Preface xv

1	Conjugated Polymer Donors for Organic Solar Cells	1
	<i>Xiaopeng Xu, Xiyue Yuan, Qunping Fan, Chunhui Duan, Maojie Zhang, and Qiang Peng</i>	
1.1	Introduction	1
1.2	LBG Polymers	3
1.2.1	LBG Polymers Based on Benzothiadiazole (BT)	3
1.2.2	LBG Polymers Based on Isoindigo (IID)	8
1.2.3	LBG Polymers Based on Diketopyrrolopyrrole (DPP)	14
1.3	MBG Polymers	19
1.3.1	MBG Polymers Based on Benzothiadiazole (BT)	22
1.3.2	MBG Polymers Based on Quinoxaline (Qx)	31
1.3.3	MBG Polymers Based on Thienopyrrolodione (TPD)	35
1.3.4	MBG Polymers Based on Thieno[3,4- <i>b</i>]thiophene (TT)	40
1.4	WBG Polymers	46
1.4.1	WBG Polymers Based on Polythiophene (PT) Derivatives	46
1.4.2	WBG Polymers Based on Benzodithiophene- <i>alt</i> -Thiophene Derivatives	49
1.4.3	WBG Polymers Based on Benzothiadiazole (BT) Derivatives	50
1.4.4	WBG Polymers Based on Benzotriazole (BTA) Derivatives	53
1.4.5	WBG Polymers Based on Thiazole, Pyrazine, and Their Derivatives Containing <i>N</i> -Heterocycles	56
1.4.6	WBG Polymers Based on Benzodithiophene-4,8-dione (BDD) Derivatives	62
1.4.7	Other WBG Polymers	65
1.5	Summary and Outlook	69
	References	69
2	<i>p</i>-Type Molecular Photovoltaic Materials	77
	<i>Qihui Yue and Xiaozhang Zhu</i>	
2.1	Introduction	77
2.2	<i>p</i> -Type Molecular Photovoltaic Materials Used in Vacuum-Deposited Solar Cells	78

2.2.1	Oligothiophene-Based Molecular Donors	79
2.2.2	D-A-A'-Type Molecular Donors	80
2.2.3	Borondipyrromethenes-Based Molecular Donors	83
2.2.4	Other Molecular Donors	85
2.3	<i>p</i> -Type Molecular Photovoltaic Materials Used in Solution-Processed Solar Cells	88
2.3.1	A-D-A-Type Molecular Donors	89
2.3.1.1	Oligothiophene-Based A-D-A-Type Molecular Donors	89
2.3.1.2	Benzodithiophene-Based A-D-A-Type Molecular Donors	90
2.3.1.3	Dithienosilole-Based A-D-A-Type Molecular Donors	95
2.3.1.4	Dithienopyrrole-Based A-D-A-Type Molecular Donors	96
2.3.2	D1-A-D2-A-D1-Type Molecular Donors	96
2.3.2.1	Dithienosilole-Based D1-A-D2-A-D1-Type Molecular Donors	99
2.3.2.2	Benzodithiophene-Based D1-A-D2-A-D1-Type Molecular Donors	101
2.3.2.3	Indacenodithiophene-Based D1-A-D2-A-D1-Type Molecular Donors	103
2.3.3	Porphyrin-Based Molecular Donors	105
2.3.4	Other Molecular Donors	107
2.4	Current Progress on Small-Molecule Solar Cells with Nonfullerene Acceptors	110
2.4.1	Binary Solar Cells	111
2.4.2	Ternary Solar Cells	112
2.5	Summary and Outlook	114
	References	115

3 Fullerene Acceptors 121

Zuo Xiao

3.1	Introduction	121
3.2	Fullerene Acceptors for Organic Solar Cells	123
3.2.1	Pristine Fullerenes	123
3.2.2	Fullerene Monoadducts	126
3.2.2.1	[2+1] Addition Derivatives	126
3.2.2.2	[2+2] Addition Derivatives	129
3.2.2.3	[2+3] Addition Derivatives	129
3.2.2.4	[2+4] Addition Derivatives	130
3.2.2.5	1,4-Addition Derivatives	130
3.2.3	Fullerene Bisadducts	130
3.2.4	Fullerene Multiadducts	135
3.2.5	Unconventional Fullerenes	136
3.3	Summary	138
	References	139

4 Non-fullerene Small-Molecule Acceptors for Organic Solar Cells 145

Wei Gao, Jun Yuan, Zhenghui Luo, Jinru Cao, Weihua Tang, Yingping Zou, and Chuluo Yang

4.1	Molecular Design Principles	145
-----	-----------------------------	-----

4.2	PDI-Based SMAs	146
4.2.1	PDI Monomers	146
4.2.2	PDI Dimers	147
4.2.3	PDI Trimers	150
4.2.4	PDI Tetramers	153
4.3	A–D–A-Type SMAs	160
4.3.1	Side Chains Optimization	160
4.3.2	End Groups Engineering	164
4.3.3	Core Units Engineering	167
4.3.3.1	IDTT and Its Derivations	167
4.3.3.2	Spacer Unit Effects	176
4.3.3.3	Asymmetric Cores	184
4.3.3.4	Non-fused Cores	194
4.4	A–DA'D–A-Type SMAs	200
4.4.1	BTA-Based A–DA'D–A SMAs	201
4.4.2	BT-Based A–DA'D–A SMAs	204
4.4.3	BSe- and Qx-Based OSCs	209
	References	210
5	Electron-Donating Ladder-Type Heteroacenes for Photovoltaic Applications: From Polymer Donor Materials to Small-Molecule Acceptor Materials	215
	<i>Qisheng Tu, Yunlong Ma, and Qingdong Zheng</i>	
5.1	Introduction	215
5.2	D–A Copolymers Based on Ladder-Type Heteroacenes	217
5.2.1	Pentacyclic and Hexacyclic Heteroacenes-Based D–A Copolymers	217
5.2.2	Heptacene-Based D–A Copolymers	219
5.2.3	D–A Copolymers Based on Heteroacenes with Nine or More Fused Rings	222
5.3	A–D–A NFAs Based on Ladder-Type Heteroacenes	223
5.3.1	A–D–A NFAs Based on Heteropentacenes and Heterohexacenes	224
5.3.2	A–D–A NFAs Based on Heteroheptacenes	226
5.3.2.1	NFAs Based on Heteroheptacenes with sp^3 -Hybridized Bridging Atoms	226
5.3.2.2	NFAs Based on Heteroheptacenes Without sp^3 -Hybridized Bridging Atoms	231
5.3.3	A–D–A NFAs Based on Heteroacenes with Eight or More Fused Rings	233
5.3.4	Other NFAs	235
5.4	Conclusions and Outlook	236
	References	237
6	Chlorinated Organic Solar Cells	241
	<i>Hui Chen, Mingrui Pu, and Feng He</i>	
6.1	Introduction	241
6.2	Chlorination Versus Fluorination: A Comprehensive Study	242

6.2.1	Synthesis	242
6.2.2	The Manipulation of Energy Level and Absorption	244
6.2.3	The Steric Hindrance and Morphology	245
6.2.4	The Synergistic Effect of Chlorination and Fluorination	246
6.3	Recent Advances in Chlorinated Semiconductors	249
6.3.1	Chlorination on the Donor Units of Polymer Donors	249
6.3.1.1	Chlorination of the Donor Units in Backbone of Polymer Donors	249
6.3.1.2	Chlorination of the Donor Units in Side Chain of Polymer Donors	250
6.3.2	Chlorination on the Acceptor Units of Polymer Donors	255
6.3.3	Chlorination of the π -Bridge of the Polymer Donors	258
6.3.4	Chlorinated Small Molecular Donors	260
6.3.5	Chlorinated Small Molecular Acceptors	260
6.3.5.1	Photovoltaic Performance of Chlorinated Small Molecular Acceptors	262
6.3.5.2	The Investigation of the Crystal Structure of Chlorinated Small Molecular Acceptors	266
6.3.5.3	The Semitransparent Organic Solar Cells Based on Chlorinated Small Molecular Acceptors	268
6.4	Conclusion and Outlook	269
	References	270

7 Polymer–Polymer Solar Cells: Materials, Device, and Stability 275

Jianyu Yuan, Huiliang Sun, Yingjian Yu, Wanli Ma, Xugang Guo, and Jun Liu

7.1	Introduction	275
7.2	The Device Structure and Basic Principles of All-PSCs	277
7.3	Materials Design Toward Efficient All-PSCs	278
7.3.1	Progress of N2200 and Its Derivative-Based All-PSCs	278
7.3.1.1	Molecular Design Strategy for N2200 Derivatives	279
7.3.1.2	Molecular Design Strategy for PDI Polymers	283
7.3.1.3	Molecular Design Strategy for BTI Polymers	283
7.3.1.4	BTI Polymers for High-Performance All-PSCs with Small E_{loss}	287
7.3.2	Progress of Polymer Acceptors Containing B $\leftarrow$ N Unit	289
7.3.2.1	Principle of B $\leftarrow$ N Unit	289
7.3.2.2	Electron-Deficient Building Blocks Based on B $\leftarrow$ N Unit	289
7.3.2.3	Optimizing E_{LUMO}	292
7.3.2.4	Tuning Absorption Spectra	294
7.3.2.5	Enhancing Electron Mobility	295
7.3.2.6	Optimizing Active Layer Morphology	297
7.3.3	Progress of Polymer Acceptors Bearing Cyano Groups	299
7.4	Device Performance and Stability of All-PSCs	303
7.4.1	Morphology Optimization and Device Engineering	303
7.4.2	The Enhanced Stability of All-PSCs	307
7.4.2.1	Thermal Stability	307

7.4.2.2	Ambient Stability	308
7.4.2.3	Mechanical Stability	308
7.4.2.4	Photostability	309
7.5	Conclusion and Outlook	310
	References	310
8	Organic Solar Cells with High Open-Circuit Voltage >1 V	313
	<i>Ailing Tang, Yuze Lin, and Erjun Zhou</i>	
8.1	Introduction	313
8.2	n-Type Small-Molecule Acceptors	315
8.2.1	Fullerene-Based SMAs	315
8.2.2	Non-fullerene SMAs	317
8.2.2.1	PDI-Based SMAs	317
8.2.2.2	IC and Its Derivatives-Based A–D–A-Type SMAs	319
8.2.2.3	A ₂ -A ₁ -D-A ₁ -A ₂ -Type SMAs with BT as A ₁ Units	322
8.2.2.4	A ₂ -A ₁ -D-A ₁ -A ₂ -Type SMAs with BTA or Qx as A ₁ Units	325
8.3	n-Type Polymers	328
8.4	Conclusion and Outlook	330
	References	331
9	Single-Component Organic Solar Cells	335
	<i>Guitao Feng, Yiting Guo, and Weiwei Li</i>	
9.1	Introduction	335
9.2	Single-Component Conjugated Materials for SCOSCs	336
9.2.1	Molecular Dyads	336
9.2.1.1	Fullerene-Based “In-Chain” Molecular Dyads	336
9.2.1.2	Fullerene-Based “Side-Chain” D–A Molecular Dyads	339
9.2.1.3	PBI-Based Molecular Dyads	341
9.2.2	Block Copolymers	345
9.2.3	Double-Cable Conjugated Polymers	350
9.3	Morphological Studies of the Photo-Active Layers in the SCOSCs	361
9.3.1	Morphological Studies of the Molecular Dyads in SCOSCs	362
9.3.2	Morphological Studies of the Block Copolymers in SCOSCs	366
9.3.3	Morphological Studies of the Double-Cable Polymers in SCOSCs	367
9.4	Perspective and Challenges of SCOSCs	375
	References	377
10	Tandem Organic Solar Cells: Recent Progress and Challenge	381
	<i>Lingxian Meng, Xiangjian Wan, and Yongsheng Chen</i>	
10.1	Introduction	381
10.2	Active Layer Materials in Tandem OSCs	383
10.2.1	Tandem OSCs Based on Fullerene Acceptors	384
10.2.2	Tandem OSCs Based on Non-fullerene Acceptors	393

10.3	Interconnecting Layer Materials	397
10.4	The Semi-Empirical Analysis of Tandem OSCs	398
10.5	Conclusion and Outlook	400
	Acknowledgments	401
	References	401
11	Large-Area Flexible Organic Solar Cells	405
	<i>Shaorong Huang, Yufei Wang, Lintao Hou, and Lie Chen</i>	
11.1	Introduction	405
11.2	Material Requirements for Large-Area Flexible Organic Solar Cells	406
11.2.1	Fullerene-Based Binary System	406
11.2.2	Non-fullerene-Based Binary System	410
11.2.3	Ternary System	413
11.2.4	All-Polymer-Based System	415
11.2.5	Design Strategies of the Materials for Large-Area Devices	417
11.3	Flexible Electrodes and Substrates	417
11.3.1	Flexible Substrates	418
11.3.2	Flexible Transparent Electrode Designs	419
11.3.2.1	Conducting Polymers	419
11.3.2.2	Carbon Nanotubes	423
11.3.2.3	Graphene	426
11.3.2.4	Metallic Nanowires	429
11.3.2.5	Hybrid Films	432
11.4	Large-Area Flexible Device Fabrication	434
11.4.1	Coating and Printing Methods	435
11.4.1.1	Blade Coating	436
11.4.1.2	Slot-Die Coating	438
11.4.1.3	Inkjet Printing	440
11.4.1.4	Spray Coating	441
11.4.1.5	Screen Printing, Relief Printing, and Gravure Printing	442
11.4.2	R2R Methodology	443
11.5	Efficiency Loss in Large-Area Devices and Modules	445
11.5.1	Electrical Loss	446
11.5.2	Geometric Loss	447
11.5.3	Optical Loss	448
11.5.4	Additional Loss	448
11.5.5	Modular Designs	448

15 Operational Stability and Built-in Potential in Organic Solar Cells 555

Weixia Lan, Bo Wu, and Furong Zhu

15.1	Introduction	555
15.2	Bimolecular Recombination in Organic Solar Cells	557
15.2.1	Effect of Metal Oxide Interlayer on Cell Performance	557
15.2.2	Charge Recombination Processes in Organic Solar Cells	560
15.2.3	Bias-Dependent Charge Collection	564
15.3	Metal/Organic Interfacial Exciton Dissociation in Organic Solar Cells	565
15.3.1	Charge Collection in Regular Configuration Organic Solar Cells	566
15.3.2	Charge Collection in Inverted Organic Solar Cells	569
15.4	Improvement of Charge Collection and Performance Reproducibility	571
15.4.1	Effect of Metal Oxide Interlayer on Cell Performance	571
15.4.2	Suppression of ZnO Sub-Gap States	574
15.5	Effect of Built-in Potential on Stability of Organic Solar Cells	579
15.5.1	Interlayer Modification	580
15.5.2	Built-in Potential in Organic Solar Cells	582
15.5.3	Stability of Organic Solar Cells	584
15.6	Summary	587
	Acknowledgment	587
	References	587

16 Voltage Losses and Charge Transfer States in Donor–Acceptor Organic Solar Cells 591

Hongbo Wu, Mengyang Li, Zaifei Ma, and Zheng Tang

16.1	The Origin of V_{oc} of Solar Cells	591
16.1.1	Voltage Loss in an Ideal Solar Cell and the Upper Limit for V_{oc}	591
16.1.2	V_{oc} and Voltage Loss in Non-ideal Solar Cells	594
16.2	V_{oc} of Organic Solar Cells	596
16.2.1	Charge Transfer States in Organic Solar Cells	596
16.2.2	Relation Between CT State and V_{oc} of Organic Solar Cells	597
16.2.3	Determining Factors of K_r and K_{nr} for Organic Solar Cells	601
16.2.4	Experimental Determination of CT State-Related Parameters	604
16.3	Strategies to Reduce V_{nr} and V_r in Organic Solar Cells	606
16.4	Summary	609
	Acknowledgments	610
