Preface *ix*

Biography *xii*

1	The Basic Ideas	1
1.1	Introduction	1
2	Design of Experiments – DOE	3
2.1	The 2^2 Factorial Designs	4
2.2	Effects for 2^2 Factorial Designs	6
2.3	Interactions Between Factors	6
2.4	Standard Error for the Effects	7
2.5	2^3 Factorial Design	7
2.6	Effects for the 2^3 Factorial Designs	9
2.7	Standard Errors of Effects for Two- and Three-Level Factorial Designs	10
3	Neural Network Modeling – Data Mining	17
3.1	Data Preprocessing	18
3.2	Building, Training, and Verifying Model	19
3.3	Model Analyzing	21
3.4	What-Ifs Optimization	25
3.5	DOE Experiment Using Neural Networks Model	26
4	Evolutionary Operation – EVOP	29
4.1	Small-Scale and Plant-Scale Investigation	29
4.2	Scale-up	29
4.3	Static and Evolutionary Operation	30
4.4	Analysis of Information Board	34
4.5	Three-Factor Scheme	35
4.6	Current Best-Known Conditions	36
4.7	Change in Mean for a 2^2 Factorial Design with Center Point	38
4.8	Standard Errors for the Effects	38

4.9	The Effects and Their Standard Errors for a 2^2 Design with Center Point	40
4.10	Analysis of Information Board for Three Responses Using Factorial Effects	40
4.11	2^3 Factorial Design Effects, Interpretation, and Information Board	41
4.11.1	An Estimate of Standard Deviation	43
4.12	Dividing the 2^3 Factorial Design Into Two Blocks	45
4.13	2^3 Design with Two Center Points Run in Two Blocks	45
4.13.1	Two Standard Error Limits for the Overall Change in Mean	46
5	Different Techniques of EVOP	49
5.1	Box EVOP – BEVOP	49
5.2	Calculation Procedure for Two-Factor EVOP	50
5.3	Calculation Procedure for Three-Factor EVOP	54
5.4	BEVOP in Plant-Scale Experiments	93
5.5	BEVOP Applications	96
5.6	BEVOP Advantages and Disadvantages	99
5.7	BEVOP Simulation	100
5.7.1	2^2 BEVOP Simulation	100
5.7.1.1	Simulation No. 1	100
5.7.1.2	Simulation No. 2: 2^2 BEVOP	117
5.7.1.3	Simulation No. 3: 2^2 BEVOP	127
5.7.2	2^3 BEVOP Simulation	134
5.7.2.1	Simulation No. 4	134
5.8	Rotating Square Evolutionary Operation – ROVOP	155
5.8.1	2^2 ROVOP	155
5.8.2	Method of Analysis	157
5.8.3	2^2 ROVOP Simulation	158
5.8.3.1	Simulation No. 5	158
5.8.4	2^3 ROVOP Simulation	185
5.8.4.1	Simulation No. 6: 2^3 ROVOP	186
5.9	Random Evolutionary Operation – REVOP	198
5.9.1	REVOP Simulation	200
5.9.1.1	Simulation No. 7	200
5.10	Quick-Start EVOP – QSEVOP	204
5.10.1	The way QSEVOP works	204
5.10.2	How to Recover From “Hang-ups”	207
5.11	QSEVOP Simulation	208
5.11.1	Simulation No. 8	208
5.12	Simplex Evolutionary Operation – SEVOP	214
5.12.1	The Basic Simplex Method	214
5.12.2	Simplex Evolutionary Operation – SEVOP	223
5.12.3	SEVOP Simulation	228
5.12.3.1	Simulation S-9	228

5.12.3.2 Simulation S-10 231

5.13 Some Practical Advice About Using EVOP 233

6 EVOP Software 235

**Appendix A The Approximate Method of Estimating the Standard Deviation
in EVOP 237**

Appendix B 2^2 - and 2^3 -Factor Box EVOP Calculations with Center Point 239

Appendix C Short Table of Random Normal Deviates 243

**Appendix D How Many Cycles Are Necessary to Detect Effects of Reasonable
Size 245**

Appendix E Multiple Responses: The Desirability Approach 247
