Foreword	V
Preface	XI
List of Contributors	XIII

Part One Screening, Bioinformatics, Chemoinformatics, and Drug Design 1

1	Drug Discovery Approaches Toward Anti-Parasitic Agents	3
	<i>Andreas Rohwer, Richard J. Marhöfer, Conor R. Caffrey, and Paul M. Selzer</i>	
2	New Bioinformatic Strategies Against Apicomplexan Parasites	21
	<i>Thomas Dandekar and Ke Xiao</i>	
3	Sorting Potential Therapeutic Targets in Apicomplexa	35
	<i>Jan A. Hiss and Gisbert Schneider</i>	
4	Alternatives to Drug Development in the Apicomplexa	53
	<i>Theo P.M. Schettters</i>	

Part Two Metabolic Pathways and Processes Addressed by Current Drug-Discovery Approaches 75

5	Energy Metabolism as an Antimalarial Drug Target	77
	<i>Esther Jortzik and Katja Becker</i>	
6	Polyamines in Apicomplexan Parasites	97
	<i>Ingrid B. Müller, Robin Das Gupta, Kai Lüersen, Carsten Wrenger, and Rolf D. Walter</i>	

- 7 The Reducing Milieu of Parasitized Cells as a Target of Antimalarial Agents: Methylene Blue as an Ethical Drug 115**
Peter Meissner, Heike Adler, Denis Kasozi, Karin Fritz-Wolf, and R. Heiner Schirmer
- 8 Lipids as Drug Targets for Malaria Therapy 137**
Henri J. Vial, Diana Penarete, Sharon Wein, Sergio Caldarelli, Laurent Fraisse, and Suzanne Peyrottes
- 9 Targeting Apicoplast Pathways in *Plasmodium* 163**
Snober S. Mir, Subir Biswas, and Saman Habib
- 10 Lipoic Acid Acquisition and Glutathione Biosynthesis in Apicomplexan Parasites 187**
Janet Storm, Eva-Maria Patzewitz, and Sylke Müller
- 11 Antimalarial Drugs and Molecules Inhibiting Hemozoin Formation 205**
Uday Bandyopadhyay and Sumanta Dey
- 12 Exploiting the Vitamin Metabolism of Apicomplexa as Drug Targets 235**
Carsten Wrenger and Ingrid B. Müller
- 13 Vitamin Biosynthetic Pathways, the PLP Synthase Complex, and the Potential for Targeting Protein–Protein Interaction 251**
Ivo Tews and Irmgard Sinning
- 14 Targeting Prokaryotic Enzymes in the Eukaryotic Pathogen *Cryptosporidium* 271**
Suresh Kumar Gorla, Corey Johnson, Jihan Khan, Xin Sun, Lisa Sharling, Boris Striepen, and Lizbeth Hedstrom
- Part Three Drug Targets in Apicomplexan Parasites 287**
- 15 Novel Apicomplexan Phosphatases and Immunophilins as Domain-Specific Drug Targets 289**
Sailen Barik
- 16 Dehydrogenases and Enzymes of the Mitochondrial Electron Transport Chain as Anti-Apicomplexan Drug Targets 307**
Kathleen Zocher, Stefan Rahlfs, and Katja Becker
- 17 Calcium-Dependent Protein Kinases as Drug Targets in Apicomplexan Parasites 319**
Dominik Kugelstadt, Bianca Derrer, and Barbara Kappes

18	Protein Acylation: New Potential Targets for Intervention Against the Apicomplexa 335
	<i>Joana M. Santos, Christian Hedberg, and Dominique Soldati-Favre</i>
19	Drugs and Drug Targets in <i>Neospora caninum</i> and Related Apicomplexans 359
	<i>Joachim Müller, Norbert Müller, and Andrew Hemphill</i>
Part Four Compounds 373	
20	Subversive Substrates of Glutathione Reductases from <i>Plasmodium falciparum</i>-Infected Red Blood Cells as Antimalarial Agents 375
	<i>Elisabeth Davioud-Charvet and Don Antoine Lanfranchi</i>
21	Ferroquine: A Concealed Weapon 397
	<i>Christophe Biot, Bruno Pradines, and Daniel Dive</i>
22	Current Aspects of Endoperoxides in Antiparasitic Chemotherapy 413
	<i>Denis Matovu Kasozi, Stefan Rahlfs, and Katja Becker</i>
23	<i>Plasmodium</i> Hsp90 as an Antimalarial Target 431
	<i>G. Sridhar Prasad, Nicholas D.P. Cosford, and Sailen Barik</i>
24	Drug Discovery Against <i>Babesia</i> and <i>Toxoplasma</i> 453
	<i>Mohamad Alaa Terkawi and Ikuo Igarashi</i>
25	Search for Drugs and Drug Targets against <i>Babesia bovis</i>, <i>Babesia bigemina</i>, <i>Babesia caballi</i>, and <i>Babesia (Theileria) equi</i> 469
	<i>Sabine Bork-Mimm</i>
26	Orlistat: A Repositioning Opportunity as a Growth Inhibitor of Apicomplexan Parasites? 481
	<i>Christian Miculka, Hon Q. Tran, Thorsten Meyer, Anja R. Heckerroth, Stefan Baumeister, Frank Seeber, and Paul M. Selzer</i>
27	Recent Drug Discovery Against <i>Cryptosporidium</i> 493
	<i>Jean-François Rossignol, J. Edward Semple, Andrew V. Stachulski, and Gilles Gargala</i>
	Index 513
