

1	Introduction	1
1.1	Motivation and Overview	1
1.2	Objectives and Document Outline	2
2	Design and Operation of Assembly Lines	5
2.1	Production and Layout Configurations	5
2.2	Production and Layout Configuration in the Automotive Industry	7
2.3	Balancing of Assembly Lines	10
2.4	Influence of Multiple Products	14
2.5	Sequencing in the Automotive Industry	21
2.6	Buffers	25
3	Literature Review on Assembly Line Balancing Under Uncertainty	29
3.1	Scope and Structure	29
3.2	Existing Surveys in the Literature	30
3.2.1	Balancing	30
3.2.2	Master Scheduling	35
3.2.3	Rebalancing	36
3.2.4	Sequence Planning or Sequencing	36
3.2.5	Resequencing	37
3.2.6	Buffer Allocation	38
3.3	Classification Scheme	41
3.4	Uncertainties in Single-model Production Systems	44
3.4.1	Uncertainties in the Balancing	44
3.4.2	Uncertainties in the Buffer Allocation	54

3.5	Uncertainty in Multiple-model Production Systems	56
3.5.1	Uncertainty in the Processing Time	57
3.5.2	Uncertainty of the Production Sequence	58
3.5.3	Uncertainty of Demand	58
3.6	Uncertainties of the Disassembly Process	61
3.7	Gaps and Contributions to the Literature	63
4	Balancing Under Full Sequencing Control	65
4.1	Problem Definition	65
4.2	Solution Algorithm	71
4.2.1	Benders' Decomposition	71
4.2.2	Combinatorial Benders' Decomposition	74
4.2.3	Proposed Algorithm	76
4.3	Tests and Results	86
4.3.1	Dataset	87
4.3.2	Strength of the Partial Cuts	88
4.3.3	Effect of The Local Search	91
5	Balancing Under No Sequencing Control	97
5.1	Problem Definition	97
5.2	Evaluating the Expected Utility Work	102
5.3	Properties of the Total Cost Function	105
5.4	Solution Algorithm	109
5.4.1	Node Enumeration Scheme	110
5.4.2	Length Optimization	112
5.4.3	Iterative Computation of Nodes	117
5.5	Tests and Results	118
5.5.1	Dataset	118
5.5.2	Results	122
6	Controlling Production Sequences Using Buffers	133
6.1	Problem Description	133
6.1.1	Problem Classification and System Description	134
6.1.2	Due Date Definition	136
6.1.3	Problem-State Definition, Transition Function, and Solution Policy	137
6.2	Simulation Model	139
6.3	Heuristic Rules	140

6.4	Improvement Approaches	141
6.4.1	Expression for the Product Selection Policy	141
6.4.2	Improvement Procedures	142
6.5	Tests and Results	143
6.5.1	Simulation Length and Number of Repetitions	143
6.5.2	Implementation Details	144
6.5.3	Quality of the Heuristic Rules	149
6.5.4	Improving Expression-Based Rules Using Local Search	152
6.5.5	The Lookahead Procedure	156
6.5.6	Summary of the Results	159
7	Conclusion	161
7.1	Summary, Objectives, and Conclusions	161
7.2	Limitations and Future Works	163
	Bibliography	167
