Preface *xix*

About the Editor *xxvii*

Part I Spectroscopy and Characterization 1

1	Spectroscopic Characterization of Graphitic Nanomaterials and Metal Oxides for Gas Sensing 3
	<i>Olasunbo Farinre, Hawazin Alghamdi, and Prabhakar Misra</i>
1.1	Introduction and Overview 3
1.1.1	Graphitic Nanomaterials 3
1.1.1.1	Synthesis of Graphitic Nanomaterials 5
1.1.2	Metal Oxides 8
1.2	Spectroscopic Characterization of Graphitic Nanomaterials and Metal Oxides 9
1.2.1	Graphitic Nanomaterials 9
1.2.1.1	Characterization of Carbon Nanotubes (CNTs) 10
1.2.1.2	Characterization of Graphene and Graphene Nanoplatelets (GnPs) 11
1.2.2	Characterization of Tin Dioxide (SnO ₂) 12
1.3	Graphitic Nanomaterials and Metal Oxide-Based Gas Sensors 19
1.3.1	Fabrication of Graphitic Nanomaterials-Based Gas Sensors 19
1.3.1.1	Carbon Nanotube (CNT)-Based Gas Sensors 19
1.3.1.2	Graphene and Graphene Nanoplatelet (GnP)-Based Gas Sensors 20
1.3.2	Fabrication of Metal Oxide-Based Gas Sensors 21
1.3.2.1	Tin Dioxide (SnO ₂)-Based Gas Sensors 23
1.4	Conclusions and Future Work 24
	Acknowledgments 26
	References 26

2	Low-dimensional Carbon Nanomaterials: Synthesis, Properties, and Applications Related to Heat Transfer, Energy Harvesting, and Energy Storage	33
	<i>Mahesh Vaka, Tejaswini Rama Bangalore Ramakrishna, Khalid Mohammad, and Rashmi Walvekar</i>	
2.1	Introduction	33
2.2	Synthesis and Properties of Low-dimensional Carbon Nanomaterials	35
2.2.1	Zero-dimensional Carbon Nanomaterials (0-DCNs)	35
2.2.1.1	Fullerene	35
2.2.1.2	Carbon-encapsulated Metal Nanoparticles	35
2.2.1.3	Nanodiamond	37
2.2.2	Onion-like Carbons	38
2.2.3	One-dimensional Carbon Nanomaterials	39
2.2.3.1	Carbon Nanotube	39
2.2.3.2	Carbon Fibers	39
2.2.4	Two-dimensional Carbon Nanomaterials	40
2.3	Applications	42
2.3.1	Hydrogen Storage	42
2.3.2	Solar Cells	43
2.3.3	Thermal Energy Storage	44
2.3.4	Energy Conversion	45
2.4	Conclusions	46
	References	46
3	Mesoscale Spin Glass Dynamics	55
	<i>Samaresh Guchhait</i>	
3.1	Introduction	55
3.2	What Is a Spin Glass?	56
3.2.1	Spin Glass and Its Correlation Length	57
3.2.2	Mesoscale Spin Glass Dynamics	60
3.3	Summary	64
	Acknowledgments	64
	References	64
4	Raman Spectroscopy Characterization of Mechanical and Structural Properties of Epitaxial Graphene	67
	<i>Amira Ben Gouider Trabelsi, Feodor V. Kusmartsev, Anna Kusmartseva, and Fatemah Homoud Alkallas</i>	
4.1	Introduction	67
4.2	Epitaxial Graphene Mechanical Properties Investigation	68
4.2.1	Optical Location of Epitaxial Graphene Layers	68
4.2.2	Raman Location of Mechanical Properties Changes	71
4.2.2.1	Graphene 2D Mode	71
4.2.2.2	G Mode Investigation	74
4.2.2.3	Strain Percentage	76

4.3	Raman Polarization Study	77
4.3.1	Size Domain of Graphene Layer	77
4.3.2	Polarization Study	78
4.4	Conclusions	80
	Acknowledgments	80
	References	80
5	Raman Spectroscopy Studies of III–V Type II Superlattices	83
	<i>Henan Liu and Yong Zhang</i>	
5.1	Introduction	83
5.2	Raman Study on InAs/GaSb SL	84
5.2.1	Analysis on (001) Scattering Geometry	85
5.2.2	Analysis on (110) Scattering Geometry	86
5.3	Raman Study on InAs/InAs _{1-x} Sb _x SL	90
5.3.1	Raman Results for the Constituent Bulks and InAs _{1-x} Sb _x Alloys	90
5.3.2	Analysis on (001) Scattering Geometry for the SLs	93
5.3.3	Analysis on (110) Scattering for the SLs	95
5.4	A Comparison Among the InAs/InAs _{1-x} Sb _x , InAs/GaSb, and GaAs/AlAs SLs	97
5.5	Conclusion	98
	References	98
6	Dissecting the Molecular Properties of Nanoscale Materials Using Nuclear Magnetic Resonance Spectroscopy	101
	<i>Nipanshu Agarwal and Krishna Mohan Poluri</i>	
6.1	Introduction to Nanomaterials	101
6.2	Techniques Used for Characterization of Nanomaterials	104
6.3	Nuclear Magnetic Resonance (NMR) Spectroscopy	105
6.3.1	Principle of NMR Spectroscopy	106
6.3.2	Various NMR Techniques Used in Nanomaterial Characterization	106
6.3.2.1	One-dimensional NMR Spectroscopy	108
6.3.2.2	Relaxometry (T_1 and T_2)	108
6.3.2.3	Two-dimensional NMR Spectroscopy	110
6.3.3	Advantages and Disadvantages of Using NMR Spectroscopy	114
6.4	Applications of NMR in Nanotechnology	115
6.4.1	NMR for Characterization of Nanomaterials	115
6.4.1.1	Characterization of Gold Nanomaterials by NMR	115
6.4.1.2	Characterization of Organic Nanomaterials by NMR	119
6.4.1.3	Characterization of Quantum Dots and Nanodiamonds by NMR	120
6.4.2	Elucidating the Molecular Characteristics/Interactions of Nanomaterials Using NMR	120
6.4.2.1	Characterizing Nanodisks Using Paramagnetic NMR	120
6.4.2.2	Characterizing Nanomaterials Using Low Field NMR (LF-NMR)	123

6.4.2.3	Analyzing Nanomaterial Interactions Using 2D NMR Techniques	123
6.4.3	Characterization of Magnetic Contrast Agents (MR-CAs)	128
6.5	Conclusions	132
	Acknowledgments	132
	References	132
7	Charge Dynamical Properties of Photoresponsive and Novel Semiconductors Using Time-Resolved Millimeter-Wave Apparatus	149
	<i>Biswadev Roy, Branislav Vlahovic, M.H. Wu, and C.R. Jones</i>	
7.1	Introduction	149
7.1.1	Why Charge Dynamics for Novel Materials in the Millimeter-Wave Regime?	150
7.1.2	Underlying Theory of Operation and Time-Resolved Data: Treatment of Internal Fields in Samples	154
7.1.3	Apparatus Design and Instrumentation	156
7.1.4	Sensitivity Analysis and Dynamic Range	158
7.1.5	Calibration Factor	159
7.2	Studies on RF Responses of Materials	162
7.2.1	Transmission and Reflection Response for GaAs	162
7.2.2	Silicon Response by Resistivity	162
7.2.2.1	Charge Carrier Concentration	165
7.2.2.2	Millimeter-Wave Probe and Laser Data	166
7.2.2.3	TR-mmWC Charge Dynamical Parameter Correlation Table and Sample-Resistivity	168
7.2.2.4	Photoconductance (ΔG) Using Calculated Sensitivity	171
7.3	CdS _x Se _{1-x} Nanowires	174
7.3.1	Transmission and Reflection Response Spectra for CdX Nanowire	174
7.3.2	Millimeter-Wave Signal Coherence and Decay Response of CdS _x Se _{1-x} Nanowire	176
7.4	Conclusions	182
7.5	Data: CdS _x Se _{1-x} TR-mmWC Responses for Various Pump Fluences	182
	Acknowledgments	183
	References	183
8	Metal Nanoclusters	187
	<i>Sayani Mukherjee and Sukhendu Mandal</i>	
8.1	Introduction	187
8.2	Gold Nanoclusters	189
8.2.1	Phosphine-protected Au-NCs	190
8.2.2	Thiol-protected Nanoclusters	193
8.2.2.1	Brust-Schiffrin Synthesis	193
8.2.2.2	Modified Brust-Schiffrin Synthesis	194

8.2.2.3	Size-focusing Method	197
8.2.2.4	Ligand Exchange-induced Structural Transformation	200
8.2.3	Other Ligands as Protecting Agents	202
8.3	Mixed Metals Alloy Nanoclusters	202
8.4	Conclusion	203
8.5	Future Direction	203
	Acknowledgment	204
	References	204

Part II Modeling and Simulation 211

9	Simulations of Gas Separation by Adsorption	213
	<i>Hawazin Alghamdi, Hind Aljaddani, Sidi Maiga, and Silvina Gatica</i>	
9.1	Introduction	213
9.2	Simulation Methods	216
9.2.1	Molecular Dynamics Simulations	216
9.2.2	Monte Carlo Simulations	217
9.2.3	Ideal Adsorbed Solution Theory (IAST)	218
9.3	Models	220
9.3.1	Molecular Models	220
9.3.2	Substrate Models	221
9.3.3	Validation of the Methods and Force Fields	222
9.4	Examples	223
9.4.1	GCMC Simulation of CO ₂ /CH ₄ Binary Mixtures on Nanoporous Carbons	223
9.4.2	MD Simulations of CO ₂ /CH ₄ Binary Mixtures on Graphene Nanoribbons/Graphite	224
9.4.3	MD Simulations of H ₂ O/N ₂ Binary Mixtures on Graphene	228
9.4.4	Calculation of the Selectivity of CO ₂ and CH ₄ on Graphene Using the IAST	231
9.5	Conclusion	236
	References	236
10	Recent Advances in Weyl Semimetal (MnBi₂Se₄) and Axion Insulator (MnBi₂Te₄)	239
	<i>Sugata Chowdhury, Kevin F. Garrity, and Francesca Tavazza</i>	
10.1	Introduction	239
10.2	Discussion	241
10.2.1	MBS	242
10.2.2	MBT	243
10.3	Outlook	252
	References	253

Part III Applications 261

- 11 Chemical Functionalization of Carbon Nanotubes and Applications to Sensors 263**
Khurshed Ahmad Shah and Muhammad Shunaid Parvaiz
 - 11.1 Introduction 263
 - 11.2 Properties of Carbon Nanotubes 267
 - 11.2.1 Electrical Properties 267
 - 11.2.2 Mechanical Properties 269
 - 11.2.3 Optical Properties 269
 - 11.2.4 Physical Properties 271
 - 11.3 Properties of Functionalized Carbon Nanotubes 272
 - 11.3.1 Mechanical Properties 272
 - 11.3.2 Electrical Properties 272
 - 11.4 Types of Chemical Functionalization 273
 - 11.4.1 Thermally Activated Chemical Functionalization 273
 - 11.4.2 Electrochemical Functionalization 273
 - 11.4.3 Photochemical Functionalization 274
 - 11.5 Chemical Functionalization Techniques 274
 - 11.5.1 Chemical Techniques 274
 - 11.5.2 Electrons/Ions Irradiation Techniques 275
 - 11.5.3 Specialized Techniques 275
 - 11.6 Sensing Applications of Carbon Nanotubes 276
 - 11.6.1 Gas Sensors 276
 - 11.6.2 Biosensors 277
 - 11.6.3 Chemical Sensors 277
 - 11.6.4 Electrochemical Sensors 278
 - 11.6.5 Temperature Sensors 278
 - 11.6.6 Pressure Sensors 278
 - 11.7 Advantages and Disadvantages of Carbon Nanotube Sensors 278
 - 11.8 Summary 279
 - References 280
- 12 Graphene for Breakthroughs in Designing Next-Generation Energy Storage Systems 287**
Abhilash Ayyapan Nair, Manoj Muraleedharan Pillai, and Sankaran Jayalekshmi
 - 12.1 Introduction 287
 - 12.2 Li-Ion Cells 289
 - 12.2.1 Basic Working Mechanism 289
 - 12.2.2 Role of Graphene: Graphene Foam-Based Electrodes for Li-Ion Cells 291
 - 12.3 Li-S Cells 294
 - 12.3.1 Advantages of Li-S Cells 295
 - 12.3.2 Working of Li-S Cells 295

12.3.3	Challenges of Li-S Cells	296
12.3.4	Graphene-Based Sulfur Cathodes for Li-S Cells	297
12.3.5	Graphene Oxide-Based Sulfur Cathodes for Li-S Cells	298
12.4	Supercapacitors	299
12.4.1	Basic Working Principle	299
12.4.2	Graphene-Based Supercapacitor Electrodes	300
12.4.3	Graphene/Polymer Composites as Electrodes	303
12.4.4	Graphene/Metal Oxide Composite Electrodes	305
12.5	Li-Ion Capacitors	306
12.5.1	Working Principle	306
12.5.2	Graphene/Graphene Composites as Cathode Materials	307
12.5.3	Graphene/Graphene Composites as Anode Materials	309
12.6	Looking Forward	310
	References	311
13	Progress in Nanostructured Perovskite Photovoltaics	317
	<i>Sreekanth Jayachandra Varma and Ramakrishnan Jayakrishnan</i>	
13.1	Introduction	317
13.2	Nanostructured Perovskites as Efficient Photovoltaic Materials	318
13.3	Perovskite Quantum Dots	321
13.4	Perovskite Nanowires and Nanopillars	324
13.4.1	2D Perovskite Nanostructures	326
13.4.2	2D/3D Perovskite Heterostructures	330
13.5	Summary	336
	References	336
14	Applications of Nanomaterials in Nanomedicine	345
	<i>Ayanna N. Woodberry and Francis E. Mensah</i>	
14.1	Introduction	345
14.2	Nanomaterials, Definition, and Historical Perspectives	345
14.2.1	What Are Nanomaterials?	345
14.2.2	Origin and Historical Perspectives	346
14.2.3	Synthesis of Nanomaterials	349
14.2.3.1	Inorganic Nanoparticles	349
14.3	Nanomaterials and Their Use in Nanomedicine	351
14.3.1	What Is Nanomedicine?	351
14.3.2	The Myth of Small Molecules	351
14.3.3	Nanomedicine Drug Delivery Has Implications that Go Beyond Medicine	351
14.3.4	Improvement in Function	351
14.3.5	Nanomaterials Use in Nanomedicine for Therapy	351
14.3.5.1	Progress in Polymer Therapeutics as Nanomedicine	351
14.3.5.2	Recent Progress in Polymer: Therapeutics as Nanomedicines	352
14.3.5.3	Use of Linkers	354
14.3.5.4	Targeting Moiety	354

14.3.6	Polymeric Drugs	355
14.3.7	Polymeric-Drug Conjugates	355
14.3.8	Polymer-Protein Conjugates	356
14.4	The Use of Nanomaterials in Global Health for the Treatment of Viral Infections Such As the DNA and the RNA Viruses, Retroviruses, Ebola, and COVID-19	356
14.4.1	Nanomaterials in Radiation Therapy	358
14.5	Conclusion	359
	References	359
15	Application of Carbon Nanomaterials on the Performance of Li-Ion Batteries	361
	<i>Quinton L. Williams, Adewale A. Adepoju, Sharah Zaab, Mohamed Doumbia, Yahya Alqahtani, and Victoria Adebayo</i>	
15.1	Introduction	361
15.2	Battery Background	362
15.2.1	Genesis of the Rechargeable Battery	362
15.2.2	Battery Cell Classifications	363
15.2.2.1	Primary Batteries – Non-rechargeable Batteries	363
15.2.2.2	Secondary Batteries – Rechargeable Batteries	363
15.2.3	Comparison of Rechargeable Batteries	363
15.2.4	Internal Battery Cell Components	364
15.2.4.1	Cathode	365
15.2.4.2	Anode	366
15.2.4.3	Electrolyte	366
15.2.5	Crystal Structure of Active Materials	366
15.2.5.1	Layered LiCoO_2	367
15.2.5.2	Spinel LiM_2O_4	367
15.2.5.3	Olivine LiFePO_4	368
15.2.5.4	NCM	369
15.2.6	Principle of Operation of Li-Ion Batteries	370
15.2.7	Battery Terminology	371
15.2.7.1	Battery Safety	373
15.2.8	A Glimpse into the Future of Battery Technology	374
15.3	High C-Rate Performance of LiFePO_4 /Carbon Nanofibers Composite Cathode for Li-Ion Batteries	375
15.3.1	Introduction	375
15.3.2	Experimental	375
15.3.2.1	Preparation of Composite Cathode	375
15.3.2.2	Characterization	376
15.3.3	Results and Discussion	376
15.3.4	Summary	379
15.4	Graphene Nanoplatelet Additives for High C-Rate LiFePO_4 Battery Cathodes	380
15.4.1	Introduction	380

15.4.2	Experimental	381
15.4.2.1	Composite Cathode Preparation and Battery Assembly	381
15.4.2.2	Characterizations and Electrochemical Measurements	382
15.4.3	Results and Discussion	382
15.4.4	Summary	386
15.5	LiFePO ₄ Battery Cathodes with PANI/CNF Additive	386
15.5.1	Introduction	386
15.5.2	Experimental	386
15.5.2.1	Preparation of the PANI/CNF Conducting Agent and Coin Cell	387
15.5.3	Results and Discussion	387
15.5.4	Conclusion	392
15.6	Reduced Graphene Oxide – LiFePO ₄ Composite Cathode for Li-Ion Batteries	393
15.6.1	Introduction	393
15.6.2	Experimental	394
15.6.3	Results and Discussion	394
15.6.4	Summary	398
15.7	Rate Performance of Carbon Nanofiber Anode for Lithium-Ion Batteries	398
15.7.1	Introduction	398
15.7.2	Experimental	398
15.7.3	Results and Discussion	399
15.7.4	Summary	401
15.8	NCM Batteries with the Addition of Carbon Nanofibers in the Cathode	402
15.8.1	Introduction	402
15.8.2	Experimental	403
15.8.3	Results and Discussion	403
15.8.4	Summary	405
15.9	Conclusion	407
	Acknowledgments	407
