List of Abbreviations	xvii
Glossary	xix
List of Figures	xxi
List of Tables	xxiii

I Research Background	1
1 Introduction	5
1.1 Sports analytics with kinematic data	5
1.1.1 Motivation	5
1.1.2 Measurement methods	5
1.1.3 Processing pipeline	7
1.2 Scope of this thesis	8
1.3 State of the art	8
1.3.1 Kinematic analysis	8
1.3.2 Interpretation of kinematic data	9
1.3.3 Sports-specific applications	10
1.4 Contributions	14
1.5 Outline	18
2 Fundamentals	19
2.1 Inertial-magnetic measurement units	19
2.1.1 Sensing components	19
2.1.2 Advantages and limitations	22
2.1.3 In-field calibration and alignment	24
2.1.4 Available sensor hardware	26
2.2 Rotation sequences and orientation estimation	29
2.2.1 Representation of rotation and orientation	29
2.2.2 Principles for IMMU-based rotation estimation	32
2.2.3 Data fusion	34
2.3 Machine learning	36
2.3.1 Machine learning pipeline	36
2.3.2 Training stage	42

II	Unobtrusive Kinematic Analysis	45
3	Scuba Diving: Pose Determination of Divers' Bodies and Shanks	49
3.1	Data acquisition	49
3.1.1	Hardware setup	49
3.1.2	Study design	50
3.2	Calibration and alignment	52
3.3	Upper body analysis	53
3.3.1	Orientation calculation	53
3.3.2	Evaluation	53
3.4	Fin kick analysis	54
3.4.1	Automated kick detection	54
3.4.2	Shank orientation	56
3.4.3	Evaluation	57
3.5	Results	58
3.5.1	Upper body analysis	58
3.5.2	Fin kick analysis	58
3.6	Discussion	58
3.6.1	Discussion of results	58
3.6.2	Impact and application	59
3.6.3	Possible improvements	60
4	Rowing: Stroke Detection and In-Stroke Boat Rotation Determination	61
4.1	Data acquisition	61
4.1.1	Hardware setup	61
4.1.2	Study design	62
4.2	Calibration	64
4.3	Rowing stroke detection	65
4.3.1	Template-based detection	65
4.3.2	Evaluation	66
4.4	Rotation determination during rowing strokes	67
4.4.1	Quaternion-based integration	67
4.4.2	Evaluation	67
4.5	Results	68
4.5.1	Rowing stroke detection	68
4.5.2	Rotation determination	69

4.6	Discussion	70
4.6.1	Discussion of results	70
4.6.2	Impact and application	71
4.6.3	Possible improvements	72
5	Ski Jumping: Automated Ski Velocity and Jump Length Determination	75
5.1	Data acquisition	75
5.1.1	Hardware setup	75
5.1.2	Study design	77
5.1.3	Definition of coordinate systems and jump phases	78
5.2	Calibration	79
5.2.1	Standard calibration at application temperature	79
5.2.2	Analysis of temperature influence on calibration parameters	80
5.3	Phase segmentation	84
5.3.1	HMM-based segmentation	84
5.3.2	Evaluation	85
5.4	Functional alignment	85
5.5	Ski orientation	86
5.6	Ski velocity	87
5.6.1	Ski velocity from start to take-off	88
5.6.2	Ski velocity from take-off to landing	88
5.6.3	Evaluation	89
5.7	Jump length	89
5.7.1	Ski position in global system	89
5.7.2	Transformation to jumping hill-specific jump length	90
5.7.3	Evaluation	90
5.8	Results	91
5.8.1	Phase segmentation	91
5.8.2	Ski velocity	92
5.8.3	Jump length	93
5.9	Discussion	93
5.9.1	Discussion of results	93
5.9.2	Impact and application	95
5.9.3	Possible improvements	96

III	Performance Interpretation with Kinematic Features	99
6	Snowboarding: Classification of Slopestyle Tricks	103
6.1	Data acquisition	103
6.1.1	Hardware setup	103
6.1.2	Study design	104
6.2	Calibration and standardization of stance direction . . .	106
6.3	Event detection	106
6.3.1	Threshold-based analysis	107
6.3.2	Evaluation	108
6.4	Classification of trick category	108
6.4.1	Grind trick classification	108
6.4.2	Air trick classification	110
6.4.3	Parameter definition	110
6.4.4	Evaluation	111
6.5	Classification of trick class	111
6.5.1	Definition of relevant time interval	111
6.5.2	Features and classifiers	111
6.5.3	Evaluation	112
6.6	Results	112
6.6.1	Event detection	112
6.6.2	Classification of trick category	112
6.6.3	Classification of trick class	113
6.7	Discussion	114
6.7.1	Discussion of results	114
6.7.2	Impact and application	114
6.7.3	Possible improvements	115
7	Skateboarding: Real-Time Trick Classification and Visualization and the Corresponding Community Perception	117
7.1	Data acquisition	118
7.1.1	Hardware setup	118
7.1.2	Study design	121
7.2	Calibration and standardization of stance direction . . .	124
7.3	Trick analysis	124
7.3.1	Event detection	124
7.3.2	Classification	126
7.3.3	Evaluation	127

7.4	Trick visualization	128
7.4.1	Data fusion for orientation determination	128
7.4.2	Rotation calculation during trick motion	129
7.4.3	Evaluation	129
7.5	Real-time prototype	130
7.5.1	Framework	130
7.5.2	App implementation	131
7.5.3	Video demonstration	133
7.6	Community perception	133
7.6.1	Questionnaire	134
7.6.2	Evaluation	135
7.7	Results	135
7.7.1	Trick analysis	135
7.7.2	Trick visualization	136
7.7.3	Community perception	137
7.8	Discussion	141
7.8.1	Discussion of results	141
7.8.2	Impact and application	142
7.8.3	Possible improvements	143
IV	Overall Discussion and Conclusion	145
8	Discussion	149
8.1	Methods of this thesis	149
8.1.1	Data acquisition	149
8.1.2	Kinematic analysis	151
8.1.3	Performance interpretation	152
8.2	Application of orientation features	153
8.2.1	Kinematic analysis	153
8.2.2	Performance interpretation	154
8.3	Acceptance of technology in sports analytics	154
8.4	Application of the proposed research	155
8.5	Outlook	157
8.5.1	Extensions of proposed methods	157
8.5.2	Transfer to sports science	159
8.5.3	Implementation for real-world applications	159

9 Conclusion 161

Bibliography 165
