Preface — VII

About the book — IX

Part I: Fundamentals

1 Introduction — 3

- 1.1 Short history of electrochemistry — 3
 - 1.1.1 Luigi Galvani – animal electricity — 3
 - 1.1.2 Allesandro Volta – pile to disprove animal electricity — 5
 - 1.1.3 John Daniell – early battery — 6
 - 1.1.4 William Grove – early fuel cell — 6
 - 1.1.5 Robert Bunsen – economic electrode material — 8
 - 1.1.6 Michael Faraday – quantitative experiments — 9
 - 1.1.7 Walther Nernst – thermodynamics — 9
- 1.2 Fields of applications — 10
 - 1.2.1 Biomedical sensors and point-of-care systems — 11
 - 1.2.2 Neuroscience, neurotechnology, and auditory nerve stimulation — 12
 - 1.2.3 Microelectronics — 15
 - 1.2.4 Energy applications — 15
- 1.3 Electrochemical cells — 17
 - 1.3.1 Primary and secondary cells — 18
 - 1.3.2 Half-cell — 19
 - 1.3.3 Electrochemical cell in equilibrium — 20

2 Electrochemical theory — 23

- 2.1 Conventions — 23
- 2.2 Faradaic processes — 24
 - 2.2.1 Faraday's law — 25
 - 2.2.2 Electron transfer — 26
 - 2.2.3 Faradaic processes in equilibrium – Nernst equation — 28
 - 2.2.4 General electrode reaction — 30
- 2.3 Faradaic processes: kinetic control – electron transfer — 31
 - 2.3.1 Activated complex theory — 31
 - 2.3.2 Butler–Volmer equation — 33
 - 2.3.3 Charge-transfer close to equilibrium: linearization — 36
 - 2.3.4 Charge-transfer far from equilibrium: Tafel plot — 37
- 2.4 Faradaic processes: mass transfer control — 38
 - 2.4.1 Diffusion — 39

2.4.2	Migration —	40
2.4.3	Convection —	40
2.4.4	Nernst–Planck equation —	41
2.4.5	Diffusion: constant polarization —	41
2.4.6	Diffusion: potential step experiment – Cottrell equation —	43
2.5	Faradaic processes: combined kinetic and mass transfer control —	48
2.5.1	Reversibility —	48
2.5.2	Overpotential —	50
2.6	Interfacial region —	52
2.6.1	Electrical double layer —	53
2.6.2	Zeta potential – electrokinetic effects —	55
2.7	Non-faradaic processes —	56
2.7.1	Capacitive currents —	56
2.7.2	Pseudo-capacitive effects —	59
2.8	Potential scales —	59
2.8.1	Influence of pH —	59
2.8.2	Stability of water —	60
2.8.3	Pourbaix diagrams —	60
3	Instrumentation —	65
3.1	Three-electrode setup —	65
3.2	Potentiostat —	66
3.2.1	Adder potentiostat —	68
3.2.2	Signal generation and data acquisition —	69
3.2.3	Stability, noise, and compliance voltage —	74
3.2.4	Potential drop (IR drop) and its compensation —	76
3.2.5	Potential of the counter electrode —	79
3.2.6	Commercial devices —	80
3.2.7	Integrated circuits —	82
3.3	Galvanostat —	85
3.4	Potential measurement —	87
3.5	Electrical shielding —	87
4	Electrochemical laboratory —	89
4.1	Classification of electrodes —	89
4.1.1	Classes of electrodes —	89
4.1.2	Polarizability and potential window —	90
4.2	Reference electrodes —	91
4.2.1	Hydrogen reference electrodes —	92
4.2.2	Silver/silver chloride electrode —	94
4.2.3	Silver/silver bromide electrode —	98
4.2.4	Calomel electrode —	98

4.2.5	Diffusion potential, liquid junction potentials —	98
4.3	Working and counter electrodes —	101
4.3.1	Metal electrodes —	101
4.3.2	Mercury electrodes —	102
4.3.3	Carbon electrodes —	104
4.3.4	Metal oxide electrodes —	106
4.3.5	Counter electrodes —	106
4.3.6	Ultramicroelectrodes —	107
4.3.7	Microfabricated electrodes —	108
4.3.8	Gas-diffusion electrodes —	109
4.3.9	Electrode polishing —	110
4.4	Electrochemical cells – labware —	111
4.4.1	Flat sample cell —	112
4.4.2	Electrolyte droplets on the electrode chip —	112
4.5	Electrolytes —	113
4.5.1	Aqueous electrolytes —	113
4.5.2	Nonaqueous liquid electrolytes —	115
4.5.3	Solid electrolytes —	117
4.6	Redox couples —	117
4.6.1	Ruthenium hexamine —	118
4.6.2	Ferrocene —	118
4.6.3	Ferrocyanide/ferricyanide —	119
4.6.4	Inner-sphere versus outer-sphere electron transfer —	119

Part II: Methods

5	Classical methods —	123
5.1	Potentiometry —	123
5.1.1	Open circuit potential —	123
5.1.2	Donnan potential, membrane potential —	124
5.1.3	Ion-selective electrode —	125
5.1.4	pH glass electrode —	131
5.1.5	Active potentiometry —	134
5.2	Amperometry —	135
5.2.1	Single-potential amperometry —	136
5.2.2	Step-response amperometry —	136
5.2.3	Chronoamperometry —	138
5.2.4	Pulsed-amperometric detection —	140
5.2.5	Chronocoulometry —	143
5.3	Voltammetry —	145
5.3.1	Sign conventions —	145

- 5.3.2 Cyclic voltammetry and linear scan voltammetry — **146**
- 5.3.3 Cyclic voltammetry of metal electrodes — **147**
- 5.3.4 Cyclic voltammetry of electroactive substances in the electrolyte — **154**
- 5.3.5 Polarography — **172**
- 5.3.6 Pulse voltammetry — **175**
- 5.3.7 Square-wave voltammetry — **178**
- 5.3.8 AC voltammetry — **181**
- 5.3.9 Stripping voltammetry — **184**
- 5.3.10 Fast-scan cyclic voltammetry — **187**

6 Combined methods — 189

- 6.1 Hydrodynamic methods — **189**
 - 6.1.1 Rotating disk electrode — **190**
 - 6.1.2 Rotating ring disk electrode — **195**
 - 6.1.3 Flow cells — **200**
 - 6.1.4 Zeta potential measurement — **200**
- 6.2 Scanning methods — **201**
 - 6.2.1 Scanning electrochemical microscopy — **201**
 - 6.2.2 Electrochemical atomic force microscopy — **202**
 - 6.2.3 Electrochemical scanning tunneling microscope — **203**
- 6.3 Other measurement methods — **204**
 - 6.3.1 Electrochemical quartz crystal microbalance — **204**
 - 6.3.2 Electrochemical noise analysis — **207**
 - 6.3.3 Spectroelectrochemistry — **208**

7 Electrochemical impedance spectroscopy — 211

- 7.1 Fundamentals — **211**
 - 7.1.1 Mathematical formulation and assumptions — **211**
 - 7.1.2 Measurement methods — **213**
 - 7.1.3 Multisine approach — **215**
 - 7.1.4 Data presentation — **216**
- 7.2 Circuit elements and equivalent networks — **219**
 - 7.2.1 Basic elements — **219**
 - 7.2.2 Charge transfer resistance — **221**
 - 7.2.3 Randles circuit — **222**
 - 7.2.4 Mass transport control – Warburg impedance — **222**
 - 7.2.5 Coatings — **224**
- 7.3 Toolbox — **229**
 - 7.3.1 Kramer–Kronig test — **229**
 - 7.3.2 Software — **229**
 - 7.3.3 Challenges in modeling — **230**

Part III: Applications

- 8 Selected aspects: material science — 235**
 - 8.1 Corrosion — 235
 - 8.1.1 Fundamentals — 236
 - 8.1.2 Types of corrosion — 237
 - 8.1.3 Thermodynamics: Pourbaix diagram — 242
 - 8.1.4 Kinetics: Evans diagram, Tafel plot — 242
 - 8.1.5 Passivation and transpassivity — 246
 - 8.2 Methods to analyze corrosion — 247
 - 8.2.1 Corrosion potential measurement — 247
 - 8.2.2 Linear sweep voltammetry — 248
 - 8.2.3 Electrochemical impedance spectroscopy — 251
 - 8.2.4 Short-circuit current measurement — 252
 - 8.2.5 Critical pitting temperature measurement — 252
 - 8.2.6 Combined research methods — 253
 - 8.3 Methods to prevent corrosion — 253
 - 8.3.1 Cathodic protection — 253
 - 8.3.2 Anodic protection — 254
 - 8.3.3 Corrosion inhibitors — 254
 - 8.3.4 Protective barriers — 255
 - 8.4 Platinum electrochemistry — 255
 - 8.4.1 Platinum surface reactions — 255
 - 8.4.2 Electrode roughness — 259
 - 8.4.3 Degradation of platinum — 261
 - 8.4.4 Volcano plots — 262
- 9 Selected aspects: microfabrication and nanotechnology — 263**
 - 9.1 Electroless metal deposition — 264
 - 9.1.1 Nickel-phosphorus plating — 264
 - 9.1.2 Other electroless plating processes — 265
 - 9.1.3 Immersion plating — 266
 - 9.2 Electrodeposition — 267
 - 9.2.1 Electroplating of metals — 268
 - 9.2.2 Platinum black and hierarchical platinum structures — 273
 - 9.2.3 Anodically electrodeposited iridium oxide films — 276
 - 9.2.4 Underpotential deposition — 277
 - 9.2.5 Nanofilm deposition: electrochemical atomic layer deposition — 279
 - 9.2.6 Electrophoretic deposition — 282
 - 9.2.7 Electropolymerization — 283
 - 9.3 Subtractive electrochemical techniques — 284
 - 9.3.1 Electrochemical machining — 285

9.3.2	Electrochemical etching —	285
9.3.3	Electropolishing —	286
9.4	Nanoelectrodes, nanomaterials —	286
9.4.1	Carbon nanomaterials —	287
10	Selected aspects: microsystems and nanosystems —	289
10.1	Sensors —	289
10.1.1	Potentiometric ion-selective sensors —	290
10.1.2	Microsensors with gas-permeable membrane —	293
10.1.3	Biosensors —	295
10.1.4	Enzymatic biosensors —	295
10.1.5	Glucose meter —	302
10.1.6	Immunoassay, immunosensor —	303
10.1.7	Redox cycling —	304
10.1.8	Sensortechnology for different applications —	306
10.2	Actuators —	311
10.2.1	Release due to membrane corrosion —	312
10.2.2	Electrolysis actuators and pumps —	312
10.2.3	Bending beam actuators —	313
10.3	Neurotechnology —	314
10.3.1	Neural activation: action potential —	314
10.3.2	Neural recording by electrodes —	315
10.3.3	Neural stimulation by electrodes —	316
10.3.4	Neurotransmitter monitoring —	319
10.3.5	Sensing by electrodes from neural implants —	323
11	Selected aspects: energy applications —	325
11.1	Energy conversion —	325
11.1.1	Fuel cells —	325
11.1.2	Electrolysis —	328
11.2	Energy storage —	330
11.2.1	Batteries —	330
11.2.2	Redox flow batteries —	334
11.2.3	Supercapacitors —	335
11.2.4	Ragone plot —	336
A	Reference data —	339
A.1	Standard reduction potentials —	339
A.1.1	Alphabetically sorted —	340
A.1.2	Sorted by potential —	341
A.2	Dissolved gases —	343
A.2.1	Solubility —	343

A.2.2 Salting-out effect — 345

B Instrumentation — 347

B.1 Operational amplifier primer — 347

B.2 Ground and virtual ground — 352

Bibliography — 353

Index — 369

Nomenclature — 375

List of tasks — 383

Acknowledgment — 385
