

Part I Concepts

1	Introduction	3
1.1	The Historical Development of Thermal Storage Systems for Medium and High Temperatures	6
1.2	Application Areas	12
1.3	Classification of Storage Concepts	15
1.4	Characterization and Assessment of Storage Systems	20
1.5	Economic Aspects	25
	References	27
2	Liquid Storage Media	29
2.1	Candidate Storage Fluids	30
2.2	Concepts for Liquid Storage Media	39
2.3	Two Tank Storage Systems	41
2.3.1	Thermal Oil Systems	41
2.3.2	Molten Salt Systems	43
2.4	Research and Development	57
2.5	Molten Salts as Liquid Storage Media	61
2.5.1	Thermophysical Properties	61
2.5.2	Thermal Stability	65
2.5.3	Corrosion Behavior	68
2.5.4	Safety Aspects	70
2.5.5	Environmental Aspects	71
	References	72
3	Solid Storage Media	77
3.1	Candidate Storage Materials	78
3.2	Concepts for Solid-State Storage Systems	83
3.3	Regenerator Type Storage Systems	84
3.3.1	Stacked Bricks	90
3.3.2	Packed Bed	93
3.3.3	Embedded Heat Exchanger	94
3.3.4	CellFlux	105

3.4	Active Storage Systems	107
3.5	Theoretical Analysis of Regenerator Type Solid Media Storage Systems	114
3.5.1	Physical Model.	114
3.5.2	Governing Equations	118
3.5.3	Constitutive Equations	120
3.5.4	Analytical Solutions.	123
3.5.5	Numerical Solutions.	126
	References.	128
4	Dual Media Storage	133
4.1	Types of Dual Media Storages	134
4.2	Pilot Scale Demonstration of Dual Media Storage Systems . . .	139
4.3	Theoretical Analysis of Dual Media Storage.	142
4.4	Outlook	147
	References.	149
5	Steam Accumulators	153
5.1	Basic Types of Steam Accumulators	154
5.1.1	Sliding Pressure Accumulator (Ruths Storage)	155
5.1.2	Expansion Type Storage.	156
5.1.3	Displacement Accumulator	157
5.2	Thermodynamics of Steam Accumulators.	158
5.2.1	Sliding Pressure Accumulator	158
5.2.2	Approximate Solutions for the Sliding Pressure Steam Accumulator	164
5.2.3	Expansion Type Storage.	171
5.3	Storage Vessels.	173
	References.	177
6	Latent Heat Energy Storage	179
6.1	Phase Change Materials.	183
6.2	Concepts for Latent Heat Storage	189
6.2.1	Extended Heat Transfer Surface Concepts	194
6.2.2	Encapsulation.	217
6.2.3	Intermediate Heat Transfer Fluid.	222
6.2.4	Active Systems.	224
6.3	Modeling of PCM Storage Systems.	230
	References.	237
7	Thermochemical Energy Storage	241
7.1	Reaction Systems for Thermochemical Energy Storage	243
7.1.1	Concentration/dilution Systems.	245
7.1.2	Methane Reforming	246
7.1.3	Ammonia Synthesis/dissociation.	248
7.1.4	Sulfur Based Systems	249
7.1.5	Hydroxides.	252

7.1.6	Carbonates	254
7.1.7	Metal Hydride Systems	254
7.1.8	Redox Systems	256
	References	260
8	Selection of Storage Concepts	263
8.1	Operating Temperature Range	263
8.2	Working Medium	265
8.3	Technical Development Status	268
8.4	Other Criteria	269
 Part II Applications		
9	Concentrating Solar Power Plants	273
9.1	CSP Systems	274
9.2	Storage for CSP	275
9.3	Research and Development Projects	281
9.4	Commercial CSP Facilities with Integrated Storage	290
9.5	Role of Thermal Storage for CSP Technology	295
9.6	Prospects of CSP with Integrated Thermal Storage	300
	References	301
10	Industrial Storage Applications	303
10.1	Basic Concepts for Improving Industrial Energy Efficiency Through Thermal Storage Systems	305
10.1.1	Supporting Waste Heat Integration	305
10.1.2	Increasing the Utilization Factor of Components	306
10.1.3	Support for Waste Heat Conversion	307
10.1.4	Integration of Renewable Energy	308
10.1.5	Increasing the Flexibility of Combined Heat and Power (CHP) Plants	309
10.1.6	Storage as Thermal Rectifier	310
10.2	Industrial Application Areas for Thermal Storage Systems	311
10.3	Examples for the Use of Storage Systems in Industry	313
10.3.1	Waste Heat Power Generation in the Cement Industry	314
10.3.2	Autoclaved Building Materials	320
10.4	Perspectives	325
	References	326
11	Systems for the Storage of Electrical Energy	327
11.1	State of the Art: Large-Scale Energy Storage	328
11.2	Basic Concepts for Electrical Energy Storage Based on Heat Storage	328
11.2.1	Power-To-Heat to Power (PHP)	329
11.2.2	Compressed Air Energy Storage (CAES)	332

11.2.3	Pumped Thermal Energy Storage (PTES).....	339
11.2.4	Liquid Air Energy Storage (LAES).....	355
11.3	Hybrid Concepts	358
11.4	Outlook	360
	References.....	361
12	Integration into Thermal Power Plants	365
12.1	Early Steam Power Plants	365
12.2	Modern Power Plants.....	368
12.3	Outlook	369
	References.....	370
13	Power to Heat Storage	371
13.1	Electrical Heat Storage for Space Heating.....	372
13.2	Electrothermal Storage for Process Heat.....	374
	References.....	375
14	Mobile Applications	377
14.1	Energy Supply for the Prime Mover in Vehicles	377
14.1.1	System Based on Steam Accumulators	378
14.1.2	Thermochemical Energy Storage: The Honigmann Locomotive	380
14.1.3	Stirling Systems for Road Vehicles	383
14.2	Thermal Management of Vehicles	384
14.3	Space Applications.....	386
14.4	Mobile Heat Storage for Heat Supply	389
	References.....	390
	Index.....	393
