PART 1 INTRODUCTION TO CNC TECHNOLOGY

1 Historical Development of Numerical Control Production.	3
Germany after World War II.	3
Rebuilding the German Machine Tool Industry	4
Machine Tool Industry in Eastern Germany.	4
Worldwide Changes	6
Advancement of the German Machine Tool Industry	7
The Japanese Influence	7
The Crisis in Germany	7
Causes and Effects	8
Flexible Manufacturing Systems	9
World Economic Crisis of 2009.	10
Situation and Outlook	11
Conclusion	12
2 Milestones in the Development of Numerical Control	15
3 What Is NC and CNC?	19
The Path to NC	19
Hardware	20
Software.	22
Control Methods	22
NC Axes	25
Programmable Logic Controllers	26
Interface Section.	27
Computers and NC	27
NC Programs.	29
Programming	30
Data Input	33
Operation	34
Summary	35
Important Points to Remember	37

PART 2 FUNCTIONS OF CNC MACHINE TOOLS

4 Positional Data Input.	41
Introduction	41
Axis Designations	41
Closed-Loop Position Control	44
Position Measurement	47
Simple Diagnosis of Measurement Devices.	59

Compensations	61
Important Points to Remember	73
5 Switching Functions	75
Explanations	75
Tool Change	76
Tool Changing at Milling Machines and Machining Centers	76
Tool Changing on the Lathe	79
Tool Location Coding	80
Workpiece Change	81
Spindle Speed Change	84
Feed Rate	85
Summary	85
Important Points to Remember	87
6 Operating Functions of Numerical Control Systems	89
Definition	89
Basic Functions of CNC	89
Special Functions of CNC Systems	94
Dynamic Collision Monitoring	97
Integrated Safety Concepts for CNC Machines	104
Condition Monitoring and Machine Data Collection	120
Displays in CNC Systems	126
Touch Operation of the CNC System	126
Open Controls	132
Price Consideration	134
Advantages of Newest CNC Developments	136
Summary	137
Important Points to Remember	138
7 Programmable-Logic Controllers (PLCs)	139
Definition	139
Origins of PLC	139
Structure and Functions of PLCs	140
Data Buses and Field Buses	143
Advantages of PLCs	148
PLC Programming and Documentation	150
Program	152
Program Memory	152
PLCs, CNC Systems, and PCs in Integrated Operation	153
Selection Criteria for PLCs	154
Summary	156
Comparison Tables CNC/PLC	156
Important Points to Remember	160
8 Effects of CNC on Machine Components	161
Machine Configuration	161
Machine Frames	163

Guides	164
Machine Enclosures	164
Coolant Supply	165
Chip Removal	166
Summary	166
Important Points to Remember	167

PART 3 ELECTRICAL DRIVES OF CNC MACHINE TOOLS

9 Drive Control for CNC Machine Tools.	171
Definition	171
Mechanical Axis	172
Analog Control	173
Analog versus Digital Position Control	174
Digital Intelligent Drive Technology	174
Controller Types and Controlling Behavior	176
Loop Gain and K_v Factor	177
Precontrol.	179
Frequency Converter	179
Summary	184
Important Points to Remember	186
10 Feed Drives for CNC Machine Tools.	187
Requirements for Feed Drives	188
Types of Feed Drives	189
Types of Linear Motors	194
Advantages/Disadvantages of Linear Drives	195
Connection of the Drives to the CNC System	196
Encoder	198
Summary	199
Important Points to Remember	201
11 Main Spindle Drives	203
Requirements for Main Spindle Drives	203
Types of Main Spindle Drives	204
Designs of Main Spindle Drives	205
Types of Three-Phase Synchronous Motors	207
Advantages and Disadvantages of Three-Phase Synchronous Motors	208
Important Points to Remember	210
12 Dimensioning of Drives for Machine Tools	211
Procedure	211
Example	211
Dimensioning of Main Spindle Drives	216
Example	216
Summary	217
Important Points to Remember	218

13 Mechanical Layout of the Main Spindle Based on the Process Parameters	219
Motor Selection	219
Bearings	220
Lubrication	220
Machining Processes	221
Requirements for the Main Spindle in Terms of Industry 4.0	224
Important Points to Remember	227

PART 4 KINDS OF CNC MACHINES

14 CNC Machine Tools	231
Machining Centers, Milling Machines	231
Lathes	238
Grinding Machines	243
Gear-Cutting Machines	249
Drilling Machines	260
Sawing Machines	265
Laser Machining Systems	266
Punching and Nibbling Machines	273
Tube-Bending Machines	277
Electrical-Discharge Machines	278
Wire EDM	279
Electron-Beam Machines	280
Water-Jet Cutting Machines	282
Multitasking Machines	284
Measuring and Testing	290
Summary	295
Important Points to Remember	296
15 Additive Manufacturing Processes	299
Introduction	299
Definition	300
Process Chain	302
Classification of Additive Manufacturing Processes	304
Introduction to the Principal Layer Manufacturing Processes	305
Advantages of Additive Manufacturing	316
Summary	318
Important Points to Remember	319
16 Flexible Manufacturing Systems	321
Definition	321
Flexible Manufacturing Cells	323
Flexible Manufacturing Systems	324
Technical Characteristics of FMSs	328
Application Criteria for FMSs	329
Manufacturing Principles	331
Machine Selection and Layout	332

Workpiece Transport Systems	334
CNC Systems Suitable for Flexible Manufacturing	341
Host Computers in FMSs	342
Economic Advantages of FMSs	345
Problems and Risks in the Design of FMSs	346
Flexibility and Complexity.	348
Simulation of FMSs	350
Production Planning Systems	353
Summary	354
Important Points to Remember	356
17 Industrial Robots and Handling	359
Introduction	359
What Is an Industrial Robot?	360
Structure of Industrial Robots.	360
Mechanical Elements/Kinematics	360
Gripper or Effector.	362
CNC Systems	363
Safe Robot Technology.	366
Programming	368
Sensors	370
Application Examples for Industrial Robots	371
CNC-Robot Machining and Machine Tool Automation	373
Robot with CNC Requirements	374
Application Criteria for Industrial Robots	375
Summary and Outlook	377
Important Points to Remember	379
18 Energy-Efficient, Cost-Effective Fabrication	381
Introduction	381
What Is Energy Efficiency?	381
Work Floor	381
Machinery.	382
Special Case: Machining Centers	382
Energy-Efficient NC Programs.	383
Options of the Machine Manufacturer	384
Options for the User	385
Reactive Power Compensation	386
What Is Reactive Power?	388
Summary	389
Outlook	390
Important Points to Remember	390
 PART 5 TOOLS IN CNC PRODUCTION	
19 Tool Construction.	393
Introduction	393
Requirements	393

Outline of Tools	395
Machine-Based Tool Holders.	401
Modular Tool Systems	406
Adjustable Tools	406
Thread Milling.	410
Custom Tools	413
Tool Selection	413
Important Points to Remember.	414
20 Tool Management.	415
Motives for Introduction	415
Evaluation of a Tool Management System.	416
Assessment of Solutions.	418
Introduction of a Tool Management System	418
Outline.	418
Integration	419
Tool Identification	419
Retrieving Tools.	420
Tool Classification	422
Tool Components.	423
Complete Tools	424
Tool Lists	425
Operations	426
Tool Presetting	427
Tool Logistics	428
Electronic Tool Identification	430
Summary	437
Important Points to Remember.	438
21 Machine-Integrated Workpiece Measurements and Process Control	439
Introduction	439
Starting Points for Process Control	439
Areas of Application of Workpiece and Tool Measuring Systems	440
Workpiece Measurement Systems for Machine Tools	444
Important Points to Remember.	451
22 Machine-Integrated Workpiece Measurements in Series Production.	453
Introduction	453
Bore-Measuring Heads for Shortest Measuring Times in Bore Production.	454
Roughness-Measuring Devices for the Automated Surface Test.	455
Digilog Probe for Digital and Analog Data Acquisition	456
Highest Productivity with Simultaneous Measurement.	457
Summary	458
Important Points to Remember.	460
23 Laser-Based Tool Monitoring	461
Introduction	461
Tool Breakage Monitoring.	461

Single-Cutting-Edge Control	462
Measurement of HSC Tools.	463
Combined Laser Measurement Systems	463
Summary	464
Important Points to Remember	465

PART 6 NC PROGRAM AND PROGRAMMING

24 The CNC Program	469
Definitions	469
Structure of the NC Program.	470
Program Structure, Syntax, and Semantics.	472
Miscellaneous (M) Functions	474
Positioning Data	474
Preparatory (G) Functions.	477
Machining Cycles	480
Zero Points and Reference Points	482
Transformations.	487
Tool Corrections.	490
DXF Converter	493
High-Level Language Programming	498
Summary	502
Important Points to Remember	504
25 Programming CNC Machines.	505
Definition of NC Programming	505
Programming Methods	505
CAM-Based CNC Machining Strategies	510
User-Friendly Graphics	514
CNC Identical Programming Systems.	515
Selection of the Appropriate Programming System	517
Summary	520
Important Points to Remember	522
26 NC Programming Systems.	523
Introduction	523
Changing Machining Processes.	523
Area of Application Sets the Priorities	524
Input Data from Different Sources.	525
Scope of a Modern Computer-Aided Programming (CAP) System	527
High-Level Data Models	528
CAM-Oriented Geometry Manipulation	528
High-Performance Machining Strategies Are Paramount	529
Adaptive Processing.	530
3D Models Offer More	531
3D Interfaces	531
Innovation with Feature Technology.	532
Automation of NC Programming	532

Tools	536
Clamping Planning and Definition of the Sequence.	536
The Importance of Simulation.	536
Postprocessor	538
Generated Data and Interfaces with the Machine Tools	538
Summary	538
Important Points to Remember	540
27 Manufacturing Simulations	541
Introduction	541
Qualitative Classification of Systems	542
Components of a Simulation Scenario	544
Procedure for NC Simulations.	548
Integrated Simulation Systems	549
Fields of Application	550
Summary	553
Important Points to Remember	555
PART 7 FROM COMPANY INFORMATION SYSTEMS TO INDUSTRY 4.0	
28 DNC: Direct Numerical Control or Distributed Numerical Control	559
Definition	559
Functions of DNC	559
Application Criteria for DNC Systems.	560
Data Communication with CNC Systems	561
Methods for Requesting Programs.	562
DNC Systems Currently Available	563
Network Technology for DNC Systems	564
Advantages of Using Networks	566
NC Program Management.	567
Advantages of DNC Operation	568
Cost-Effectiveness of DNC	568
Current State and Trends	571
Summary	572
Important Points to Remember	574
29 LANs: Local-Area Networks	575
Introduction	575
Local-Area Networks (LANs)	576
What Is Information?	576
Characteristics and Features of LANs	577
Gateways and Bridges	583
Criteria for Selecting a Suitable LAN	583
Interfaces	585
Summary	588
Important Points to Remember	590

30 Digital Product Development and Manufacturing: From CAD and CAM to PLM	591
Introduction	591
Terminology and History	592
Digital Product Development	597
Digital Manufacturing	601
Summary	606
Important Points to Remember	608
31 Industry 4.0	609
Basics	609
Core Elements of Industry 4.0	610
Industry 4.0 in Production	615
MES as a Building Block of Industry 4.0	617
Challenges and Risks of Industry 4.0.	618
32 Industry 4.0 in the Medium-Sized Company.	621
Requirements for Industry 4.0	621
Benefits of Industry 4.0	622
Cyber-Physical Systems (CPSs), the Internet of the Things	623
Sixteen Case Studies about Industry 4.0	623
A Workday with Industry 4.0.	627
Summary	628
Important Points to Remember	630
Glossary	631
