

Contents

1. Introduction	1
I. Theoretical foundations	5
2. Phase equilibrium modeling	7
2.1. Modeling of the fugacity	8
2.1.1. Modeling the fugacity via the fugacity coefficient	8
2.1.2. Modeling the fugacity via the activity coefficient	10
2.1.3. PC-SAFT	12
2.2. Two-phase flash calculations	14
3. Surrogate modeling	17
3.1. Surrogate models	17
3.1.1. Linear regression models	18
3.1.2. Kriging	18
3.1.3. Artificial Neural Networks (ANN)	20
3.1.4. Support Vector Machines (SVM)	23
3.2. Sampling	25
3.2.1. One-shot designs	26
3.2.2. Sequential designs	28
3.2.3. Mixed adaptive sequential design	29
3.3. Validation	30
3.3.1. Assessment of the surrogate model quality	30
3.3.2. Sample distribution metric	32
4. Literature review	33
4.1. Surrogate modeling in chemical engineering	33
4.2. Surrogate modeling for thermodynamic computations	35

II. Surrogate modeling of phase equilibria	39
5. Surrogate modeling methods for phase equilibria	41
5.1. Indirect surrogate modeling method	41
5.2. Direct surrogate modeling method	41
6. Adaptive sampling	45
6.1. Exploration	45
6.2. Exploitation	45
6.2.1. Prediction variance	46
6.2.2. Candidate selection	47
6.3. Combination of exploration and exploitation	49
III. Case studies and results	51
7. Case studies	53
7.1. Hydroformylation of 1-dodecene	53
7.2. Transesterification of dimethyl carbonate	55
8. Surrogate modeling using the indirect method	57
8.1. Hydroformylation of 1-dodecene	57
8.1.1. LLE	57
8.1.2. GLE	75
8.2. Transesterification of dimethyl carbonate (VLE)	78
8.3. Summary and discussion	85
9. Surrogate modeling using the direct method	89
9.1. Hydroformylation of 1-dodecene	89
9.1.1. LLE	89
9.1.2. GLE	101
9.2. Transesterification of dimethyl carbonate (VLE)	104
9.3. Summary and discussion	108
IV. Application of surrogate models in simulation and optimization	111
10. Simulation and optimization of the hydroformylation process	113
10.1. Model quality comparison for the two surrogate modeling methods	113
10.2. Application of the surrogate models in process simulation	118
10.3. Application of the surrogate models in process optimization	122

10.4. Summary and discussion	127
11. Conclusion and outlook	129
11.1. Conclusion	129
11.2. Outlook	131
 V. Appendix	 133
A. Model parameters and sampling ranges	135
B. Other results for the indirect method	143
C. Other results for the direct method	147
Bibliography	158
