Part I Digital Holography

1 Point Source Digital In-Line Holographic Microscopy	3
Manfred H. Jericho and H. Jürgen Kreuzer	
1.1 Introduction	3
1.2 DIHM Hardware	6
1.3 Hologram Reconstruction	7
1.4 Resolution and Depth of Field	9
1.5 Deconvolution	13
1.6 Immersion Holography	14
1.7 Phase images	15
1.8 4-D Imaging	16
1.9 Applications in Microfluidics	17
1.10 Biology	18
1.11 Submersible DIHM	20
1.12 Recent progress	21
1.13 Summary and Discussion	22
Appendix: Kirchhoff–Helmholtz Reconstruction Algorithm	24
Introduction	24
Coordinate Transformation	25
Discretization	26
Interpolation	26
Convolution	27
References	28
2 Digital Holographic Microscopy Working with a Partially Spatial Coherent Source	31
Frank Dubois, Catherine Yourassowsky, Natacha Callens, Christophe Minetti, Patrick Queeckers, Thomas Podgorski, and Annick Brandenburger	
2.1 Introduction – Objectives and Justifications	31
2.2 Optical Setups and Digital Holographic Reconstructions	32

2.2.1	Digital Holographic Microscope Working with a LED	32
2.2.2	Digital Holographic Microscope Working with a Laser Beam Incident on a Rotating Ground Glass	34
2.2.3	Digital Holographic Reconstruction	35
2.3	Benefits of the Partially Spatial Coherence for the DHM in Transmission	36
2.3.1	Spatial Frequency Filtering	36
2.3.2	Multiple Reflection Removal	39
2.3.3	Coherent Noise Removal	41
2.4	Experimental Demonstrations and Applications	42
2.4.1	Biomedical Applications	42
2.4.2	Hydrodynamic Flow of Micron Size Particles	47
2.4.3	Dynamics of Phospholipid Vesicles	49
2.5	Conclusions	55
	References	56
3	Quantitative Phase Contrast in Holographic Microscopy Through the Numerical Manipulation of the Retrieved Wavefronts	61
	Lisa Miccio, Simonetta Grilli, Melania Paturzo, Andrea Finizio, Giuseppe Di Caprio, Giuseppe Coppola, Pietro Ferraro, Roberto Puglisi, Donatella Balduzzi, and Andrea Galli	
3.1	Digital Recording and Numerical Reconstruction in DH	62
3.2	Phase Contrast Imaging and Quantitative Phase Microscopy by DH	65
3.2.1	Double Exposure Technique	66
3.2.2	Self-Referencing Method	66
3.2.3	2D Fitting Method	69
3.2.4	Numerical Lateral Shearing Method	72
3.2.5	Differential Holographic Interference Contrast	75
3.2.6	Synthetic Wavelength Holography	79
3.3	Conclusion	83
	References	83
4	Incoherent Digital Holographic Microscopy with Coherent and Incoherent Light	87
	Joseph Rosen and Gary Brooker	
4.1	Introduction	87
4.2	General Properties of Fresnel Holograms	89
4.3	Scanning Holography	91
4.4	Fresnel Incoherent Correlation Holography	95
4.5	Discussion and Conclusions	110
	References	111

Part II Phase Microscopy

5	Quantitative Phase Microscopy for Accurate Characterization of Microlens Arrays	115
	Simonetta Grilli, Lisa Miccio, Francesco Merola, Andrea Finizio, Melania Paturzo, Sara Coppola, Veronica Vespini, and Pietro Ferraro	
5.1	Introduction	115
5.2	Arrays of Liquid Microlenses	116
5.2.1	Interpretation of the Effect	119
5.2.2	Characterization by Quantitative Phase Microscopy	121
5.3	Arrays of Tunable Liquid Microlenses	124
5.3.1	Description of the Two Liquid Microlens Regimes: Separated Lenses Regime (SLR) and Wave-Like Lenses Regime (WLR)	125
5.3.2	Characterization of WLR Tunable Lenses by Quantitative Phase Microscopy	126
5.3.3	Characterization of SLR Tunable Lenses by Quantitative Phase Microscopy	130
5.4	Hemicylindrical Liquid Microlenses	133
5.4.1	Characterization of Hemicylindrical Lenses by Quantitative Phase Microscopy	135
5.5	Arrays of Polymer-Based Microlenses	137
5.5.1	Fabrication of the Samples	138
5.5.2	Characterization of Polymer Microlenses by QPM	140
	References	142
6	Quantitative Phase Imaging in Microscopy Using a Spatial Light Modulator	145
	Vicente Micó, Javier García, Luis Camacho, and Zeev Zalevsky	
6.1	Introduction	145
6.2	Full-Field Quantitative Phase Imaging	146
6.2.1	Holographic Approaches	147
6.2.2	Non-Holographic Approaches	149
6.3	Full-Field Quantitative Phase Imaging in Microscopy by Means of Defocusing Using an SLM	151
6.4	Experimental Validation of the Proposed Approach	158
	References	163

7	Quantitative Phase Microscopy of Biological Cell Dynamics by Wide-Field Digital Interferometry	169
	Natan T. Shaked, Matthew T. Rinehart, and Adam Wax	
7.1	Introduction	170
7.2	Time Resolution – Camera Bandwidth Consumption Tradeoff	171
7.2.1	Slightly Off-Axis Interferometry (SOFFI)	172
7.2.2	Parallel On-Axis Interferometry (PONI)	177
7.2.3	SOFFI Versus PONI	182
7.3	Phase Noise and Stability and Sensitivity of the Interferometric System	183
7.4	Phase Unwrapping Problem	187
7.5	Lack of Specificity inside Cells	188
7.6	From Phase Profiles to Quantitative–Functional Analysis	189
7.7	Conclusion	195
	References	195
8	Spectral Domain Phase Microscopy	199
	Hansford C. Hendargo, Audrey K. Ellerbee, and Joseph A. Izatt	
8.1	Introduction	199
8.1.1	Optical Coherence Tomography (OCT)	200
8.1.2	Spectral Domain Phase Microscopy (SDPM)	204
8.2	Spectral Domain Phase Microscopy Theory and Implementation	205
8.2.1	SDPM Theoretical Analysis	205
8.2.2	SDPM Implementation	209
8.3	Limitations and Artifacts	210
8.3.1	SNR Reduction	210
8.3.2	Lateral Resolution vs Depth of Focus	211
8.3.3	Phase Corruption	212
8.3.4	Phase Wrapping	213
8.4	Applications	217
8.4.1	Three-Dimensional Cellular Phase Microscopy	218
8.4.2	Doppler Velocimetry of Cytoplasmic Streaming	219
8.4.3	Cellular Cytoskeletal Rheology	221
8.4.4	Multi-modal Phase Imaging with Molecular Specificity	222
8.4.5	Action Potential Propagation	223
8.5	Conclusion	225
	References	226
9	Coherent Light Imaging and Scattering for Biological Investigations	229
	Huafeng Ding and Gabriel Popescu	
9.1	Introduction	229

9.2 Quantitative Phase Imaging (QPI) 230

9.2.1 Fourier Phase Microscopy (FPM) 231

9.2.2 Hilbert Phase Microscopy (HPM) 233

9.2.3 Diffraction Phase Microscopy (DPM) 235

9.2.4 Applications of QPI 237

9.3 Fourier Transform Light Scattering (FTLS) 244

9.3.1 Principle of FTLS 244

9.3.2 Applications of FTLS 245

9.4 Summary and Outlook 257

9.4.1 QPI for Blood Screening 258

9.4.2 FTLS of Cancerous Tissues 259

References 259

Part III Image Formation and Super Resolution

10 Coherent Microscopy for 3-D Movement Monitoring and Super-Resolved Imaging 269

Yevgeny Beiderman, Avigail Amsel, Yaniv Tzadka, Dror Fixler, Mina Teicher, Vicente Micó, Javier García, Bahram Javidi, Mehdi DaneshPanah, Inkyu Moon, and Zeev Zalevsky

10.1 Introduction 269

10.2 Speckle-Based Movement Monitoring 272

10.2.1 Experimental Setup 272

10.2.2 Theoretical Modeling 274

10.2.3 Experimental Results 278

10.2.4 Measuring 3-D Map and Flow Distribution 281

10.3 Super-Resolution by Means of Projected Speckle Patterns 285

10.4 Real-Time Non-invasive Identification of Cells and Microorganism Using Digital Holographic Microscopy 287
