

1	Introduction	1
1.1	Thematic Background	1
1.2	Methods, Structure and Objectives	3
1.2.1	Methods	3
1.2.2	Structure	4
1.2.3	Objectives	6
2	The Severe Acute Respiratory Syndrome Corona Virus Type 2	9
2.1	Worldwide Incidence of the Novel Corona Virus	9
2.2	Aetiology and Transmission Paths	18
2.3	Disease Process and Symptomatology	21
2.3.1	Progression of the Corona Virus Disease 2019	22
2.3.2	Symptoms of the Corona Virus Disease 2019	24
2.4	Policies of Containing the Corona Virus Disease 2019	26
2.4.1	Clinical Diagnosis	26
2.4.2	Governmental Measures in Sweden and Germany	29
2.4.3	The Stringency Index	33
2.4.4	Vaccines and Vaccination Strategies	34
2.4.5	Mutations	40
2.5	Lethality in Corona Virus Disease 2019 Cases	43
2.5.1	Case-fatality in Corona Virus Disease 2019 Cases	44
2.5.2	Uncertainty in Case-fatality Computations	51
2.5.3	Excess Mortality	58
3	The <i>SIR</i> Model in Epidemic Modelling	65
3.1	The Basic <i>SIR</i> Model	66
3.1.1	Definition of the Basic <i>SIR</i> Model	66

3.1.2	Maximum number of infections in the Basic <i>SIR</i> Model	70
3.1.3	Incidence Rates	72
3.2	Simple Enhancements to the Basic <i>SIR</i> Model	73
3.2.1	<i>SIRD</i> Model	74
3.2.2	<i>SEIR</i> Model	74
3.2.3	<i>SEIS</i> Model	75
3.2.4	Stages Related to Disease Progression and Control Strategies	75
4	The SARS-CoV-2- fitted SEIR Model	79
4.1	Differences to the Basic <i>SIR</i> Model and Model Assumptions	80
4.2	Compartments and Transitions in the SARS-CoV-2-fitted <i>SIR</i> Model	81
4.2.1	Sojourn Times	82
4.2.2	Distributions of the Incubation Period and the Serial Interval	83
4.2.3	The Susceptible Compartments	87
4.2.4	The Exposed Compartments	89
4.2.5	The Asymptomatic Infectious Compartments	91
4.2.6	The Symptomatic Compartments	91
4.2.7	The Hospitalized Compartment	94
4.2.8	The Intensive Care Unit Compartment	94
4.2.9	The Recovered Compartment	95
4.2.10	The Compartment of Deceased Individuals	98
4.2.11	The Compartment of Vaccinated Individuals	98
4.2.12	Overview of Compartments	102
4.3	Transmission in the SARS-CoV-2-fitted Model	104
4.3.1	Transmission Risk	104
4.3.2	Contact, Quarantine and Isolation Rates	109
4.3.3	Transmission Rates	114
4.3.4	Time Delay	117
5	Model Specifications	121
5.1	Model Variants	122
5.1.1	Exclusion of Quarantine or the Quarantine Compartment	122
5.1.2	Pooling of Isolated and not Isolated Compartments	123
5.1.3	Exclusion of Unconfirmed Infected Cases	123

5.1.4	Pooling of Infected Compartments	124
5.2	Systems of Ordinary Differential Equations	125
5.2.1	Formulation of the Initial Value Problem	125
5.2.2	The $SVIHCDR$ Model and the $SV\tilde{A}_I I_1 HCDR$ Model	126
5.2.3	The SARS-CoV-2-fitted Model	130
5.2.4	Age Group Model	132
5.3	Reproduction Numbers	136
6	Parameter Estimation in <i>MATLAB</i>	145
6.1	Problem Formulation and Implementation Process	146
6.1.1	The Nonlinear Least Squares Approach to Compartment Models	147
6.1.2	The Implementation Process	150
6.2	Parameter Definitions and Bounds	151
6.2.1	Parameters in the $SIHCDR$ Model	151
6.2.2	Parameters in the $SVID$ Age Group Model	160
6.3	Compartment Size Predictions with the $SIHCDR$ Model	162
6.3.1	Prediction of the Second Wave	164
6.3.2	Prediction of the Third Wave	172
6.4	Compartment Size Predictions with the $SVID$ Age Group Model	196
6.5	Application of Non-Standard Solvers	203
6.5.1	Definition of Nonstandard Finite Difference Schemes	204
6.5.2	Implementation of a Nonstandard Finite Difference Scheme for the $SIHCDR$ Model	208
7	Markov Chain Epidemic Models	215
7.1	Multi-state Models	216
7.2	The Bayesian Inference Approach to Compartment Models	219
7.3	The Metropolis-Hastings Algorithm	223
8	Résumé	225
8.1	Conclusion	225
8.2	Future Work	229
	Bibliography	233
