

# Contents

Preface to the English Edition	vii
Prefaces to the German Editions	ix
Chapter 1. Cubic Equations	1
Chapter 2. Casus Irreducibilis: The Birth of the Complex Numbers	27
Chapter 3. Biquadratic Equations	41
Chapter 4. Equations of Degree $n$ and Their Properties	47
The Fundamental Theorem of Algebra: Plausibility and Proof	53
Chapter 5. The Search for Additional Solution Formulas	57
Permutations	62
The Fundamental Theorem on Symmetric Polynomials	67
Ruffini and the General Equation of Fifth Degree	71
Chapter 6. Equations That Can Be Reduced in Degree	77
The Decomposition of Integer Polynomials	79
Eisenstein's Irreducibility Criterion	82
Chapter 7. The Construction of Regular Polygons	85
Constructions with Straightedge and Compass	91
The Classical Construction Problems	97

---

Chapter 8. The Solution of Equations of the Fifth Degree	105
The Transformations of Tschirnhaus and of Bring and Jerrard	112
Chapter 9. The Galois Group of an Equation	117
Computing the Galois Group	137
A Quick Course in Calculating with Polynomials	142
Chapter 10. Algebraic Structures and Galois Theory	147
Groups and Fields	152
The Fundamental Theorem of Galois Theory: An Example	164
The Unsolvability of the Classical Construction Problems	180
Chapter 11. Galois Theory According to Artin	183
Epilogue	199
Index	211
