

Contents

Standard planes (front cover flap)	
Physical principles	
Image generation, sound transmission, reflection	8
Echogenicity, frequency ranges	9
Operation and features of ultrasound units	10
Selection of ultrasound units, types of transducers	11
New techniques	
Panoramic imaging, 3D, Clarify Vascular Enhancement	12
Harmonic imaging, phase inversion,	13
Contrast agents	14
Ultrasound CT	15
Pulse compression, precision upsampling	16
Diagnostic ultrasound catheter	17
Artifacts	
Reverberation, section thickness, acoustic enhancement	18
Acoustic shadowing, mirror-image artifacts	19
Side-lobe artifact, quiz for assessing progress	20
Practical tips and tricks for the beginner	21
Lesson 1	
Retroperitoneum, Sagittal plane	
Anatomy	24
Upper retroperitoneum, normal findings	25
Lower retroperitoneum, normal findings	26
Aortic aneurysm	27
Right heart failure	29
Quiz	30
Lesson 2	
Retroperitoneum, Transverse Plane	
Anatomy	32
Normal findings	33
Age-related echogenicity	34
Acute pancreatitis, chronic pancreatitis	35
Pancreatic tumors	36
Retroperitoneal lymph nodes	37
Quiz	38
Lesson 3	
Porta Hepatis, Gallbladder, Biliary Tract	
Anatomy	40
Porta hepatis	
Normal findings	41
Portal hypertension	42
Portal vein thrombosis, lymph nodes	43
Gallbladder	
Cholecystitis	44
Differential diagnosis of cholecystitis	45
Gallstones	46
Gallbladder polyps, cholestasis	47
Biliary tract	48
Lesson 4	
Liver	
Anatomy of the segments of the liver	50
Sagittal plane, organ size, lateral angle	51
Transverse plane, hepatic veins	52
Right heart failure	
Normal variants, fatty liver	53
Focal fatty infiltration, focal sparing in fatty infiltration	54
Cysts, echinococcosis (CE)	55
Echinococcosis (CE), hepatic hemangiomas	56
Focal nodular hyperplasia (FNH)	57
Cirrhosis of the liver	58
Hepatocellular carcinomas, liver abscesses	59
Liver metastases, hypervascular metastases	60
Hypovascularized liver metastases	61
Quiz	62
Lesson 5	
Kidneys, Adrenal Glands, Renal Transplants, Spleen	
Anatomy of the kidneys and adrenal glands	64
Normal findings	65
Normal variants, renal cysts	66
Kidney degeneration, nephritis	67
Urinary obstruction	68
Differential Diagnosis of Urinary Obstruction	69
Renal calculi, renal infarction	70
Benign renal tumors, malignant renal tumors, adrenal tumors	71
Normal findings	72
Determining the size of a renal transplant, lymphoceles	73
Spleen	
Anatomy, examination technique	74
Spleen size, splenomegaly	75
Splenomegaly, splenic infarcts, practical suggestion	76
Lymphomatous infiltration, splenic hematomas, hyperechoic lesions, splenic cysts	77
Quiz	78
Lesson 6	
Thyroid Gland, Lymph Nodes, Gastrointestinal Tract	
Anatomy, volumetric measurements, normal values	80
Normal findings	81
Goiter	82
Focal solid nodules, thyroiditis	83
Lymph nodes	
Neck: lymph nodes	84
Differential diagnostic criteria, perfusion parameters	85
Differential diagnostic criteria, reactive inflammatory	86
Retroperitoneal lymph nodes	87
Gastrointestinal tract	
Anatomy, wall layers	88
Gastric tumors	89
Crohn's disease	90
Intestinal intussusception, hernias, contrast enema	91
Wall thickening, diarrhea, appendicitis	92
Fecal impaction, colitis, colon carcinoma	93
Diverticulitis	94
Quiz	95

Lesson 7

Bladder and Reproductive Organs

Anatomy	98
Bladder	
Examination technique, determining postvoiding residual bladder volume	99
Indwelling catheter and differential diagnosis of cystitis, wall thickening, internal echoes and sedimentation, ureteral peristalsis	100
Reproductive organs	
Prostate and testis	101
Undescended testis, orchitis, hydrocele	102
Endovaginal ultrasound, image orientation	103
Uterus: normal findings	104
Uterine tumors	105
Ovaries: volume, menstrual cycle phases	106
Ovarian cysts and tumors	107
Pregnancy testing	108
Placenta position and gender determination	109
Quiz	110

Lesson 8

FAST, eFAST, Lung, FAST algorithm	
eFAST algorithm	112
Seashore sign, barcode sign	114
Lung mobility, pulmonary pulse	115
Lung point in pneumothorax	116
Pleura	117
Quantifying pleural effusions	
Pleuritis, empyema, mesothelioma	118
Ribs	119
Costal fractures, costal metastases	
Lung	120
Pneumonia, pulmonary infarct, bronchial carcinoma	121
Quiz	122

Lesson 9

Pediatrics

Skull and central nervous system

Anatomy of the CSF spaces	124
Normal findings in the sagittal plane	125
Normal variants	126
Normal findings in the coronal plane	127
Cerebral hemorrhage	129
Hydrocephalus	130
Spinal canal	131

Hip

Preparation and positioning	132
Normal findings	133
Setup and measurement errors	134
Graf's classification of Infant Hips	135

Kidneys, Bladder, Spleen

Kidneys in newborns	136
Diffusely increased echogenicity, nephrocalcinosis	137
Urinary obstruction and reflux	138
Urinary obstruction, voiding cystourethrogram	139
Renal and adrenal tumors	140
Urachus, ureterocele, spleen size	141

Gastrointestinal tract

Pyloric hypertrophy, reflux, Hirschsprung's disease	142
---	-----
