

Contents

1	Introduction	1
2	Slopes	7
2.1	Formation of slopes	7
2.2	Loose material	13
2.2.1	Rolling soils	15
2.2.2	Soils with cohesive components	17
2.2.3	Terrain fracture	23
2.3	Rock	29
2.3.1	No fissure filling	33
2.3.2	Rolling fissure filling	36
2.3.3	Cohesive fissure filling	37
2.3.4	Spatial sphere presentation	39
2.4	Building in permafrost	51
2.4.1	Permafrost	51
2.4.2	Wurmkogel - Oetztal valley (Tyrol)	55
3	Excavations	63
3.1	Boundary conditions	64
3.1.1	Subsoil Investigation	64
3.1.2	Groundwater and slope water	64
3.1.3	Neighbor buildings	67
3.1.4	Construction cranes	71
3.1.5	Short- and long-term fuses	74
3.1.5.1	Short-term fuses - temporary	74
3.1.5.2	Long-term fuses - permanent	74

3.2	Coverage and networking	75
3.2.1	Free-hanging cover	75
3.2.2	Rock cross-links	77
3.2.3	Rockfall nets	87
3.3	Impact wall	102
3.4	Retaining wall	105
3.5	Stone walls	111
3.5.1	Raw stone wall	111
3.5.2	Mortared stone wall	113
3.6	Gabions (stone baskets)	117
3.7	Cushion wall	118
3.8	Geocells	125
3.9	Reinforced earth	129
3.10	Precast wall in front	130
3.11	Timber anchor wall	137
3.12	Krainerwall	142
3.13	Nailed shotcrete	146
3.13.1	Principle of production	146
3.13.2	Calculation	148
3.13.3	Execution with structural steel mesh reinforced shotcrete	162
3.13.4	Design with fiber concrete	164
3.13.4.1	Steel fiber concrete	164
3.13.4.2	Plastic fiber concrete	166
3.14	Comparison of different types of securing	171
4	Securing spatial terrain slopes	181
4.1	Simple theoretical consideration	181
4.2	Spatial slope stabilization	185
4.2.1	Road protection for parking lot	185
4.2.2	Securing the excavation pit for a ski depot	187
4.2.3	High slope stabilization for a hotel	189
4.3	Implications for practice	191

5	Excavation Shoring	195
5.1	Sheet pile wall	213
5.2	Soldier pile wall	219
5.3	Pile wall	220
5.4	Diaphragm wall	223
5.4.1	Production	224
5.4.2	Open slit	227
5.4.3	Vertical force transfer	232
5.4.4	Horizontal forces and moments	232
5.4.4.1	Testing of diaphragm wall elements	233
5.4.4.2	Application examples	233
5.5	Cutting wall	238
6	Underpinning	243
6.1	Conventional concrete discs	244
6.2	Nailed shotcrete	245
6.3	High-pressure soil grouting	248
7	Shaft structures	265
7.1	Spatial earth pressure	266
7.2	Flat side walls	274
7.3	Curved side walls	282
8	Anchors and soil nails	287
8.1	Classification	287
8.1.1	Small anchors or dowels	288
8.1.2	Medium load anchor	288
8.1.3	Ground and rock anchors	290
8.1.4	Heavy-duty anchors	291
8.2	Soil nails	292
8.2.1	Solid bar nail	292
8.2.2	Hollow bar nail	295
8.2.3	GRP Anchors	299

8.3	Anchors	301
8.3.1	Bar anchor	302
8.3.2	Strand anchor	305
8.4	Small pile - GEWI pile	307
8.5	Durability of anchors	309
8.6	Monitoring of anchors	311
8.6.1	Monitoring the load capacity	311
8.6.1.1	Qualification test	312
8.6.1.2	Acceptance test	314
8.6.1.3	Lift-off test	315
8.6.1.4	Load cells	316
8.6.2	Monitoring corrosion	318
8.6.2.1	General	319
8.6.2.2	Electrochemistry	320
8.6.2.3	Types of corrosion	321
8.6.2.4	Potential measurement with electrodes	327
8.6.2.5	Polarization measurement with electrodes	333
8.6.3	For double corrosion-protected armatures	336
8.6.4	For simply corrosion-protected anchors	338
8.7	Extending the service life of anchors	341
8.7.1	general information on CCP	342
8.7.2	CCP for double corrosion protected anchors	344
8.7.3	CCP for simply corrosion-protected anchors	345
	Appendix	347
	List of Figures	349
	Bibliography	367
	Index	373
