Contents

1 **Basic Concepts, Quality and Reliability Assurance of Complex Equipment & Systems** . . 1
1.1 Introduction 1
1.2 Basic Concepts 2
1.2.1 Reliability 2
1.2.2 Failure 3
1.2.3 Failure Rate 4
1.2.4 Maintenance, Maintainability 8
1.2.5 Logistic Support 8
1.2.6 Availability 9
1.2.7 Safety, Risk, and Risk Acceptance 9
1.2.8 Quality 11
1.2.9 Cost and System Effectiveness 11
1.2.10 Product Liability 15
1.2.11 Historical Development 16
1.3 Basic Tasks & Rules for Quality & Reliability Assurance of Complex Equip., Systems . 17
1.3.1 Quality and Reliability Assurance Tasks 17
1.3.2 Basic Quality and Reliability Assurance Rules 19
1.3.3 Elements of a Quality Assurance System 21
1.3.4 Motivation and Training 24

2 **Reliability Analysis During the Design Phase** (Nonrepairable Elements up to System Failure) . . 25
2.1 Introduction 25
2.2 Predicted Reliability of Equipment and Systems with Simple Structure 28
2.2.1 Required Function 28
2.2.2 Reliability Block Diagram 28
2.2.3 Operating Conditions at Component Level, Stress Factors 33
2.2.4 Failure Rate of Electronic Components 35
2.2.5 Reliability of One-Item Structures 39
2.2.6 Reliability of Series-Parallel Structures 41
2.2.6.1 Systems without Redundancy 41
2.2.6.2 Concept of Redundancy 42
2.2.6.3 Parallel Models 43
2.2.6.4 Series - Parallel Structures 45
2.2.6.5 Majority Redundancy 49
2.2.7 Part Count Method 51
2.3 Reliability of Systems with Complex Structure 52
2.3.1 Key Item Method 52
2.3.1.1 Bridge Structure 53
2.3.1.2 Rel. Block Diagram in which Elements Appear More than Once . . . 54
2.3.2 Successful Path Method 55
2.3.3 State Space Method 56
2.3.4 Boolean Function Method 57

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.3.5 Parallel Models with Constant Failure Rates and Load Sharing 61
2.3.6 Elements with more than one Failure Mechanism or one Failure Mode 64
2.3.7 Basic Considerations on Fault Tolerant Structures 66
2.4 Reliability Allocation 67
2.5 Mechanical Reliability, Drift Failures 67
2.6 Failure Modes Analysis 72
2.7 Reliability Aspects in Design Reviews 77

3 Qualification Tests for Components and Assemblies 81
3.1 Basic Selection Criteria for Electronic Components 81
3.1.1 Environment 82
3.1.2 Performance Parameters 84
3.1.3 Technology 84
3.1.4 Manufacturing Quality 86
3.1.5 Long-Term Behavior of Performance Parameters 86
3.1.6 *Reliability* 86
3.2 Qualification Tests for Complex Electronic Components 87
3.2.1 Electrical Test of Complex ICs 88
3.2.2 Characterization of Complex ICs 90
3.2.3 Environmental and Special Tests of Complex ICs 92
3.2.4 Reliability Tests 101
3.3 Failure Modes, Mechanisms, and Analysis of Electronic Components 101
3.3.1 Failure Modes of Electronic Components 101
3.3.2 Failure Mechanisms of Electronic Components 102
3.3.3 Failure Analysis of Electronic Components 102
3.3.4 Present VLSI Production-Related Reliability Problems 106
3.4 Qualification Tests for Electronic Assemblies 107

4 Maintainability Analysis 112
4.1 Maintenance, Maintainability 112
4.2 Maintenance Concept 115
4.2.1 Fault Detection (Recognition) and Localization. 116
4.2.2 Equipment and System Partitioning 118
4.2.3 User Documentation 118
4.2.4 Training of Operating and Maintenance Personnel 119
4.2.5 User Logistic Support 119
4.3 Maintainability Aspects in Design Reviews 121
4.4 Predicted Maintainability 121
4.4.1 Calculation of $MTTR_S$ 121
4.4.2 Calculation of $MTTPM_S$ 125
4.5 Basic Models for Spare Parts Provisioning 125
4.5.1 Centralized Logistic Support, Nonrepairable Spare Parts 125
4.5.2 Decentralized Logistic Support, Nonrepairable Spare Parts 129
4.5.3 Repairable Spare Parts 130
4.6 Maintenance Strategies 134
4.6.1 Complete renewal at each maintenance action 134
4.6.2 Block replacement with minimal repair at failure 138
4.6.3 Further considerations on maintenance strategies 139
4.7 Basic Cost Considerations 142

5 Design Guidelines for Reliability, Maintainability, and Software Quality 144
5.1 Design Guidelines for Reliability 144
5.1.1 Derating 144
5.1.2 Cooling 145
5.1.3 Moisture 147
5.1.4 Electromagnetic Compatibility, ESD Protection 148
5.1.5 Components and Assemblies 150
5.1.5.1 Component Selection 150
5.1.5.2 Component Use 150
5.1.5.3 PCB and Assembly Design 151
5.1.5.4 PCB and Assembly Manufacturing 152
5.1.5.5 Storage and Transportation 153
5.1.6 Particular Guidelines for IC Design and Manufacturing 153
5.2 Design Guidelines for Maintainability 154
5.2.1 General Guidelines 154
5.2.2 Testability 154
5.2.3 Accessibility, Exchangeability 156
5.2.4 Operation, Adjustment 157
5.3 Design Guidelines for Software Quality 157
5.3.1 Guidelines for Software Defect Prevention 160
5.3.2 Configuration Management 163
5.3.3 Guidelines for Software Testing 164
5.3.4 Software Quality Growth Models 164

6 Reliability and Availability of Repairable Systems 167
6.1 Introduction and General Assumptions, Conclusions 167
6.2 One-Item Structure 173
6.2.1 One-Item Structure New at Time $t = 0$ 174
6.2.1.1 Reliability Function 174
6.2.1.2 Point Availability 175
6.2.1.3 Average Availability 176
6.2.1.4 Interval Reliability 177
6.2.1.5 Special Kinds of Availability 178
6.2.2 One-Item Structure New at Time $t = 0$ and with Constant Failure Rate λ . . . 181
6.2.3 One-Item Structure with Arbitrary Conditions at $t = 0$ 182
6.2.4 Asymptotic Behavior 183
6.2.5 Steady-State Behavior 185
6.3 Systems without Redundancy 187
6.3.1 Series Structure with Constant Failure and Repair Rates 187
6.3.2 Series Structure with Constant Failure and Arbitrary Repair Rates 190
6.3.3 Series Structure with Arbitrary Failure and Repair Rates 191
6.4 1-out-of-2 Redundancy 194
6.4.1 1-out-of-2 Redundancy with Constant Failure and Repair Rates 194
6.4.2 1-out-of-2 Redundancy with Constant Failure and Arbitrary Repair Rates . . . 202
6.4.3 1-out-of-2 Red. with Const. Failure Rate in Res. State & Arbitr. Repair Rates. . 205
6.5 *k*-out-of-*n* Redundancy 211
6.5.1 *k*-out-of-*n* Warm Redundancy with Constant Failure and Repair Rates 212
6.5.2 *k*-out-of-*n* Active Redundancy with Const. Failure & Arbitrary Repair Rates . . 216
6.6 Simple Series - Parallel Structures 218

6.7 Approximate Expressions for Large Series - Parallel Structures 224
6.7.1 Introduction 224
6.7.2 Application to a Practical Example 228
6.8 Systems with Complex Structure 236
6.8.1 General Considerations 236
6.8.2 Preventive Maintenance 238
6.8.3 Imperfect Switching. 241
6.8.4 Incomplete Coverage 246
6.8.5 Elements with more than two States or one Failure Mode 253
6.8.6 Fault Tolerant Reconfigurable Systems 255
6.8.6.1 Ideal Case 255
6.8.6.2 Time Censored Reconfiguration (Phased-Mission Systems) 255
6.8.6.3 Failure Censored Reconfiguration 262
6.8.6.4 Reward and Frequency / Duration Aspects 266
6.8.7 Systems with Common Cause Failures 267
6.8.8 Basic Considerations on Network-Reliability 271
6.8.9 General Procedure for Modeling Complex Systems 273
6.9 Alternative Investigation Methods 276
6.9.1 Systems with Totally Independent Elements 276
6.9.2 Static and Dynamic Fault Trees 276
6.9.3 Binary Decision Diagrams 279
6.9.4 Event Trees 282
6.9.5 Petri Nets 283
6.9.6 Numerical Reliability and Availability Computation 284
6.9.6.1 Numerical Computation of System's Reliability and Availability . . . 284
6.9.6.2 Monte Carlo Simulations 286
6.9.7 Approximate expressions for Large, Complex Systems: Basic Considerations. . 289

7 Statistical Quality Control and Reliability Tests 291
7.1 Statistical Quality Control 291
7.1.1 Estimation of a Defective Probability p 292
7.1.2 Simple Two-sided Sampling Plans for Demonstration of a Def. Probability p . . 294
7.1.2.1 Simple Two-sided Sampling Plans 295
7.1.2.2 Sequential Tests 297
7.1.3 One-sided Sampling Plans for the Demonstration of a Def. Probability p . . . 298
7.2 Statistical Reliability Tests 301
7.2.1 Reliability & Availability Estimation & Demon. for a given Mission 301
7.2.2 Availability Estimation & Demonstration for Continuous Operation 303
7.2.2.1 Availability Estimation 303
7.2.2.2 Availability Demonstration 305
7.2.2.3 Further Availability Evaluation Methods for Continuous Operation . . 306
7.2.3 Estimation and Demonstration of a Const. Failure Rate λ (or of $MTBF=1/\lambda$). . 308
7.2.3.1 Estimation of a Constant Failure Rate λ 310
7.2.3.2 Simple Two-sided Test for the Demonstration of λ 312
7.2.3.3 Simple One-sided Test for the Demonstration of λ 316
7.3 Statistical Maintainability Tests 317
7.3.1 Estimation of an *MTTR* 317
7.3.2 Demonstration of an *MTTR* 319
7.4 Accelerated Testing 321
7.5 Goodness-of-fit Tests 326

7.5.1 Kolmogorov-Smirnov Test . . . 326
7.5.2 Chi-square Test . . . 330
7.6 Statistical Analysis of General Reliability Data . . . 333
7.6.1 General considerations . . . 333
7.6.2 Tests for Nonhomogeneous Poisson Processes . . . 335
7.6.3 Trend Tests . . . 337
7.6.3.1 Tests of a HPP versus a NHPP with increasing intensity . . . 337
7.6.3.2 Tests of a HPP versus a NHPP with decreasing intensity . . . 340
7.6.3.3 Heuristic Tests to distinguish between HPP and Monotonic Trend . . . 341
7.7 Reliability Growth . . . 343

8 Quality & Reliability Assurance During the Production Phase (Basic Considerations) . . . 349
8.1 Basic Activities . . . 349
8.2 Testing and Screening of Electronic Components . . . 350
8.2.1 Testing of Electronic Components . . . 350
8.2.2 Screening of Electronic Components . . . 351
8.3 Testing and Screening of Electronic Assemblies . . . 354
8.4 Test and Screening Strategies, Economic Aspects . . . 356
8.4.1 Basic Considerations . . . 356
8.4.2 Quality Cost Optimization at Incoming Inspection Level . . . 359
8.4.3 Procedure to handle first deliveries . . . 364

Annexes

A1 Terms and Definitions . . . 365

A2 Quality and Reliability Standards . . . 379
A2.1 Introduction . . . 379
A2.2 General Requirements in the Industrial Field . . . 380
A2.3 Requirements in the Aerospace, Railway, Defense, and Nuclear Fields . . . 382

A3 Definition and Realization of Quality and Reliability Requirements . . . 383
A3.1 Definition of Quality and Reliability Requirements . . . 383
A3.2 Realization of Quality & Reliability Requirements for Complex Equip. & Systems . . . 385
A3.3 Elements of a Quality and Reliability Assurance Program . . . 390
A3.3.1 Project Organization, Planning, and Scheduling . . . 390
A3.3.2 Quality and Reliability Requirements . . . 391
A3.3.3 Reliability, Maintainability, and Safety Analysis . . . 391
A3.3.4 Selection and Qualification of Components, Materials, Manuf. Processes . . . 392
A3.3.5 Configuration Management . . . 392
A3.3.6 Quality Tests . . . 394
A3.3.7 Quality Data Reporting System . . . 394

A4 Checklists for Design Reviews . . . 397
A4.1 System Design Review . . . 397
A4.2 Preliminary Design Reviews . . . 398
A4.3 Critical Design Review (System Level) . . . 400

A5 Requirements for Quality Data Reporting Systems . . . 402

A6 Basic Probability Theory . . . 405
A6.1 Field of Events . . . 405
A6.2 Concept of Probability . . . 407

A6.3 Conditional Probability, Independence 410
A6.4 Fundamental Rules of Probability Theory 411
A6.4.1 Addition Theorem for Mutually Exclusive Events 411
A6.4.2 Multiplication Theorem for Two Independent Events 412
A6.4.3 Multiplication Theorem for Arbitrary Events 413
A6.4.4 Addition Theorem for Arbitrary Events 413
A6.4.5 Theorem of Total Probability 414
A6.5 Random Variables, Distribution Functions 415
A6.6 Numerical Parameters of Random Variables 421
A6.6.1 Expected Value (Mean) 421
A6.6.2 Variance 424
A6.6.3 Modal Value, Quantile, Median 426
A6.7 Multidimensional Random Variables, Conditional Distributions 426
A6.8 Numerical Parameters of Random Vectors 428
A6.8.1 Covariance Matrix, Correlation Coefficient 429
A6.8.2 Further Properties of Expected Value and Variance 430
A6.9 Distribution of the Sum of Indep. Positive Random Variables and of τ_{min}, τ_{max} . 430
A6.10 Distribution Functions used in Reliability Analysis 433
A6.10.1 Exponential Distribution 433
A6.10.2 Weibull Distribution 434
A6.10.3 Gamma Distribution, Erlangian Distribution, and χ^2-Distribution . . 436
A6.10.4 Normal Distribution 438
A6.10.5 Lognormal Distribution 439
A6.10.6 Uniform Distribution 441
A6.10.7 Binomial Distribution 441
A6.10.8 Poisson Distribution 443
A6.10.9 Geometric Distribution 445
A6.10.10 Hypergeometric Distribution 446
A6.11 Limit Theorems 446
A6.11.1 Law of Large Numbers 447
A6.11.2 Central Limit Theorem 448

A7 Basic Stochastic-Processes Theory 452
A7.1 Introduction 452
A7.2 Renewal Processes 455
A7.2.1 Renewal Function, Renewal Density 457
A7.2.2 Recurrence Times 460
A7.2.3 Asymptotic Behavior 461
A7.2.4 Stationary Renewal Processes 463
A7.2.5 Homogeneous Poisson Processes 464
A7.3 Alternating Renewal Processes 466
A7.4 Regenerative Processes 470
A7.5 Markov Processes with a finite number of States 472
A7.5.1 Markov Chains with a finite number of States. 472
A7.5.2 Markov Processes with a finite number of States. 474
A7.5.3 State Probabilities and Stay Times in a Given Class of States. 483
A7.5.3.1 Method of Differential Equations 483
A7.5.3.2 Method of Integral Equations 487
A7.5.3.3 Stationary State and Asymptotic Behavior 488
A7.5.4 Frequency / Duration and Reward Aspects 490
A7.5.4.1 Frequency / Duration 490
A7.5.4.2 Reward 492

A7.5.5 Birth and Death Process 493
A7.6 Semi-Markov Processes with a finite number of States 497
A7.7 Semi-regenerative Processes 502
A7.8 Nonregenerative Stochastic Processes 507
A7.8.1 General Considerations 507
A7.8.2 Nonhomogeneous Poisson Processes (NHPP) 508
A7.8.3 Superimposed Renewal Processes 512
A7.8.4 Cumulative Processes 513
A7.8.5 General Point Processes 515

A8 Basic Mathematical Statistics 517
A8.1 Empirical Methods 517
A8.1.1 Empirical Distribution Function 518
A8.1.2 Empirical Moments and Quantiles 520
A8.1.3 Further Applications of the Empirical Distribution Function 521
A8.2 Parameter Estimation 525
A8.2.1 Point Estimation 525
A8.2.2 Interval Estimation 530
A8.2.2.1 Estimation of an Unknown Probability p 530
A8.2.2.2 Estimation of Param. λ for Exp. Distrib.: Fixed T, with repl. . . 534
A8.2.2.3 Estimation of Param. λ for Exp. Distrib.: Fixed n, no repl. . . . 535
A8.2.2.4 Availability Estimation (Erlangian Failure-Free & Repair Times) . . 537
A8.3 Testing Statistical Hypotheses 539
A8.3.1 Testing an Unknown Probability p 540
A8.3.1.1 Simple Two-sided Sampling Plan 541
A8.3.1.2 Sequential Test 542
A8.3.1.3 Simple One-sided Sampling Plan 543
A8.3.1.4 Availability Demonstration (Erlangian Failure-Free & Rep. Times) . 545
A8.3.2 Goodness-of-fit Tests for Completely Specified $F_0(t)$ 547
A8.3.3 Goodness-of-fit Tests for $F_0(t)$ with Unknown Parameters 550

A9 Tables and Charts 553
A9.1 Standard Normal Distribution 553
A9.2 χ^2-Distribution (Chi-Square Distribution) 554
A9.3 t-Distribution (Student distribution) 555
A9.4 F-Distribution (Fisher distribution) 556
A9.5 Table for the Kolmogorov-Smirnov Test 557
A9.6 Gamma Function 558
A9.7 Laplace Transform 559
A9.8 Probability Charts (Probability Plot Papers) 561
A9.8.1 Lognormal Probability Chart 561
A9.8.2 Weibull Probability Chart 562
A9.8.3 Normal Probability Chart 563

A10 Basic Technological Component's Properties 564

A11 Problems for Home-Work 568

Acronyms 574
