

Introduction	15
---------------------------	-----------

OVERVIEW AND THE ROLE OF GERMANY IN THE VERIFICATION REGIME

1 Verification of the CTBT and its Implementation in Germany	21
---	-----------

CHRISTIAN BÖNNEMANN

1.1 Introduction	21
1.2 Verification regime	24
1.3 Seismological monitoring of nuclear explosions in Germany (before the CTBT)	25
1.4 Implementation of the CTBT in Germany	28
1.5 Verification of the CTBT in Germany	29
1.6 Main CTBT actors of the German Federal Government	33
1.7 Other German CTBT actors	34

2 German Contributions to the International Monitoring System (IMS)	35
--	-----------

PETER J. GAEBLER, CHRISTOPH PILGER, LARS CERANNA, GERNOT HARTMANN,
J. OLE ROSS, CLEMENS SCHLOSSER & ANDREAS BOLLHÖFER

2.1 Introduction	35
2.2 Station operation and maintenance	39
2.3 Primary seismic monitoring station PS19	41
2.4 Auxiliary seismic monitoring station AS035	46
2.5 Infrasound array IS26	48
2.6 Infrasound array IS27	53
2.7 Radionuclide monitoring station RN33	59

VERIFICATION TECHNOLOGIES OF THE INTERNATIONAL MONITORING SYSTEM

3 The Seismic Network of the International Monitoring System (IMS)	69
---	-----------

PETER J. GAEBLER & LARS CERANNA

3.1 Introduction	69
3.2 IMS seismic network stations	70
3.3 Global seismicity and nuclear explosion tests	74

3.4	Event discrimination and magnitude-yield relationships	76
3.5	Detection capability of the seismic network – methodology	78
3.6	Detection capability of the seismic network – results	81
3.7	Comparison of the detection capability against REB events	89
3.8	Conclusions	90
4	The Infrasound Network of the International Monitoring System (IMS)	91
	CHRISTOPH PILGER, LARS CERANNA & ALEXIS LE PICHON	
4.1	Introduction	91
4.2	Infrasound – an overview	91
4.3	Infrasound activity in Central and Northern Europe	93
4.4	Infrasound activity from Mt. Etna volcano	98
4.5	IMS global network performance	104
4.6	Conclusions	108
5	The Hydroacoustic Network of the International Monitoring System (IMS)	111
	CHRISTOPH PILGER & LARS CERANNA	
5.1	Introduction	111
5.2	Hydroacoustic stations and technology	111
5.3	Hydroacoustic propagation	113
5.4	Hydroacoustic monitoring – examples of natural and anthropogenic signals	116
5.5	Worldwide location of hydroacoustic events	119
5.6	Conclusions	121
6	The IMS Radionuclide Network Supported by Atmospheric Transport Modelling (ATM)	123
	J. OLE ROSS, ANDREAS BOLLHÖFER & CLEMENS SCHLOSSER	
6.1	Introduction	123
6.2	Anthropogenic fission products in the atmosphere	125
6.3	Atmospheric Transport Modelling	129
6.4	Conclusions	133

VERIFICATION TEST CASES FOR THE INTERNATIONAL MONITORING SYSTEM

7	Verification of the North Korean Nuclear Explosions 2006, 2009, 2013, and 2016	137
	GERNOT HARTMANN, ANDREAS BARTH, J. OLE ROSS, ILONA GRÜNBERG & MICHAELA FREI	
7.1	Introduction	137
7.2	Seismic event localization	138
7.3	Source identification	141
7.4	Yield estimation	148
7.5	Moment tensor inversion	152
7.6	Radionuclide evidence	156
7.7	New and future system developments for CTBT	162
7.8	Conclusions	164
8	National Data Center Preparedness Exercises (NPE) for an Independent Performance Assessment	167
	J. OLE ROSS, NICOLAI GESTERMANN, THOMAS PLENEFISCH, GERNOT HARTMANN & LARS CERANNA	
8.1	Introduction	167
8.2	First ideas realized in NPE2007 and NPE2008	168
8.3	NPE2009 – introducing “data fusion”	169
8.4	Complex multi-technology scenario for NPE2010	171
8.5	Straight non-compliance in NPE2012	179
8.6	NPE2013	181
8.7	NPE2015	185
8.8	Conclusions	185
9	The Tohoku Earthquake with Tsunami and the Fukushima Releases as Performance Test for the International Monitoring System (IMS)	187
	J. OLE ROSS, THOMAS PLENEFISCH, LARS CERANNA, ANDREAS BOLLHÖFER & CLEMENS SCHLOSSER	
9.1	Introduction	187
9.2	The Tohoku earthquake of March 11, 2011	187
9.3	Atmospheric Transport Modelling simulating the Fukushima radionuclide plume arrival at IMS stations across the globe	194
9.4	Backward modelling – finding Fukushima	199
9.5	Potential blinding of the IMS	200
9.6	Conclusions	203

10 Chelyabinsk – a Benchmark for Global Infrasound Detections	205
CHRISTOPH PILGER, KARL KOCH, J. OLE ROSS & LARS CERANNA	
10.1 Introduction	205
10.2 Chelyabinsk – event description and source characteristics	205
10.3 Detections and non-detections by the global IMS network	206
10.4 Infrasound propagation modelling	211
10.5 Discussion of parameters influencing detection capability	213
10.6 The seismoacoustic fingerprint of the fireball across Central and Northern Europe	216
10.7 Conclusions	222

INTERNATIONAL DATA CENTER, NATIONAL TECHNICAL MEANS AND ON-SITE INSPECTION

11 Some Considerations on the Quality of International Data Center (IDC) Standard Waveform Products	227
KARL KOCH	
11.1 Introduction	227
11.2 Quality control work on the IDC Reviewed Event Bulletin	229
11.3 The impact of interactive analysis on bulletin quality at the International Data Center in 2007	235
11.4 Conclusions	246
 12 Remote Sensing Data in Support of CTBT Monitoring: Case Studies of Underground Nuclear Explosions	 247
JÖRG SCHLITTENHARDT, MORTON CANTY, XIAOYING CONG & ILONA GRÜNBERG	
12.1 Introduction	247
12.2 DInSAR processing of ERS data over NTS	247
12.3 Co-seismic deformation	250
12.4 Post-seismic deformation	250
12.5 Wide-area change-detection: A case study of Nevada Test Site underground nuclear explosions using conventional multispectral satellite data	254
12.6 Comparison of differential SAR interferometry and wide-area change-detection results	255
12.7 Case study of the nuclear test in North Korea of October 9, 2006	255
12.8 Conclusions	257

13	The Role of On-Site Inspections (OSI) of the CTBT	259
	NICOLAI GESTERMANN, MARTIN MÜLLER & FRANZ GRONESCHILD	
13.1	Introduction	259
13.2	Regulations and provisions from the Treaty	261
13.3	Decision about the conduct of an OSI	263
13.4	Possible scenarios for an OSI request	264
13.5	The role of NTM in case of an OSI	264
13.6	OSI technologies	266
13.7	OSI search logic and management systems	272
13.8	Results of an OSI	273
13.9	Integrated Field Exercises 2008 and 2014	274
13.10	Training and nomination of inspectors	277
13.11	Conclusions	278
14	The Seismic Aftershock Monitoring System (SAMS) for On-Site Inspections (OSI) of the CTBT	279
	NICOLAI GESTERMANN, BENJAMIN SICK & MANFRED JOSWIG	
14.1	Introduction	279
14.2	Physical background	283
14.3	The role of SAMS in case of an OSI	285
14.4	The method of Nanoseismic Monitoring	286
14.5	SAMS at the IFE14	290
14.6	Detection threshold estimation of SAMS networks	296
14.7	Conclusions	299
