

Contents

Preface — VII

Part I: Foundations

Paweł D. Domański, YangQuan Chen, and Maciej Ławryńczuk

1 Outliers in control engineering—they exist, like it or not — 3

Part II: Theory

Stefan Domek

2 On the possibilities of using fractional-order differential calculus in linear and nonlinear model predictive control — 27

Tyrone E. Duncan and Bozenna Pasik-Duncan

3 Stochastic control systems with long-range dependent noise — 47

Yulong Huang, Fengchi Zhu, Yonggang Zhang, Yuxin Zhao, Peng Shi, and Jonathon Chambers

4 Outlier-robust Kalman filtering framework based on statistical similarity measure — 61

Paweł Oświęcimka and Ludovico Minati

5 Multifractal characteristics of singular signals — 99

Part III: Practice

Paweł D. Domański and Maciej Ławryńczuk

6 Study on robustness of nonlinear model predictive control performance assessment — 115

Michał Falkowski

7 Causality analysis incorporating outliers information — 133

Furkan Guc and YangQuan Chen

8 Backlash quantification in control systems using noises with outliers: a benchmark study — 149

X — Contents

Kai Liu, YangQuan Chen, and Paweł D. Domański

- 9 Control performance assessment of the system with fractional-order dynamics — 157**

Kai Liu, YangQuan Chen, and Paweł D. Domański

- 10 A novel method for control performance assessment with fractional-order signal processing — 167**

Michał W. Okoński and Paweł D. Domański

- 11 Study on oscillation detection robustness and outlier filtering impact — 187**

Dariusz Rocki

- 12 3D outliers in BIM supported electrical cable tracing — 219**

Jairo Viola, Carlos Rodriguez, Derek Hollenbeck, and YangQuan Chen

- 13 A radio frequency impedance matching control benchmark and optimal fractional-order stochastic extremum seeking method — 237**

Index — 259
