.10	Conclusion	37
	References	37
5	Orthopaedic Treatment: When?	39
	<i>David Warwick, Oliver Townsend</i>	
5.1	When the Evidence and Benefits of Nonoperative Treatment Have Been Considered	39
5.1.1	Why Surgery Is Not Usually Needed	39
5.1.2	Nonoperative Treatment Is Usually Effective	39
5.1.3	Surgery Carries Risk	39
5.1.4	Risks of Nonoperative Intervention	40
5.2	When the Literature Recommendations Have Been Considered	40
5.2.1	Drawbacks of the Literature	40
5.2.2	Authors’ Recommendations	40
5.2.3	Consensus Review	40
5.3	When Age Has Been Considered	40
5.3.1	Older Age	40
5.3.2	Younger Age	41
5.4	When There Is a Predictable Risk of Poor Outcome	41
5.4.1	Exclusion Bias	41
5.4.2	Distal Radioulnar Joint Incongruity	41
5.4.3	Adaptive Midcarpal Malalignment	41
5.4.4	Positive Ulnar Variance	41
5.4.5	Fracture Dislocation	41

5.5	When There Is a Predictable Risk of Instability	42	5.8.3	Personalized Treatment	43
5.5.1	Instability	42	5.9	When the Patient Prefers to Have Urgent Surgery that May Not Be Needed rather than Wait for a Corrective Osteotomy	43
5.5.2	Prediction of Instability	42	5.9.1	Natural History of Recovery after Distal Radius Fracture	43
5.6	When There Is a Predictable Risk of Symptomatic Arthritis	42	5.9.2	Managing Uncertainty	44
5.6.1	Does Arthritis Really Matter in the Hand and Wrist?	42	5.9.3	Rescuing a Wrong Decision with Corrective Osteotomy	44
5.6.2	How Often Does a Hand Surgeon Actually See Arthritis after a Distal Radius Fracture?	42	5.10	When the Patient Wants Early Return of Function	44
5.6.3	Literature Evidence	42	5.11	When Cost-Benefit Analysis Supports Surgery	45
5.7	When the Appropriate Method Is Available	43	5.12	Conclusion	45
5.8	When the Patient Understands the Options and the Risks	43	References		45
5.8.1	The Patient's Rights	43			
5.8.2	Honest Consent	43			
6	Is There a Role for External Fixation with or without Kirschner Wires?	48			
	<i>Frédéric Schuind</i>				
6.1	Introduction	48	6.6	Results	52
6.2	Indications and Contraindications	48	6.7	Conclusion	53
6.3	Surgical Techniques	48	References		54
6.4	Prevention of Redisplacement	51			
6.5	Prevention of Other Complications of External Fixation	51			
7	Volar Locking Plates: Basic Concepts	56			
	<i>Hermann Krimmer</i>				
7.1	Introduction	56	7.4	Surgical Technique	58
7.2	Locking Mechanisms	56	7.5	Pitfalls	61
7.3	Indications	57	7.5.1	Tendon Ruptures	61
7.3.1	Plate Design and Plate Position	57	7.5.2	Secondary Subsidence	61
7.3.2	Fracture-Specific Plate Selection	57	References		61
8	Intramedullary Devices	62			
	<i>Stephanie Malliaris, Scott Wolfe</i>				
8.1	Introduction	62	8.6	T-Pin: Outcomes	67
8.2	Indications	63	8.7	Distal Radius System Intramedullary Cage: Surgical Technique	67
8.3	Intramedullary Nail: Surgical Technique	64	8.8	Distal Radius System Intramedullary Cage: Outcomes	68
8.4	Intramedullary Nail: Outcomes	64			
8.5	T-Pin: Surgical Technique	66			

8.9	Pitfalls and Contraindications	69	References	70
8.10	Conclusion	69		
9	Mini Approaches	71		
	<i>Gustavo Mantovani Ruggiero</i>			
9.1	Introduction	71	9.5	Evolution of Distal Radius Fractures
9.2	Volar Minimally Invasive Plate Osteosynthesis History	71		Minimally Invasive Plate Osteosynthesis ...
9.3	Indications	73	9.5.1	Special Plates
9.4	Surgical Technique	75	9.6	Results, Clinical Examples, and Unusual Minimally Invasive Plate Osteosynthesis Cases
9.4.1	Single Longitudinal Incision	75		79
9.4.2	Transverse Incision.....	76	9.7	Pitfalls and Contraindications
				80
			9.8	Conclusions
				82
				References
				82
10	Spanning Plates	84		
	<i>Mitchell G. Eichhorn, Scott G. Edwards</i>			
10.1	Introduction	84	10.4	Results
10.2	Indications	85		91
10.3	Surgical Technique	85	10.5	Pitfalls and Contraindications
10.3.1	Third Metacarpal Technique.....	87		92
10.3.2	Second Metacarpal Technique.....	90	10.6	Conclusion
				93
				References
				93
11	Arthroscopic Management	95		
	<i>Yukio Abe</i>			
11.1	Introduction	95	11.4	Results
11.2	Indications	95		100
11.3	Surgical Technique	95	11.4.1	The Advantages of Wrist Arthroscopy
11.3.1	Preoperative Planning.....	95		100
11.3.2	Preparation and Patient Positioning	95	11.4.2	Outcomes
11.3.3	Surgical Approach	96		102
11.3.4	Postoperative Care	100	11.5	Complications
				102
			11.6	Conclusion
				102
				References
