

Contents

1	Introduction	1
1.1	Motivation and research-relevant topics	1
1.2	State-of-the-art in computational modeling of damage and fracture	3
1.2.1	Discrete modeling approaches	3
1.2.2	Continuous modeling approaches	6
1.3	Outline of the dissertation	9
2	Article 1:	
	A single Gauss point continuum finite element formulation for gradient-extended damage at large deformations	13
2.1	Abstract	14
2.2	Introduction	14
2.3	Gradient-extended damage plasticity model	19
2.4	Governing equations	23
2.4.1	Analogy between micromorphic balance and stationary heat equation	23
2.4.2	Parametrization of the element geometry	25
2.4.3	Weak form of the multi-field problem	26
2.5	Interpolation	27
2.5.1	Compatible strain field	29
2.5.2	Enhanced assumed strain field	30
2.5.3	Micromorphic damage gradient field	31
2.6	Single Gauss point concept	31
2.6.1	Modification of the weak form and polynomial representation	32
2.6.2	Discretized weak form	38
2.6.3	Program flow	41
2.7	Representative numerical examples	43
2.7.1	Single-edge notched specimen	43
2.7.2	Tensile specimen with imperfection	47
2.7.3	Symmetrically notched specimen	53

2.7.4	Asymmetrically notched specimen	58
2.8	Conclusion	64
2.9	Appendix	65
2.9.1	Coefficients of the shape function vector	65
2.9.2	Taylor expansion of the gradient of the virtual micromorphic damage field	66
2.9.3	Determination of the element residual vectors and stiffness matrices	67
2.9.4	Operators resulting from the geometric nonlinearity	69

3 Article 2:

	A reduced integration-based solid-shell finite element formulation for gradient-extended damage	71
3.1	Abstract	72
3.2	Introduction	72
3.3	Gradient-extended two-surface damage plasticity model	75
3.4	Solid-shell formulation	78
3.4.1	Weak forms – three-field functional	78
3.4.2	Interpolation and parametrization of the element geometry	79
3.4.3	Modification and enhancement of the standard interpolation	82
3.4.4	Reduced integration concept	84
3.4.5	Discretized weak forms	87
3.4.6	Program flow	89
3.5	Representative numerical examples	91
3.5.1	Brittle damage	92
3.5.2	Ductile damage	102
3.6	Conclusion	108
3.7	Appendix	109
3.7.1	Shape function coefficients	109
3.7.2	Locking effects in solid-shells	109
3.7.3	ANS-modified strain field	110
3.7.4	Micromorphic $\mathbf{B}$ -operator	111
3.7.5	Hourglass material tangent	112
3.7.6	Hourglass stabilization matrices	113
3.7.7	Element stiffness matrices	113

4 Article 3:

Gradient-extended damage analysis with reduced integration-based solid-shells at large deformations 115

4.1 Abstract 116

4.2 Introduction 116

4.3 Gradient-extended damage-plasticity model 119

4.4 Solid-shell finite element formulation 120

4.4.1 Weak forms - three-field functional 120

4.4.2 Interpolation, parametrization and kinematics 122

4.4.3 Polynomial approximation 125

4.4.4 Discretized weak forms and reduced integration 127

4.5 Numerical examples 129

4.5.1 Annular plate 129

4.5.2 Hexcan 135

4.5.3 Out-of-plane stretching and tearing of a plate 144

4.6 Conclusion 146

4.7 Appendix 146

4.7.1 Specification of the Helmholtz free energy 146

4.7.2 Influence of the number of Gaussian points for the hexcan example in Sec. 4.5.2 using Q1STs 148

5 Conclusions and Outlook 151
