Part I Methodology

1	Introduction	3
1.1	Basic Concepts	3
1.2	Preliminary Examples	4
1.2.1	Vanilla Interest-Rate Swap	4
1.2.2	Cancellable Swap	5
1.2.3	Managing Credit Risk—Collateral, Credit Default Swap	8
1.3	Why Compute Counterparty Credit Exposure?	10
1.4	Modelling Counterparty Credit Exposure	10
1.4.1	Definition	10
1.4.2	Risk Measures	12
1.4.3	Netting and Aggregation	12
1.4.4	Close-Out Risk	13
1.4.5	Right-Way/Wrong-Way Exposure	14
1.4.6	Credit Valuation Adjustment: CVA	14
1.4.7	A Simple Credit Quantification Example	15
1.4.8	Computing Credit Exposure by Simulation	17
1.4.9	Implementation Challenges	18
1.4.10	An Alternative Approach: The AMC Algorithm	19
1.5	Which Architecture?	20
1.6	What Next?	21
2	Modelling Framework	23
2.1	Counterparty Credit Exposure Definition	23
2.2	Process Dynamics	26
2.3	Interest Rate: Single Currency	27
2.3.1	Simple Specifications	29
2.3.2	HJM Framework	31
2.3.3	Libor Market Models	32
2.4	Multiple Currencies and Foreign Exchange	33
2.5	Inflation	37

2.6	Equity	37
2.7	Credit	38
2.7.1	Default Probabilities from par CDS Spreads	39
2.7.2	Stochastic Default Probabilities	41
2.7.3	Loss Simulation	42
3	Simulation Models	45
3.1	Interest-Rate Models	45
3.1.1	Separable Volatility	46
3.1.2	Example: Hull-White (Extended Vasicek)	50
3.2	Equity and FX Models	52
3.2.1	Black Model	53
3.2.2	Local Volatility	54
3.2.3	Stochastic Volatility	58
3.2.4	Jump Models	60
3.2.5	Extension to Stochastic Interest Rates	60
3.2.6	A Simpler Approach: Independent Interest Rates	63
3.2.7	Different Models for Different Markets	63
3.3	Credit Models	65
3.3.1	Simulation of Single-Name Default Probabilities and Default Times	66
3.3.2	Inter-Name Default Dependence	69
3.3.3	Technical Note: Recursion	72
3.3.4	Properties of the Loss Distribution: Large Homogeneous Portfolio	73
3.3.5	Calibration of Correlation	75
3.4	Choice of Model	75
4	Valuation and Sensitivities	79
4.1	American Monte Carlo: Mathematical Notation and Description	80
4.1.1	Mathematical Formulation	80
4.1.2	Practical Examples	83
4.1.3	Backward Induction Algorithm	85
4.2	AMC Estimation Algorithms	88
4.2.1	Tilley's Algorithm	88
4.2.2	Longstaff-Schwartz Regression	89
4.2.3	Biases of Estimates	90
4.2.4	An AMC Algorithm to Compute Credit Exposure	91
4.3	Post-Processing of the Price Distribution	93
4.4	Practical Examples Revisited	93
4.5	Computing Price Sensitivities	94
4.5.1	The Classical Approach	95
4.5.2	Price Sensitivities through Regression	95
4.5.3	Removing Correlation	96
4.6	Extensions	98

Part II Architecture and Implementation

5	Computational Framework	101
5.1	AMC Implementation and Trade Representation	101
5.1.1	Examples	102
5.1.2	Expression Trees	103
5.2	A Portfolio Aggregation Language	103
5.2.1	PAL Examples	105
5.3	The Concept of Scenarios	108
5.4	The Concept of Super-Product	108
5.4.1	An Example of Super-Products: The C-CDS	109
6	Implementation	111
6.1	Spot and Forward Statistics	111
6.1.1	Libor Rates and Bond Prices	112
6.1.2	Annuity	113
6.1.3	Swap Rate	113
6.2	Path Dependent Statistics	114
6.2.1	Extremum	114
6.2.2	Average	115
6.2.3	In Range Fraction	116
6.2.4	Credit Loss	116
6.3	Monte Carlo Stepping	117
6.4	Technical Notes	120
6.4.1	SDE Integration Schemes	120
6.4.2	Milstein 2 Scheme	121
6.4.3	Martingale Interpolation	122
6.4.4	Distribution of Maxima and Minima	123
6.5	Error Analysis	125
6.5.1	Choice of Model: Scenario and Exposure Analysis	125
6.5.2	AMC Error	129
6.5.3	Numerical Errors	130
6.5.4	Approximations: Arbitrage Conditions	131
7	Architecture	135
7.1	Requirements	136
7.1.1	Functional, Non-Functional Requirements, and Design Principles	136
7.2	Conceptual View: Methodology	137
7.3	Logical View	139
7.3.1	Portfolio Manager Components	139
7.3.2	State of the World Components	141
7.3.3	Quantification Components	141
7.4	Physical View	142
7.5	Alternative Approaches	144

Part III Products

8	Interest-Rate Products	149
8.1	Interest-Rate Swaps	149
8.1.1	Swaps in Advance and in Arrears	150
8.1.2	Capped and Floored Swaps	152
8.1.3	Cancellable Swaps	152
8.1.4	Cross-Currency Swaps	153
8.2	Constant-Maturity Swaps and Steepeners	154
8.3	Range Accruals	155
8.4	Interest-Rate Options	156
9	Equity, Commodity, Inflation and FX Products	159
9.1	Forwards and Options	159
9.1.1	Forwards Contracts	160
9.1.2	Vanilla and Digital Options	162
9.1.3	Bermudan and American Options	162
9.1.4	Asian Options	164
9.1.5	Barrier Options	164
9.2	Asset Swaps	166
9.2.1	Absolute Return Swaps	166
9.2.2	Relative Return Swaps	167
9.2.3	Cliquets	168
9.2.4	Target Redemption Swaps	169
10	Credit Derivatives	171
10.1	Credit Default Swaps	171
10.2	Collateral Debt Obligations	172
11	Structures	175
11.1	Sinking Funds	175
11.2	Accelerated Share Re-Purchase	176
11.3	Callable Daily Accrual Notes	178
11.4	Call Spread Overlays	179

Part IV Hedging and Managing Counterparty Risk

12	Counterparty Risk Aggregation and Risk Mitigation	183
12.1	Risk Measures	184
12.2	Choice of Measure	186
12.3	Portfolio Risk Aggregation	187
12.3.1	Reference Currency	188
12.3.2	Netting and No-Netting Agreements	188
12.3.3	Break Clauses	189
12.4	Collateral Agreements	190
12.4.1	Counterparty Exposure of Collateralised Counterparties	191

12.4.2	Examples	192
12.5	Close-Out Risk	194
12.6	Risk Allocation	195
12.6.1	Naive Allocation	196
12.6.2	Euler Allocation	196
12.6.3	Comparison with Naive Allocation	197
12.6.4	Contribution Calculation of Collateralised Transactions	199
13	Combining Market and Credit Risk	201
13.1	Change of Measure: Practical Implementation	202
13.2	Exposure under Real-World Measure	203
13.3	Stress Testing	204
13.4	Right-Way/Wrong-Way Exposure	205
13.4.1	Right-Way/Wrong-Way Exposure: Merton Approach	206
13.4.2	The Inverse Problem	209
13.4.3	Example 1: Call Option on Stock	210
13.4.4	Example 2: Call Put Structure on Oil	212
13.4.5	Example 3: Cross-Currency Swap on USD-GBP	212
13.4.6	Comparison with the Change of Measure Approach	212
14	Pricing Counterparty Credit Risk	215
14.1	Credit Valuation Adjustment and Static Hedging	216
14.2	Contingent Credit Default Swap	217
14.2.1	American Monte Carlo Valuation	218
14.2.2	Example	218
14.3	Dynamic Hedging of Counterparty Risk	219
14.4	Optimal Static Hedging	220
14.5	CVA Sensitivities	221
14.6	Collateral Agreements	223
14.7	Right-Way/Wrong-Way Risk	224
14.8	Examples	224
14.8.1	C-CDS on a Vanilla Interest-Rate Swap	224
14.8.2	Impact of Discretization Schedule	225
14.8.3	Collateralised Equity Swap	226
14.9	Case Study	226
	Concluding Remarks	231
A	Approximations	233
A.1	Maximum Likely Exposure	233
A.1.1	MLE of Equity and FX Products	233
A.1.2	MLE of Swaps	234
A.2	Expected Positive Exposure	235
A.2.1	EPE and CVA of Equity Options	235
A.2.2	Relation between MLE, EPE	235
A.3	CVA of Swaps	236

B	Results from Stochastic Calculus and Finance	239
B.1	Brownian Motion and Martingales	239
B.2	Replication of Contingent Claims: Martingale Representation	241
B.3	Change of Numeraire	243
	References	245
	Index	249
