2.2	Fields of Action for the Transition to a Low-Emission Economy [WHERE].	37
2.2.1	Business Strategy	38
2.2.2	Operational Processes	42
2.2.3	Governance and Public Engagement	44
2.3	Technology Fields of Decarbonisation [WHERE].	46
2.3.1	Renewable Energies and Energy Management	47
2.3.1.1	Decarbonizing an Energy System in Three Phases.	47
2.3.1.2	Transition from Phase 2 to Phase 3.	48
2.3.2	Storage Solutions	51
2.3.3	Sector Coupling	53
2.4	Target Vision Decarbonization [WHICH]	56
2.4.1	Target Visions Provide Orientation for Decarbonization.	56
2.4.2	Target Vision of Technology-Neutral Decarbonization	57
2.4.3	Derived Fields of Action for Technology-Neutral Decarbonization	60
3	Alternative Course of Action: Digital Decarbonization.	63
3.1	Energy Flows as an Underestimated Lever	63
3.2	Cross-Sector Modeling of Innovative Technology Options.	65
3.2.1	Objective Function.	65
3.2.2	System Model of Energy Demands	67
3.2.3	System Model for Energy Conversion Plants	70
3.2.4	System Model for Energy Transport Infrastructure.	73
3.2.5	System Model for Energy Saving Measures	74
3.2.6	System Model for Structural Adjustments in Industry.	75
3.2.7	System Model for CO ₂ -negative Technologies	75
3.3	The Idea of Data-Based Decarbonization	76
3.3.1	Global Geodatabase for Energy Systems.	77
3.3.1.1	Energy Demand—Consumption Profiles and Spatial Distribution	78
3.3.1.2	Installed Generation Capacities and Expansion Corridors	81
3.3.1.3	Generation Profiles from Renewable Resources.	82
3.3.2	Database on Technologies and Their Developments	88
3.3.3	Regulatory Boundary Conditions and Scenario Frameworks	89
3.3.4	Challenges and Development Potential	90
3.3.4.1	Modeling Depth and Parameter Uncertainties	90
3.3.4.2	Automated Data Acquisition and Data Preparation	91
4	Decarbonization Through Data-Based Optimization	93
4.1	Introduction to the Modeling Methodology.	94
4.1.1	Defining the Object of Consideration	94

4.1.2	Requirements for the Optimization Method	95
4.1.3	Linear Programming	96
4.1.4	Digital Decarbonization Method	97
4.1.5	Underlying Assumptions and Limitations of the Method	104
4.1.6	Further Aspects and Literature References	105
4.1.7	Implementation	106
4.1.8	Focus: Modeling CO ₂ Emissions and General Considerations Concerning the Decarbonization of Energy Systems	106
4.2	Digital Decarbonization as Part of an Analysis and Consulting Project	110
4.3	From Energy System Design Consulting to Optimized Operation	112
5	Macro View Including Use Cases.	115
5.1	Decisive Aspects of Macromodeling	117
5.1.1	Climate Goals and Technology Neutrality Approach	118
5.1.2	Migration Paths and Time Frame Under Consideration	119
5.1.3	Security of Supply	120
5.2	The Role of Sector Coupling in Achieving Climate Goals—Example Germany	121
5.2.1	Scenario Framework and Sensitivities	122
5.2.2	Levers for Cost-Minimized Decarbonization.	125
5.2.3	Results Electricity Sector.	128
5.2.4	Results Heating Sector	132
5.2.5	Results Transport Sector	134
5.2.6	Discussion and Evaluation of the Results	136
5.3	Comparison of Selected Country Energy Systems	139
5.3.1	Renewables in Middle East Countries Dominated by Oil and Gas Exports	139
5.3.1.1	Motivation and Characteristic Properties	139
5.3.1.2	Scenarios	140
5.3.1.3	Results.	145
5.3.2	How Renewable Expansion Reverses Energy Flows—Taking South Africa as an Example	149
5.3.2.1	Motivation of Regionally Resolved Modeling	149
5.3.2.2	Methodology for Identifying Regional Clusters	150
5.3.2.3	Case Study of Regionalized Decarbonization at the Example of South Africa.	151
5.3.3	Renewables in Countries with Moderate Generation Potential—Example Malaysia	154
5.3.3.1	Motivation and Characteristic Properties	154
5.3.3.2	Scenarios	157
5.3.3.3	Results.	158

5.3.4	Energy System Archetypes	160
5.3.4.1	Motivation	163
5.3.4.2	Methodology for the Identification of Archetypes	163
5.3.4.3	Description of the Energy System Archetypes in Comparison with Neighboring Geographic-Economic Regions	164
5.3.4.4	Modeling the Archetypes in an Energy System Optimization Model	167
5.3.4.5	Discussion of the Potential and Limitations of Archetypes	169
6	Micro View Including Use Cases	173
6.1	Special Features of Digital Decarbonization in Micro-Level Use Cases	174
6.2	First Application of the Digital Decarbonization Method at Micro Level Using the Example of an Airport in the United States	174
6.2.1	Introduction, Scenarios and Assumptions	174
6.2.2	Results and Discussion	178
6.3	Significance of Regulation Using a Dairy as an Example	181
6.3.1	Introduction, Assumptions and Scenarios	181
6.3.2	Results and Discussion	185
6.4	How the Decarbonization of Urban Heat Supply Can Succeed	188
6.4.1	Introduction to Urban Heat Supply in Germany	188
6.4.2	Technologies to Decarbonize District Heating	189
6.4.3	Sites in the Technology-Neutral View	191
6.4.4	Results and Discussion	193
6.5	Concluding Remarks on the Micro-Level Cases	196
7	Perspective on “Fewer Greenhouse Gases”: Closing Considerations	197
