The Pineal Organ

With 190 Figures

Springer-Verlag Berlin Heidelberg New York 1981

Contents

A. General Introduction	1
B. The Mammalian Epiphysis Cerebri	5
I. Basic Biochemistry, Pharmacology and Physiology	5
II. Gross Anatomy	12
1. General Aspects	12
2. Form, Size and Location	13
a) Man	19
b) Other Primates	21
c) Cetacea	22
d) Artiodactyla	22
e) Hyracoidea	22
f) Proboscidea	23
g) Perissodactyla	24
h) Lagomorpha	24
i) Carnivora	25
j) Rodentia	25
k) Pholidota	30
l) Xenarthra	33
m) Chiroptera	33
n) Tupaioidea	34
o) Insectivora	34
p) Marsupialia	34
q) Monotremata	35
3. Weight and Volume	35
a) Weight	35
b) Volume	41
4. Epiphysectomy	43
III. Development	44
1. Man	44
2. Rat	51
3. Mouse	61
4. Hamster	61
5. Rabbit	62
6. Cow and Sheep	64
IV. General Histology	65
1. Survey of the Basic Structural Components	65

2. General Histological Pattern	66
a) Man	66
b) Other Mammals	67
3. Regional Differences	67
V. The Pinealocyte	71
1. Light Microscopy	71
a) Shape	71
b) Staining Properties	71
c) Application of Special Optical Methods	72
d) Nucleus and Nucleolus	73
e) Mitotic Activity	75
f) Circadian Changes	75
g) Pigments	76
2. Histochemistry	76
a) Inorganic Constituents	76
b) Carbohydrates	77
α) Glycogen	77
β) Sialic Acid	79
γ) Ascorbic Acid	79
δ) Mucopolysaccharides	79
c) Lipids	79
d) Amino Acids	84
e) Biogenic Amines	85
α) Serotonin	85
β) Melatonin	90
γ) Dopamine	90
δ) Histamine	90
f) Peptides	91
g) Proteins and Glycoproteins	91
h) Nucleic Acids	92
α) Deoxyribonucleic Acid (DNA)	92
β) Ribonucleic Acid (RNA)	93
i) Enzymes	94
α) Oxidoreductases	94
β) Transferases	105
γ) Hydrolases	105
δ) Lyases	109
ϵ) Conclusion	109
3. Ultrastructure	110
a) General Aspects	110
b) Pinealocyte Shape	111
c) Perikaryon	113
α) Nucleus	113
β) Nucleolus	116
γ) Cytoplasm	118
d) Cell Processes	161

α) Preterminal Parts	161
β) Bulbous Endings	162
e) Morphological Correlates of Secretory Products	165
f) Different Types of Pinealocytes?	167
g) Intercellular Relationships	173
4. Electrophysiological Properties	174
VI. Glial Cells	177
1. Oligodendrocytes	177
2. Astrocytes and Interstitial Cells	177
3. Ependymal Cells	181
VII. Innervation	186
1. Sympathetic Innervation	186
a) Establishment of the Sympathetic Nature of the Sympathetic Nerve Fibres in the Epiphysis Cerebri	187
b) Location of Sympathetic Nerve Fibres	192
c) Enzyme Histochemistry	193
d) Ultrastructure	193
α) Vesicle Content	193
β) Other Constituents	201
γ) Developing Nerve Fibres	201
e) Ultrastructural Relationships Between Sympathetic Nerve Fibres and Pinealocytes	203
f) The Pinealocyte Deprived of Its Sympathetic Input	204
g) Central Pathways Linking the Sympathetic Nerve Fibres with the Optic System	206
2. Commissural Fibres	207
3. Parasympathetic Innervation	210
4. Neurosecretory Fibres	212
5. The So-called Fetal Pineal Nerve	213
6. Intra-epiphyseal Ganglion Cells	213
7. Extra-epiphyseal Ganglion Cells	214
VIII. Blood Supply	216
1. General Aspects	216
2. Arterial Supply and Venous Drainage	216
3. Development	218
4. Histochemistry of Blood Vessels	218
5. Ultrastructure of Capillaries	219
6. Perivascular Spaces	220
7. Pineal Blood-Brain Barrier	223
IX. Other Constituents	223
1. Connective Tissue	223
2. Mast Cells	224
3. Concretions (Corpora Arenacea)	225
4. Cysts	230
5. Melanophores	230
6. Striated Muscle	231

X. The Transplanted and Cultured Epiphysis Cerebri	234
1. Transplantation	234
2. Tissue Culture	235
XI. Functional Aspects	237
1. Melatonin Formation	237
2. Formation of Indoleamines Other than Melatonin and Related Substances	239
3. Presence of Peptides, Polypeptides and Proteins with Possible Hormonal Properties	240
a) Vasotocin	240
b) Hypothalamic Releasing Hormones	241
c) Structurally Unidentified Presumptive Polypeptides and Proteins	242
4. Exogenous Factors Influencing Pineal Function	242
a) Photic Influences	242
α) Pineal Morphology and Function Under Constant Illu- mination	242
β) Pineal Morphology and Function Under Constant Dark- ness	244
γ) Effects of Short-term Photic Changes on Pineal Morphol- ogy and Function	246
δ) Light Spectra and Intensities Most Effective in Influenc- ing Pineal Function	247
b) Ambient Temperature	247
c) Noise and Vibration	248
d) Olfactory Stimuli	248
e) Nutritional Factors	249
f) Isolation, Crowding, Captivity, Immobilization and Other Stressful Stimuli	249
g) Irradiation	250
h) Drug Action	250
5. Rhythms of Pineal Function	251
a) Daily Rhythms	251
b) Weekly Rhythm	256
c) Annual Rhythms	256
d) Other Rhythms	257
6. Onset of Pineal Function During Ontogenesis	257
a) Rat	257
b) Sheep	260
7. Pineal Morphology and Function During Puberty and in Old Age	260
a) Puberty	260
b) Old Age	261
8. Target Organs of Pineal Substances: General Aspects	262
a) Release, Distribution and Fate of Pineal Substances	262

b) Effects of Pineal Substances on Pineal Morphology and Function	264
c) Effects of the Pineal Not Related to Any Particular Organ	265
9. Pineal-Brain Interactions	266
a) Pathways	266
b) Hypothalamus	268
c) Extrahypothalamic Actions	270
α) Effects of Melatonin Administration in Humans	270
β) Sedation and Sleep	271
γ) Locomotor Rhythms	272
δ) Somatic Brain Effects	272
ϵ) Behavioural Studies	273
d) Neurological and Mental Diseases	274
10. Pineal-Pituitary Interactions	274
a) Effects of Hypophysectomy on the Pineal	274
b) Effects of Pinealectomy and Pineal Substances on Non-hormonal Parameters of the Pituitary	275
α) Pinealectomy	275
β) Pineal Substances	276
c) Growth Hormone and Body Weight	277
d) Prolactin and Milk Yield	278
e) Adrenocorticotrophic Hormone (ACTH)	279
f) Thyroid-Stimulating Hormone (TSH)	279
g) Follicle-Stimulating Hormone (FSH)	279
h) Luteinizing Hormone (LH)	280
i) Melanocyte-Stimulating Hormone (MSH)	282
11. Pineal and Reproductive Organs	282
a) General Considerations	282
b) The Pineal as a Target Organ of Sex Hormones	284
α) Effects of Gonadectomy on the Pineal	285
β) Effects of Gonadotrophins on the Pineal	286
γ) Effects of Oestrogens and Progesterone on the Pineal	286
δ) Effects of Androgens and Anti-androgens on the Pineal	287
c) Effects of Pinealectomy and Pineal Sympathectomy on Reproductive Organs	288
α) Prepuberal Animals	288
β) Adult Animals	289
d) Effects of Pineal Substances on Reproductive Organs	292
α) Females	292
β) Males	295
e) Pineal Function and the Oestrous Cycle	296
f) Pineal Function in Seasonal Breeders	299
g) Pineal Function During Pregnancy	301
h) Maternal and Sexual Behaviours	304
12. Pineal-Adrenal Interrelationships	304
a) Adrenal Cortex	305
b) Adrenal Medulla	308

13. Pineal-Thyroid Interrelationships	308
14. Pineal-Parathyroid Interrelationships	310
15. Pineal, Islets of Langerhans and Carbohydrate Metabolism	311
16. Miscellaneous Effects of the Epiphysis Cerebri	312
a) Adipose Tissue, Lipid Metabolism and Liver	312
b) Food Intake, Water Intake, Alcohol Consumption and Electrolyte Metabolism	313
c) Urinary System	314
d) Blood Pressure and Haematocrit	315
e) Retina and Harderian Gland	315
f) Body Temperature	316
g) Hair Growth, Hair Colour, Skin and Wound Healing	316
h) Intestine	316
i) Immune System	317
j) Mast Cells	317
k) Cancer and Other Diseases	317
XII. Tumours of Pineal Tissue	318
C. The Non-Mammalian Epiphysis Cerebri: Introductory Remarks	321
D. The Pineal Complex in Lampreys and Fishes	322
I. General Aspects	322
II. Gross Anatomy of the Pineal Organ	322
III. Development of the Pineal Complex	325
IV. Light Microscopy of the Pineal Organ	327
V. Histochemistry of the Pineal Organ	330
VI. Ultrastructure of the Pineal Organ	333
1. Photoreceptor Cells	333
a) Outer Segments	335
b) Presence of Secretory Granules	339
c) Synaptic Connections	342
d) Miscellaneous Findings in Photoreceptors	345
2. Supporting Cells	345
VII. Innervation of the Pineal Organ	346
1. Afferent Innervation	347
2. Efferent Fibres	352
VIII. Blood Supply of the Pineal Organ	353
IX. The Function of the Pineal Organ	353
1. Photoreception	354
a) Electrophysiology	354
b) Morphological Findings	355
c) The So-called Pineal Window	356
2. Melatonin Secretion	357

3. Functional Significance of the Pineal Organ	359
a) Regulation of Colour Change	359
b) Phototaxis	361
c) Locomotor Activity	362
d) Gonadal Function	362
e) Pituitary Function	364
f) Thyroid Function	364
g) Inter-renal Function	364
h) Miscellaneous Effects	365
X. Structure and Function of the Parapineal Organ	365
E. The Pineal Complex in Amphibians	368
I. Gross Anatomy and General Histology	368
1. The Pineal Organ Proper	368
2. Frontal Organ	370
II. Development	371
III. Ultrastructure and Histochemistry	372
1. Photoreceptor Cells	373
2. Supporting Cells	379
3. Intrapineal Nerve Cells	383
4. Axons Running Through the Lumen of the Pineal Organ	385
IV. Nervous Connections of the Pineal Complex	389
1. The Frontal Nerve	389
2. The Pineal Tract	391
3. The Pineal Complex After Severing Its Nervous Connections	392
V. Blood Supply	392
VI. Functional Aspects	393
1. Light Perception	393
2. Secretion	394
3. Target Organs of the Pineal Complex	395
F. The Pineal Complex in Reptiles	399
I. Gross Anatomy	399
II. Development	399
III. Structure, Differentiation and Function of the Pineal Organ Proper	405
1. General Histological Pattern	405
2. Histogenesis	408
3. Ultrastructural Differentiation	408
4. Development of Indoleamine Metabolism	409
5. Histochemistry of the Adult Pineal Organ	411
6. Ultrastructure of the Intrinsic Cells of the Adult Pineal Organ	413
a) Typical Photoreceptor Cells	414

b) Secretory Rudimentary Photoreceptors	416
c) Pinealocytes	424
d) Supporting Cells	425
7. The Nervous Apparatus	425
a) Afferent Fibres	425
b) Efferent (Sympathetic) Innervation	426
8. The Blood Supply	427
9. Functional Aspects	427
IV. The Parietal or Third Eye	429
1. Gross Anatomy	430
2. Organogenesis	430
3. Ultrastructure and Histochemistry	431
a) Retina	431
b) Lens	432
c) Luminal Humour	433
d) Capsule	433
e) Cornea	433
4. Nervous Connections	433
5. The Function of the Parietal Eye	434
G. The Avian Pineal Organ	437
I. Gross Anatomy	437
1. Primary Pineal Organ	437
2. Secondary or Accessory Pineal Tissue	440
3. Pinealectomy.	440
II. Development	440
1. Organogenesis	440
2. Histogenesis	441
3. Ultrastructural Differentiation of Intrinsic Cells	443
III. Light Microscopy	444
IV. Histochemistry	445
V. Ultrastructure of Intrinsic Cells	447
1. Pinealocytes of the "Receptor" Type	449
2. Secretory Pinealocytes of the Receptor Type Lacking Membraneous Whorls	452
3. Pinealocytes Lacking Associations with a Lumen	456
4. Supporting Cells	457
5. Intrinsic Cells In Vitro	458
VI. The Nervous Apparatus	458
1. Afferent Nervous Connections	458
2. Efferent Autonomic Innervation	461
3. Neurosecretory Neurons?	462
VII. Vascularization	462

VIII. Functional Aspects	462
1. Direct Photoreception?	462
2. Secretion	463
a) Basic Biochemistry of Pineal Indoleamines	464
b) Melatonin-Forming Capacity of the Avian Pineal Organ Compared to that in Other Vertebrates	464
c) Extrapineal Sites of Melatonin Formation	464
d) Mode of Secretion of Pineal Melatonin	465
e) Circadian Changes of Indoleamines	465
f) Seasonal Changes	466
g) Sex Differences	466
h) Onset of Secretion During Ontogenesis	466
3. Factors Influencing Pineal Structure and Function	466
a) The Effects of Light and Darkness	466
b) Other External Factors	467
4. Nervous Pathways and Chemical Substances Regulating Pineal Function in Birds as Compared with Mammals	468
5. The Effects of Pineal Substances on Avian Pineal Structure and Function	470
6. Possible Target Organs of Pineal Substances	470
a) Brain	470
α) Regulation of Circadian Locomotor Rhythms	470
β) Other Brain Functions	471
b) Pituitary	472
c) Gonads	473
d) Thyroid	474
e) Adrenals	475
f) Miscellaneous Observations	475
H. Epilogue	476
References	479
Appendix to References: Review Articles Not Mentioned in the Text	588
