

Preface	5
Acknowledgement	7
ContentList of Figures.....	9
List of Figures	13
List of Tables	16
Abstract	17
Zusammenfassung	19
1 Introduction	21
1.1 Background and motivation	21
1.2 Research Objectives	23
1.3 Contributions.....	24
1.4 Methodology and outline of the thesis	25
2 State of the art.....	28
2.1 Distributions of disturbances and delays	28
2.2 Robust railway operation.....	29
2.3 Objective systems of dispatching algorithms	31
2.4 Dispatching models.....	33
2.5 Dispatching assistance software	34
3 Operational risk analysis of block sections	35
3.1 Introduction to operational risk analysis.....	35
3.2 Workflow of operational risk analysis.....	37
3.2.1 Determine the statistical distribution of random disturbances	39
3.2.2 Generate and impose the disturbances on target block section.....	41
3.2.3 Calculate the indicator of operation risk analysis	44
3.2.4 Obtain the operational risk map.....	45

3.3	Sensitivity analysis of parameters on operational risk.....	46
3.3.1	Influence of distribution types of imposed disturbances.....	46
3.3.2	Influence of traffic volume in the investigation area	47
3.3.3	Influence of different freight transport schedules	47
3.4	Determination of influencing parameters	47
3.4.1	Number of operational risk levels	47
3.4.2	Number of disturbance scenarios	49
4	Dispatching algorithm development in rolling time horizon framework	50
4.1	Stage division.....	51
4.2	Risk-oriented conflicts detection at a single stage	52
4.3	Dispatching solutions at a single stage.....	57
4.3.1	Initial simulation of the disturbed timetable	58
4.3.2	Retiming for slight conflicts.....	59
4.3.3	Reordering for significant conflicts using TS algorithm	59
4.4	Iterative railway simulation and dynamic dispatching in the rolling time horizon framework	62
5	Assessment of the proposed dispatching algorithm.....	65
5.1	Indicators for assessing the performance of the dispatching solution	65
5.1.1	Total weighted waiting time	65
5.1.2	Number of relative reordering.....	65
5.1.3	Average absolute retiming.....	66
5.2	Comparison with FCFS dispatching principle	67
5.3	Comparison with real time dispatching decisions	67
6	Sensitivity analysis of dispatching parameters.....	69
6.1	Sensitivity analysis of parameters in rolling time horizon framework.....	70
6.2	Sensitivity analysis of parameters in random disturbances generator.....	70

6.3	Convergence analysis of the TS parameter N_{loop}	71
7	Case study	72
7.1	Investigation area.....	72
7.2	Operational risk analysis	74
7.2.1	Distributions and parameters of random disturbances.....	74
7.2.2	Simulation results of operational risk	77
7.2.3	Determination of influencing parameters	81
7.2.4	Operational risk classification and mapping.....	83
7.2.5	Summary of operational risk analysis	85
7.3	Dispatching algorithm.....	85
7.3.1	Stage division.....	86
7.3.2	Risk-oriented conflicts detection at a single stage	86
7.3.3	Dispatching solutions at a single stage.....	89
7.3.4	Dynamic dispatching in the rolling time horizon framework	91
7.3.5	Summary of dispatching algorithm	92
7.4	Assessment of the dispatching algorithm and sensitivity analysis of dispatching-related parameters	93
7.4.1	Assessment of dispatching algorithm over stages	93
7.4.2	Sensitivity analysis of dispatching parameters	94
7.4.3	Comparison with FCFS dispatching principle	100
8	Specification of the developed algorithm	102
8.1	Core model structure.....	102
8.2	Functional and non-functional requirements.....	103
8.3	Application scenarios	105
8.4	Architecture of the dynamic dispatching system	106
8.4.1	Logical view	107

8.4.2	Process view	110
8.4.3	Development view	113
9	Conclusions and prospective	115
9.1	Conclusions.....	115
9.2	Prospective	116
	Appendix.....	118
	List of Abbreviations.....	122
	List of Symbols	123
	Glossary	126
	Publication bibliography	130
