

Content

Vorwort	III
Zusammenfassung	V
Abstract	VII
Nomenclature	IX
Abbreviations and Definitions	IX
Formula Symbols and Units	XI
1 Introduction	1
2 Clinical Background	5
2.1 Blood properties	5
2.2 Physiology of Gas Exchange and Transport	9
2.3 Respiratory Insufficiency	11
2.4 Extracorporeal Membrane Oxygenation	12
3 Membrane Technology in Artificial Lungs	15
3.1 Evolution of Membrane Design for Blood Oxygenation	15
3.2 Current Membrane Lungs	19
3.3 Challenges with Current Membrane Technology	20
4 Novel Membrane Geometries: TPMS-based Membranes	25
4.1 Minimal Surfaces	25
4.2 Triply-Periodic Minimal Surfaces	27
4.3 TPMS in Nature	28
4.4 Construction of TPMS	29
4.5 Technical Applications and Current Research on TPMS	30
4.6 Promises of TPMS-shaped Membranes in Artificial Lungs	36
5 Structure-Dependent Gas Transfer Performance	37
5.1 Introduction	37
5.2 Materials and methods	39
5.3 Results & Discussion	46
5.4 Conclusion	53
6 Flow-induced hemolysis and hydraulic properties	55
6.1 Introduction	55

6.2 Materials and Methods57

6.3 Results.....65

6.4 Discussion.....67

6.5 Outlook.....72

6.6 Conclusion73

7 Optimal Flow Distribution by Locally-Modified Permeabilities.....75

7.1 Introduction.....75

7.2 Materials and methods77

7.3 Results.....88

7.4 Discussion.....92

7.5 Conclusion96

8 Design Optimization of TPMS elements97

8.1 Introduction.....97

8.2 Materials and Methods98

8.2.3 Boundary conditions101

8.3 Results and Discussion106

8.4 Conclusion115

9 Summary and Outlook.....117

9.1 Summary117

9.2 Outlook.....119

10 References.....127

11 Appendix.....145

11.1 Experimental data to gas transfer performance145

11.2 Experimental data to blood damage.....151

11.3 Experimental data on hydraulic performance154

11.4 Numerical Data from simulated design variations156

12 Figures and Tables161

12.1 Figures.....161

12.2 Tables.....168
