

Contents

1 Entrance	1
1.1 The Difference: Mathematical Truth Through Proof—Statistical Approximation to Truth Through Experiments	2
2 Limits of Symmetric Variance	5
2.1 Science/Earthquake Observation	6
2.2 Statistics/Stochastics—Probabilistics	6
2.3 Extended Principle	7
2.4 Considerations of Quotations According to the Bibliography	8
2.5 Explanation of the author	9
2.6 Symmetry	9
2.7 In Stochastic Systems (Logarithmic Distribution Forms)	10
3 Association with Asymmetry and Steepness (Kurtosis)	13
3.1 Parabolic, Logarithmic Distributions	13
3.2 Right and Left Skew, Steep Density Distributions	13
3.3 In Stochastic Systems (Logarithmic Distribution Forms)	15
3.3.1 In Stochastic Systems (Logarithmic and Normally Distributed, Symmetrical Distributions)	15
3.3.2 In Stochastic Systems (Logarithmic and Skewed, Asymmetrical Distributions)	15
3.3.3 In Stochastic Systems (Logarithmic and Skewed, Steep Asymmetrical Distributions)	16
4 Presentation of the Logarithmic Equal Distribution, Eqbl	21
4.1 Development of Eqbl—Proof by Induction	21
4.1.1 ND/Logarithmic ND Convergence Comparisons	22
4.2 Function Eqbl	24

4.2.1	Function Comparisons Eqb/Logarithmic Eqbl Right Skewed	24
4.2.2	Function Value Comparisons Eqb/Logarithmic Eqbl Left Skewed	26
4.3	Parameter Estimates from Samples.	26
5	Properties of Eqb	29
6	Use of the Eqbl for the Analysis of Earthquakedata	31
6.1	Representation of Measuring Apparatus, Measured Values and Scales	32
6.1.1	Measuring Apparatus	32
6.1.2	Measured Values and Scales	32
6.1.3	Dataset.	32
6.2	Italy Earthquake Area—Preliminary to the Earthquake in Central Italy.	34
6.2.1	Measurement Sequence.	34
6.2.2	Logarithmic Values	35
6.2.3	Origin and Application of the Measured Values	35
6.3	Presumption.	36
6.3.1	Recording the Measurement Data Along a Time Axis Until May 9th, 2016	36
6.3.2	Checking the Frequency Distribution of the Time Series Against the Theoretical Density	37
6.3.3	For the Application of Fourier Transformation.	40
6.3.4	Deepening the Presumption	41
6.4	Italy Earthquake Area—Earthquake in Central Italy.	42
6.4.1	Consideration of the Total Area and Its Data Set	42
6.4.2	Consideration “Development and the Contribution of High-Magnitude Earthquakes Through Low-Magnitude Earthquakes” in Weekly Intervals	44
6.4.3	Final Stage “Development and Contribution of High-Magnitude Earthquakes by Low-Magnitude Earthquakes” on a Weekly Basis.	45
6.4.4	Identification of the Earthquake Source Area	47
6.4.5	Consideration of the Lower Magnitudes of the Province of Ascoli Piceno	49
6.4.6	Viewing the Lower Magnitudes of the Province of Macerata	49

6.4.7	Consideration of the Lower Magnitudes of the Province of Perugia.	49
6.4.8	Consideration of the Lower Magnitudes of the Province of Rimini	52
6.5	Summary of the Consideration of the Lower Magnitudes of the Provinces	53
6.5.1	Relationship Between the Probability Density of Total Energy and the Accumulated Number of the Respective Magnitudes	55
6.6	Albania Earthquake Zone	55
6.6.1	Evaluation of Measurement Data as of August 21, 2019—Before the Earthquake from September 21, 2019 to September 29, 2019	55
6.6.2	Identification of the Most Endangered Provinces	56
6.6.3	Identification of the Costa Albanese Settentrionale (ALBANIA)	57
6.6.4	Evaluation of Measurement Data on the Earthquake from 09/21/2019 to 09/29/2019	58
6.6.5	Summary of Results Identification of the Costa Albanese Settentrionale (ALBANIA) and the Entire Analysis.	61
6.6.6	Perspective	61
6.7	Risk Assessment	62
6.8	Discussion of Results	64
6.9	Result and Actions.	65
6.10	Annex Function Graph, Parameters, Function	66
7	Approximation to the Location Parameters Modal, Mean, Median; Introduction of the Sine Derivative	67
8	Final Statement	71
9	Summary	73
	Abbreviations/Translations	75
	References	77
