Preface *XIII*

List of Contributors *XVII*

1	Radial Speckle Interferometry and Applications	1
	<i>Armando Albertazzi Gonçalves Jr. and Matías R. Viotti</i>	
1.1	Introduction	1
1.2	Out-of-Plane Radial Measurement	2
1.2.1	Radial Deformation Measurement of Short Internal Cylinders	3
1.2.2	Radial Deformation Measurement of Long Internal Cylinders	7
1.2.3	Radial Deformation Measurement of External Cylinders	11
1.3	In-Plane Measurement	13
1.3.1	Configuration Using Conical Mirrors	17
1.3.2	Configuration Using a Diffractive Optical Element	19
1.4	Applications	24
1.4.1	Translation and Mechanical Stress Measurements	24
1.4.2	Residual Stress Measurement	27
1.5	Conclusions	33
	References	34
2	Depth-Resolved Displacement Field Measurement	37
	<i>Jonathan M. Huntley and Pablo D. Ruiz</i>	
2.1	Introduction	37
2.2	Low-Coherence Electronic Speckle Pattern Interferometry	39
2.3	Wavelength Scanning Interferometry	43
2.3.1	WSI with a Single Scattering Surface	44
2.3.1.1	Fourier Transform for Measurement of Optical Path Length	46
2.3.1.2	Fourier Transform for Calculation of Interference Phase	47
2.3.1.3	Range and Resolution of Optical Path Difference Measurement	48
2.3.1.4	Determination of Scattering Point Location	49
2.3.1.5	Gauge Volume and Displacement Sensitivity	52

2.3.2	WSI with Volume Scatterers	54
2.3.2.1	Proof-of-Principle Experiments: Two Scattering Layers	57
2.3.3	Comparison of WSI with LCSl	59
2.4	Spectral Optical Coherence Tomography	60
2.4.1	Phase Contrast SOCT for 2D Out-of-Plane Displacement Field Measurement	61
2.4.2	PC-SOCT for 2D In-Plane and Out-of-Plane Displacement Field Measurement	66
2.4.3	Hyperspectral Interferometry for 3D Surface Profilometry	69
2.5	Tilt Scanning Interferometry	71
2.5.1	Depth-Dependent Phase Shift Introduced by a Tilting Wavefront	72
2.5.2	Extraction of the Scattered Amplitude Distribution	75
2.5.3	Depth-Resolved Displacements	77
2.5.4	Gauge Volume, Depth Range, and Displacement Sensitivity	79
2.5.5	Experimental Implementation	80
2.6	Depth-Resolved Techniques Viewed as Linear Filtering Operations	83
2.6.1	Methods Viewed as Linear Filtering Operations	84
2.6.2	Relationship Between $W(K)$ and Spatial Resolution	85
2.6.3	Relationship Between $W(K)$ and Displacement Sensitivity	86
2.6.4	Ewald Sphere for a Wavelength Scanning Interferometer	87
2.6.5	Ewald Sphere for a Tilt Scanning Interferometer	89
2.6.6	Comparison of Spatial Resolution for WSI and TSI	89
2.7	Phase Unwrapping in Three Dimensions	91
2.7.1	Phase Singularities in Two-Dimensional Phase Data	91
2.7.2	Phase Singularity Loops in Three-Dimensional Phase Data	93
2.7.3	3D Phase Unwrapping Algorithm	95
2.7.4	Remaining Ambiguities	96
2.7.5	Example: Dynamic Deformation of Carbon-Fiber Composite Panel	96
2.8	Concluding Remarks	98
	References	99
3	Single-Image Interferogram Demodulation	105
	<i>Manuel Servin, Julio Estrada, and Antonio Quiroga</i>	
3.1	Introduction	105
3.1.1	Spatial Carrier Frequency Techniques	105
3.1.2	Spatial Demodulation Without Carrier	106
3.2	The Fourier Spatial Demodulating Method	106
3.3	Linear Spatial Phase Shifting	109
3.4	Nonlinear Spatial Phase Shifting	113
3.5	Regularized Phase Tracking	115
3.6	Local Adaptive Robust Quadrature Filters	118
3.7	Single Interferogram Demodulation Using Fringe Orientation	122
3.7.1	Orientation in Interferogram Processing	122
3.7.2	Fringe Orientation and Fringe Direction	124

3.7.3	Orientation Computation	126
3.7.3.1	Gradient-Based Orientation Computation	127
3.7.3.2	Plane Fit Orientation Calculation	129
3.7.3.3	Minimum Directional Derivative	131
3.7.4	Direction Computation	132
3.7.4.1	Regularized Phase Tracking Direction Estimation	132
3.7.4.2	Vector Field-Regularized Direction Estimation	134
3.8	Quadrature Operators	135
3.8.1	Phase Demodulation of 1D Interferograms	135
3.8.2	Phase Demodulation from a Single Interferogram: the Vortex Transform	136
3.8.3	Vortex Transform-Based Orientation Computation	138
3.8.4	The General n-Dimensional Quadrature Transform	139
3.9	2D Steering of 1D Phase Shifting Algorithms	142
3.10	Conclusions	143
	References	144
4	Phase Evaluation in Temporal Speckle Pattern Interferometry Using Time–Frequency Methods	147
	<i>Alejandro Federico and Guillermo H. Kaufmann</i>	
4.1	Introduction	147
4.2	The Temporal Speckle Pattern Interferometry Signal	148
4.3	The Temporal Fourier Transform Method	151
4.4	Time–Frequency Representations of the TSPI Signals	153
4.4.1	Preliminaries	154
4.4.1.1	The Asymptotic Signal and the Exponential Model	154
4.4.1.2	Fidelity Measures	155
4.4.2	The Windowed Fourier Transform	156
4.4.3	The Wavelet Transform	160
4.4.3.1	Evaluation of the Ridge of a Wavelet Transform	163
4.4.3.2	Applications of the Morlet Transform Analysis in TSPI and Other Related Techniques	166
4.4.3.3	The Chirped Wavelet Transform	168
4.4.3.4	Other Wavelet Transforms	171
4.4.4	The Quadratic Time–Frequency Distribution	172
4.4.5	The Empirical Mode Decomposition and the Hilbert Transform	176
4.4.5.1	The Empirical Mode Decomposition Method	178
4.4.5.2	The Hilbert Transform	179
4.4.6	The Generalized S-Transform	182
4.4.7	Two- and Three-Dimensional Approaches	188
4.4.7.1	The Windowed Fourier Transform Method	189
4.4.7.2	Wavelet Transform Methods	190
4.5	Concluding Remarks	199
	References	200

5	Optical Vortex Metrology	207
	<i>Wei Wang, Steen G. Hanson, and Mitsuo Takeda</i>	
5.1	Introduction	207
5.2	Speckle and Optical Vortices	207
5.3	Core Structure of Optical Vortices	209
5.4	Principle of Optical Vortex Metrology	211
5.4.1	Complex Signal Representation of a Speckle-Like Pattern	211
5.4.2	Principle of Optical Vortex Metrology	213
5.5	Some Applications	214
5.5.1	Nanometric Displacement Measurement	214
5.5.2	Linear and Angular Encoder	217
5.5.3	Fluid Mechanical Analysis	224
5.5.4	Biological Kinematic Analysis	230
5.6	Conclusion	235
	References	236
6	Speckle Coding for Optical and Digital Data Security Applications	239
	<i>Arvind Kumar, Madan Singh, and Kehar Singh</i>	
6.1	Introduction	239
6.2	Double Random Fourier Plane Encoding	242
6.2.1	Influence of Coded Image Perturbations, Noise Robustness, and SNR	245
6.3	Variants of the DRPE and Various Other Encryption Techniques	245
6.3.1	Fresnel and Fractional Fourier Transform Domain Encoding	245
6.3.2	Color Image Encoding and Digital Simulation/Virtual Optics-Based Techniques	246
6.3.3	Phase Retrieval- and Polarization-Based Techniques	246
6.3.4	Interference and Joint Transform Correlator Architecture-Based Techniques	246
6.3.5	Fully Phase Encryption Techniques and Encrypted Holographic Memory	246
6.4	Attacks against Random Encoding	247
6.5	Speckle Coding for Optical and Digital Data Security	247
6.6	Encryption Using a Sandwich Phase Mask Made of Normal Speckle Patterns	248
6.6.1	Theoretical Analysis	248
6.6.2	Description of the Experimental Work	250
6.6.2.1	Preparation of Speckle Phase Masks	250
6.6.2.2	Making a Sandwich Phase Mask	251
6.6.2.3	Technique for Easy Alignment of the Constituent Speckle Phase Masks	251
6.6.2.4	Experimental Results	252
6.6.2.5	Computer Simulation	253
6.7	Optical Encryption Using a Sandwich Phase Mask Made of Elongated Speckle Patterns	256

6.7.1	Preparation of the Elongated Speckle Phase Mask	256
6.7.2	Description of the Method	256
6.7.3	Computer Simulation Results	257
6.8	Speckles for Multiplexing in Encryption and Decryption	262
6.9	Multiplexing in Encryption Using Apertures in the FT Plane	264
6.9.1	Methodology	264
6.9.2	Computer Simulation	266
6.9.3	Effect of Aperture Size on the Encryption and Decryption	267
6.9.4	Effect of Increasing the Number and Size of the Apertures	267
6.9.5	Multiplexing in Encryption Using Circular Apertures	271
6.9.6	Multiplexing in Encryption Using Square Apertures	271
6.10	Multiplexing by In-Plane Rotation of Sandwich Phase Diffuser and Aperture Systems	272
6.10.1	Methodology	273
6.10.2	Effect on Decrypted Images of Rotation of One of the Constituent Phase Diffusers	274
6.10.3	Multiplexing in Encryption Using the Rotation of the RPM R_{sm}	277
6.10.4	Multiplexing by Using Set of Apertures and Angular Rotation of R_{sm}	278
6.11	Speckles in Digital Fresnel Field Encryption	282
6.11.1	Digital Recording and Numerical Reconstruction of an Off-Axis Fresnel Hologram	282
6.11.2	Digital Fresnel Field Encryption	283
6.11.2.1	Digital Encryption of Fresnel Field Using Single Random Phase Encoding	284
6.11.2.2	Direct Decryption of 3D Object Information from Encrypted Fresnel Field	284
6.11.3	Experiment	286
6.11.4	Results and Discussion	288
6.11.4.1	Discussion of Encryption and Decryption by the Proposed Method	288
6.11.4.2	Some General Remarks on Digital Encryption of Holographic Information	290
6.12	Conclusions	291
	References	292
