

C. Grosche F. Steiner

Handbook of Feynman Path Integrals

Springer

Table of Contents

1 Introduction	1
2 General Theory	23
2.1 The Feynman Kernel and the Green Function	23
2.2 The Path Integral in Cartesian Coordinates	31
2.3 Gaussian Path Integrals and Zeta Function Regularization	37
2.4 Evaluation of Path Integrals by Fourier Series	39
2.5 Path Integration Over Coherent States	44
2.6 Fermionic Path Integrals	55
2.7 The Path Integral in Spherical Coordinates	63
2.8 The Path Integral in General Coordinates	67
2.9 Transformation Techniques	76
2.10 Exact Path Integral Treatment of the Hydrogen Atom	87
2.11 The Path Integral in Parabolic Coordinates	88
3 Basic Path Integrals	93
3.1 The Free Particle	94
3.2 The Quadratic Lagrangian	95
3.3 The Radial Harmonic Oscillator	99
3.4 Path Integration Over Group Manifolds	102
4 Perturbation Theory	123
4.1 Path Integration and Perturbation Theory	124
4.2 Summation of the Perturbation Series for δ - and δ' -Potentials	127
4.3 Partition Functions and Effective Potentials	132
4.4 Semiclassical Expansion About the Harmonic Approximation	134

5 Semiclassical Theory	141
5.1 Semiclassical Theory and Quantum Chaos	141
5.2 Semiclassical Expansion of the Feynman Path Integral	143
5.3 Semiclassical Expansion of the Green Function	149
5.4 The Gutzwiller Trace Formula	151
6 Table of Path Integrals	155
6.1 General Formulæ	162
6.2 The General Quadratic Lagrangian	173
6.3 Discontinuous Potentials	217
6.4 The Radial Harmonic Oscillator	225
6.5 The Pöschl–Teller Potential	240
6.6 The Modified Pöschl–Teller Potential	244
6.7 Motion on Group Spaces and Homogeneous Spaces	258
6.8 Coulomb Potentials	277
6.9 Magnetic Monopole and Anyon Systems	295
6.10 Motion in Hyperbolic Geometry	304
6.11 Explicit Time-Dependent Problems	322
6.12 Point Interactions	327
6.13 Boundary Value Problems	347
6.14 Coherent States	353
6.15 Fermions	361
6.16 Supersymmetric Quantum Mechanics	363
References	367
List of Symbols	425
Subject Index	429
Author Index	439
