

Contents

1	Introduction	1
1.1	Fold-thrust belts, structure cross sections.....	1
1.2	Two companion books, acknowledgments.....	1
1.3	Fold-thrust belt ventures: world map	2
1.4	Models, illustrations, inventories	2
1.5	Recording fold-thrust belt data	3
1.6	Snip restoration	5
1.7	Fold-thrust belt geology and formation fluids.....	6
1.8	Geoscience textbooks.....	8
1.9	Basin studies: deep and shallow.....	10
1.10	Fluid migration in sedimentary basins	11
1.11	The seismograph invented the fold-thrust belts	11
1.12	Pre-seismic interpretations: legal aspects.....	11
1.13	Private industry encounters state authorities.....	12
1.14	Land, lease terms, joint ventures	13
1.15	Organizing fold-thrust belt (FTB) exploration: ranking the tasks.....	13
1.16	Industry and global petroleum resources.....	13
1.17	New petroleum and gas fields in the on-shore FTB setting	14
2	Bigmap: North American Cordillera	15
2.1	Cordilleran model.....	15
2.2	Cordilleran segments and provinces.....	16
3	Great Basin and Nevada.....	17
3.1	Overview	17
3.2	Inventory data and order of presentation.....	18
3.3	Presented paper: thrust belt of Central Nevada.....	20
3.4	Data base and references	20
3.5	Rocks and fluids	21
3.6	Cordilleran setting and plate tectonics	23
3.7	Fronts and stages of the Cordilleran FTB	24
3.8	Basement highs	24
3.9	Thermal stratigraphy and extensional tectonics.....	24
3.10	Structural styles.....	25
3.11	Nevada: petroleum potential	25
3.12	Nevada: industry needs, COCORP data, and a large fold.....	26
3.13	Nevada, the Cordillera, and the legacy of Peter Misch.....	28
3.14	Nevada inventory	28
4	Montana or Northern Rockies	29
4.1	Overview	29
4.2	Montana Cordilleran topics.....	29

4.3	Regional geology.....	30
4.4	External zone, wedge thickness, bulk strain.....	30
4.5	Tectonic separation on the Lewis thrust in Canada.....	32
4.6	Where is the trailing edge of the foreland-basement top?.....	33
4.7	Detached folds in the Threeforks-Townsend loop.....	33
4.8	Detailed mapping in the Threeforks-Townsend loop.....	36
4.9	Stringers of tight folds embedded into the Beltian wedge.....	36
4.10	Biot-Skipp folds: a new and distinct tectonic style.....	37
4.11	Juxtaposing Cordilleran and hercynide Externide FTB.....	38
4.12	Fold styles in an internide area of the Cordillera.....	38
4.13	Montana and British Columbia: Purcell fold styles.....	39
4.14	Glacier-Missouri frontal belt: a thin disturbed belt?.....	39
4.15	Southern Montana overlap zone (C. J. Schmidt).....	42
5	Canadian Rocky Mountains (CRM).....	45
5.1	To the Geological Survey of Canada: Thank you.....	45
5.2	Overview and data.....	45
5.3	Petroleum reserves and petroleum industry.....	46
5.4	Geoscience literature.....	47
5.5	The Great Northward Decline.....	49
5.6	Location and Cordilleran geodynamics.....	49
5.7	Terrane docking and Cordilleran bulk strain.....	50
5.8	Stratigraphy: Pre-Cordilleran passive margins and Cordilleran foredeep.....	50
5.9	Allochthonous rock panel and thrust sheets.....	51
5.10	Inventory of structure cross sections.....	53
5.11	Northern Rockies, their main ranges and their basement.....	53
5.12	Duplex structures are antiformal thrust stacks.....	53
5.13	Large folds, detached Biotian folds, box folds.....	53
5.14	Non-metamorphic kink folds.....	54
5.15	West edge of the CRM Allochthon: steep zone or backstay?.....	54
5.16	Tight, polyphase, or transpositional folds.....	54
5.17	Western CRM and Selkirks Mountains: fan-shaped, folded, and re-imbricated steep zone.....	54
5.18	Mesosopic fabric data suggest retrocharriage.....	55
5.19	Vertical Style Zonation (VSZ).....	56
5.20	Erosion during thrust stacking.....	56
5.21	Objections against the Vertical Style Zonation?.....	56
5.22	Polyphase and pre-thrust folds at thrust fronts.....	56
5.23	Complex thrust fronts: folds and back-limb thrusts.....	57
5.24	Source and shape of inventory data.....	57
5.25	Inventory: bulk strain and structural styles.....	57
5.26	CRM seen as a pre-seismic type locality.....	58
6	Alaska Brooks Range (ABR).....	62
6.1	Overview.....	62
6.2	Global significance and literature.....	65
6.3	Inventory of cross sections and Cordilleran model.....	67
6.4	Cordilleran tectonics.....	67
6.5	Two versions of the Dahlstromian style.....	67
6.6	Plate tectonics.....	67
6.7	Angayucham: world-class ophiolite.....	68

6.8	Dating Brooks-Range tectonics: slow understanding	70
6.9	Better methods confirm Brookian orogeny as early	70
6.10	ABR basement structure, envelope tectonics, foreland flexure	70
6.11	Quantifying uplift of a core zone and decay of its Bouguer Moho root	71
6.12	Doonerak fenster: focal point of Brooks Range	71
6.13	Doonerak fenster and Brooks Front Range: unclear details	72
6.14	Brooks Range and its orogeny: a definition	73
7	Alps of Europe	74
7.1	Diagnosis and problems	74
7.2	Crustal Alps: Four tectonic elements	74
7.3	Geological significance	74
7.4	Alps, a minor active collision orogen	76
7.5	Alpine stratigraphy	77
7.6	Basin shapes and crustal structure	79
7.7	Alpine "lid" or floater	79
7.8	Alps: more tectonics	84
8	Alpine petroleum geology "Où est le Pétrole?"	86
8.1	Overview	86
8.2	Alpine source rocks	86
8.3	Productive structures, prospective structures	87
8.4	Alpine wells dry and abandoned	87
8.5	Three Alpine landmarks/wildcats	87
8.6	Visco-elastic load flexure unifies Alpine tectonics	88
8.7	Map-view curvature of Sommaruga (Moho) contours	88
9	Alps of Europe-North and East	89
9.1	Geological setting	89
9.2	Post-seismic petroleum venture: no access to seismic data	89
9.3	Field-checked Alpine cross sections	90
9.4	East-Alpine FTB: geological issues resolved and unresolved	90
9.5	Two Alpine geologists	90
9.6	North Alpine inventory (Germany, Austria): structural geology	91
9.7	Austrian inventory: never accomplished	91
10	Alps of Europe: south	92
10.1	Friuli – Lombardia inventories	92
10.2	South-Alpine consortial venture 1986–1994	92
10.3	South-Alpine inventories of seriated cross sections	93
10.4	South-Alpine structural style: Lombardia, Veneto, Friuli, Istria	93
10.5	Southeast-Alpine seismicity	94
10.6	Lombardia: seismic data and tectonics	94
11	Alps of Europe: west	97
11.1	Setting of basins and mountains	97
11.2	People	97
11.3	West-Alpine projects and data	97
11.4	Annecy permit for Esso-Standard-EssoREP	97
11.5	SEAG-Anschutz venture in the Swiss Molasse basin	98
11.6	Trans-Alpine seismic control	98
11.7	West-Alpine foreland structure: flexure with bumps and hollows	98

11.8	West-Alpine main thrust: collisional changes in structure	99
11.9	West-Alpine basement massifs	99
11.10	Ductile polyphase layer at the basement top	99
11.11	Estimating the depth of the ductile remnants	99
12	Pyrenees	101
12.1	Overview	101
12.2	Present account and its data base	101
12.3	Pyrenees: a collision orogen without oceanic crust	102
12.4	Pre-Pyrenean plate setting	102
12.5	South flank: Salinar and more	103
12.6	North flank: Orogenic backstay within Atlantic passive margin	103
12.7	Tectonics of the Aquitaine basin	104
12.8	Circum-Pyrenean petroleum systems, reserves, stratigraphy	105
12.9	Pyrenean exploration ventures (1961–1967)	105
12.10	Texas Union: successor venture (1997–1998)	105
13	Hellenides, Dinarides (Greece, Albania)	106
13.1	Notes by Constantinos Nikolaou and DHR	106
13.2	Tectonic overview	106
13.3	Albano-Hellenides: petroleum potential	107
13.4	Albano-Hellenides: regional geology	107
13.5	Facies zones and thrust panels	108
13.6	Top panel of thrust stack	109
13.7	Olonos-Pindos ophiolite	109
13.8	Pindos sediment series	109
13.9	Pelagonian unit	109
13.10	Ambelakia series	109
13.11	Mount Olympus Window (MOW) footwall series	110
13.12	External and prospective units	110
13.13	Hellenic trench and trench innerwall	110
13.14	Recent gas discoveries by Hellenic Petroleum Co (2010–2012)	113
14	Apennine of Italy	114
14.1	Overview	114
14.2	Plate tectonics	114
14.3	Literature	114
14.4	Apennine-related ventures	115
14.5	Apennine FTB: volcanism, Tyrrhenian, spreading, seismicity	115
15	Sahara Atlas – Algeria, Morocco, North Africa	116
15.1	Overview	116
15.2	Maghreb: plate tectonics and geological data	117
15.3	Benoud Petroleum Concession: Sahara Atlas, Algeria	118
15.4	ATLAS: digital plate model of the Maghrebian	121
15.5	Sahara Atlas: structure and choice of assumed style	122
15.6	Atlasian strike-slip tectonics? – Unlikely	122
15.7	Stratigraphy: Sahara Atlas	123
15.8	Atlasian salinar: halokinetic and orogenic structures	123
15.9	Post-salinar	125
15.10	Atlasian Mesozoic development	125

15.11	Atlasian halokinetic and orogenic structures.....	125
15.12	Summary: surface structure and shape of salt basin.....	126
16	Tethyan Maroc-Morocco, Betica.....	127
16.1	Overview	127
16.2	Tectonic units	127
16.3	Petroleum and a decade of visits	128
16.4	West part of Tethyan suture	128
16.5	Stacked Rif allochthon	128
16.6	Ketama unit: a steep zone and triple junction? – A rootless rotation zone?	129
16.7	Alboran Sea, Rifean-Betic Loop: emerging mantle diapir	129
17	Pakistan: Muslimbagh, Makran, Sulaiman, Kohlu.....	131
17.1	Overview	131
17.2	Pakistan: geological data.....	132
17.3	Pakistan: work projects 1975–1990	132
17.4	Pakistan: data sources for present book	133
17.5	Chaman belt: structure and seismicity.....	133
17.6	Chaman stratigraphy.....	133
17.7	Chaman plate tectonics.....	134
17.8	Chaman strike-slip tectonics	135
17.9	Ophiolites in Pakistan, by DHR and Eldridge Moores	135
17.10	New study of Pakistan tectonics.....	136
17.11	Fold-thrust belt-data in Pakistan.....	140
17.12	Seismic data and Biot fold tectonics	141
17.13	Tight folds and Chaman strike-slip	142
17.14	Pakistani ophiolites: two sutures or one single suture?.....	142
18	Himalaya: never got there	144
19	Serrania del Interior de Venezuela	145
19.1	Geography, people.....	145
19.2	Petroleum	146
19.3	Tectonics and basin geology.....	146
19.4	More regional tectonics: structural styles.....	146
19.5	Petroleum exploration by PDVSA: a digital past.....	147
19.6	Venezuelan projects: 2001 to 2005.....	148
19.7	Petroleum geology.....	148
19.8	Cordilleran model for Venezuela.....	149
19.9	Basin studies in Venezuela	152
19.10	Structural inventory: Serrania del Interior.....	152
19.11	Structural inventory: salinar-detached Biot folds.....	155
19.12	Structural inventory: Ensenada de Barcelona	155
19.13	Caribbean Borderland: Cordillera of global significance.....	158
20	Blanquilla trough: a Bidround Item.....	159
21	Colombia	160
21.1	Overview	160
21.2	Trench-Trench-Trench triple junction	161

22	Bolivia: Northern Subandean and Alto Beni.....	162
22.1	Overview	162
22.2	Bolivian petroleum	167
22.3	Northern Subandean petroleum concession	169
22.4	Andean setting and sub-Andean structure.....	169
22.5	Setting of steep-slab subduction.....	169
22.6	Stratigraphy: overlapping passive-margin prisms.....	170
22.7	Foredeep fill.....	170
22.8	Crustal-load deflection	171
22.9	Sub-Andean belt: regional and detailed structure	171
23	Magallanes: Chile, Argentina.....	172
23.1	Geography	172
23.2	Petroleum	174
23.3	People	174
23.4	Notes from ADCO (Abu Dhabi) seismic course.....	174
24	Marathon, Ouachitas, Appalachians (MOA).....	179
24.1	Overview	179
24.2	Pangean plate tectonics: HMA fold-thrust belt	179
24.3	Pangean plate tectonics and Wegener's fit of continents.....	179
24.4	Greater Variscan or HMA belt: Geology	180
24.5	Petroleum geology and US energy industry.....	182
24.6	Books and ventures in the HMA system (1967–1992).....	182
25	Alleghanian (late Paleozoic) FTB of the Southern Appalachians.....	183
25.1	Overview	183
25.2	Appalachian FTB: building pre-digital and pre-seismic cross sections .	183
25.3	Folds	184
25.4	More fold data from Southern Appalachian FTB.....	185
25.5	Regional order of kinematic (cross-cutting) sequences	188
25.6	Applying a tectonic mechanism to the Appalachian FTB.....	188
25.7	Saltville and Pulaski thrust sheets: parts of a Mesonide unit	189
25.8	Externides: westward moving critically tapered wedge.....	189
25.9	Topographic slopes	189
26	Epilog: American and Tethyan fold-thrust belts.....	190
26.1	Personal aspects.....	190
26.2	Economic aspects	190
26.3	Futuristic aspects.....	190
26.4	Geological aspects.....	190
26.5	Extensional tectonics and gravity spreading	191
26.6	Chaos and collapsing mountain belts	191
26.7	Gravity-driven wedge of chaos	192
26.8	Last fly-by sketch	193
