

Inhaltsverzeichnis

Why Renewable Fuels should be Considered in the CO₂ Standards of New Cars, Vans and Trucks.

Dr. Tobias Block, Prof. Dr. Dr. Manfred Moldaschl und Marc Sens

The Remaining CO₂ Budget

Prof. Dr. Thomas Koch und Christian Böhmeke

Customer first! – The key to achieve customers' acceptance for connected powertrains

Sebastian Barth, Dr.-Ing. Michael Fischer und Pascal Schlatter

Die Verbrennungskraftmaschine im Hybridantrieb – hocheffizient und kostenoptimiert aus modularen Baureihen

W. Schöffmann, M. Howlett, P. Kapus, G. Teuschl, R. Ellinger, C. Sams, I. Barna und K. Weihrauch

Life cycle assessment of an internal combustion engine vehicle using renewable electricity for fuel and vehicle production

André Sternberg, Christoph Hank und Achim Schaadt

Direct-Injection Hydrogen Combustion Engines - New Requirements for Hardware Development and Simulation Methodology

Dr. Thomas Ebert, Gidion Maniezki und Roberto-Fabio Nobile

Potentials and challenges of hydrogen combustion system development as a sustainable fuel for commercial vehicles

Dr.-Ing. habil. Reza Rezaei, Marc Sens, Michael Riess und Dr. Christoph Bertram

Combustion system development for hydrogen fueled heavy duty internal combustion engines

Lukas Virnich, Bernd Lindemann, Martin Mütter, Avnish Dhongde, Markus Schönen, José Geiger und Andreas Kremer

LCA – additional requirement for engineers

Olaf Toedter, Philipp Weber und Thomas Koch

Energy carriers for transport: Produced overseas and transported to Germany

Otto Machhammer

Variable Valve Train systems as contribution to overcome the NO_x/CO₂ Trade-Off in meeting future emissions legislation - a comparative approach for Diesel PC and CV applications

Dr. Michael Elicker, Harald Elendt, Michael Knorr, Andreas Möller, Dimitri Schott, René Pohlke, Dr. Maximilian Brauer, Lukas Moslener und David Kovacs

Holistic Hybrid RDE Calibration Methodology for EU7

Dr.-Ing. Michael Görgen, Dr.-Ing. Martin Nijs, Dr.-Ing. Matthias Thewes, Dr.-Ing. Andreas Balazs, Surya Kiran Yadla, Dr.-Ing. Johannes Scharf, Dr.-Ing. Tolga Uhlmann, Johannes Claßen, Frank Dorscheidt, Sascha Krysmen, Stefan Sterlepper und Marc Düzgün

Application of a systematic development methodology for post-EU6 engine calibration under RDE compliance

Henning Nies, Prof. Dr. techn. Christian Beidl, Dipl.-Ing. (FH) Holger Hüners und Dr.-Ing. Deniz Serifsoy

Jet Ignition as an Enabling Technology for Stable, Highly Dilute Hydrogen Combustion in Off-Road and Heavy Duty Engines

Michael Bunce, Nathan Peters, Ulrich Weiss und Bouzid Seba

Cylinder Deactivation as an Effective Means for Exhaust Thermal Management and CO₂ Reduction - Test Results on a U.S. 13L HDDE

Robb Janak, Andrew Matheus, Jasmeet Singh, James Sanchez, James Cigler, DeWitt Evans, Christian Hushion, Justin Baltrucki und Arvind Thiruvengadam

A New Class of AI-based Engine Models

Valerian Cimniak, Dr.-Ing. Dominik Rether, Sebastian Bodza, Dr.-Ing. Michael Grill und Prof. Dr.-Ing. Michael Bargende

“Green“ hydrogen for ground-based heavy-duty longdistance transportation – A techno-economic analysis of various supply chains

Lucas Sens, Ulf Neuling, Karsten Wilbrand und Martin Kaltschmitt

Der Wasserstoffmotor im Nfz: Brückentechnologie oder langfristige Lösung?

Anton Arnberger, Univ.-Prof. Dr. Helmut Eichlseder, Dr. Peter Grabner und Bernhard Raser

Charge-Air Cooling of High Performance Engines in an Ejector Refrigeration Cycle

Tobias Beran, Jan Gärtner und Thomas Koch

Spark Ignition System for Alternative Fuels – Robust Ignition, Minimized Spark Plug Wear and Combustion Process Diagnostics

J. Angeby

Dedicated Engine and Exhaust Aftertreatment Concepts for Strongly Electrified Powertrains in the Light Commercial Vehicle Segment

Dr.-Ing. Joschka Schaub, Dr.-Ing. Markus Ehrly, Giuseppe Sammito, Paul Muthyala und Theodoros Kossioris

Thermal Management on Demand; the Exhaust Aftertreatment Solution for Future Heavy Duty Application

Rolf Brück, Dr. Manuel Presti, Mathias Keck, Johannes Dengler und Manuel Faiß

Energy Carriers for Future Mobility

Martin Härtl, Sebastian Blochum, Christoph Kraus und Georg Wachtmeister

Refining the Vision for a 2035 Heavy-Duty Engines Portfolio

Simon Edwards, Andrew Skipton-Carter, Andrew Auld und Nikolas Hill

Zero Impact – Objective and Significance for Vehicle Powertrains and Air Quality

Helmut Eichlseder, Stefan Hausberger, Christian Beidl und Tim Steinhaus

Model Based xEV Test and Calibration – Benefits and Limitations

Gerald Teuschl, Christian Jung, Raimund Ellinger, Peter Ebner, Arno Huss und Reinhard Merl

**AI-Driven Gasoline Direct Injection Development:
A Knowledge-Discovery Framework for Comprehensible
Evaluations of Complex Physical Phenomena**

Massimiliano Botticelli, Robin Hellmann, Paul Jochmann,
Karl Georg Stapf und Erik Schünemann

**Heavy-Duty Combustion Engine 2030: Which Concepts can Contribute
to Achieving the CO₂ Targets for Commercial Vehicles?**

Dr. Hubertus Ulmer, Tom George, Dr. Reza Rezae, Dr. Jan Böhme
und Dr. Jörn Seebode

**50% Efficiency on a Combustion Engine - Status and Measurement
Results**

Rolf Dreisbach, Daniele Corsini, Patrick Egarter, Klaus Hadl,
Julian Schäffer, Hans Felix Seitz, Helmut Theißl, Martin Wieser
und Bernhard Raser

**Operation of OME in a single cylinder research engine and a series
engine - An Analysis of efficiency and ultralow emissions
by an OME-specific application**

Philipp Demel, Friedemar Knost, Alexander Mokros
und Univ.-Prof. Dr. techn. Christian Beidl

**The road to a low CO₂ mobility - New perspectives on the transport
and energy transition in Germany**

Dr. Martin Stahl, Dr. Markus Seeberger und José Miguel Escobar Coto

**Application of Life Cycle Analyses to assess the Efficiency of Car Drive
Systems**

Daniel Weißbach, Stephan Gottlieb, Götz Ruprecht, Armin Huke
und Marcel Schäufele

**Potential Analysis of a DMC/MeFo Mixture in a 4- Cylinder Light
Vehicle Gasoline Engine**

Bartosch Gadomski, Mario Retzlaff und Fabian Thamm

reFuels – rethinking fuels: Performance of regenerative fuels

Thomas Weyhing, Mitra Zabihigivi, Mohammad Moradi, Tobias Michler,
Jonathan Ziegler, Uwe Wagner, Olaf Toedter und Thomas Koch

**Fluorination of Methanol Catalysts to improve Productivity
and Selectivity**

Lukas D. Ernst und Ingo Krossing

Fridays For Future demands climate neutral mobility and a complete mobility revolution

Gregor Petrowitsch und Anna Pribil
