

Table of Contents

1. Introduction	1
2. Medical background.....	8
2.1 Anatomy and biomechanics of the hip joint.....	8
2.1.1 Osseous parameters of the hip joint	9
2.2 Total hip arthroplasty (THA).....	13
2.2.1 Epidemiology	13
2.2.2 Surgical indication.....	14
2.2.3 Evaluation of outcome	15
2.2.4 Surgical approaches and implant types	15
2.2.5 Causes of revision surgery	16
2.2.6 Preoperative planning and CAOS.....	17
2.2.7 Planning criteria	19
3. Prediction of the postoperative pelvic tilt in THA.....	23
3.1 Introduction	23
3.2 Patients and methods	24
3.2.1 Patient data.....	24
3.2.2 Pelvic parametrization	25
3.2.3 Measurement of the pelvic tilt	26
3.2.4 Measurement of the lumbar lordosis angle	27
3.2.5 Multiple linear regression analysis	28
3.3 Results	30
3.4 Discussion.....	31
3.5 Conclusion	37
4. Prediction of the postoperative hip joint force in THA.....	39
4.1 Introduction	39
4.2 Patients and methods	41
4.2.1 Patient data.....	41
4.2.2 Framework for hip joint force prediction	42
4.2.3 Cadaver templates.....	43
4.2.4 Patient-specific scaling laws	43
4.2.5 Static models for hip joint force prediction	44
4.2.6 Evaluation	45
4.3 Results	46
4.4 Discussion.....	52
4.5 Conclusion	54
5. Implications for the planning process.....	56
5.1 Introduction	56
5.2 Patients and methods	57
5.2.1 Reconstruction of the patient's anatomy.....	57
5.2.2 Prediction of the pelvic tilt	58

5.2.3	Prediction of the hip joint force.....	58
5.2.4	Prosthetic ROM-based target zone.....	58
5.2.5	Load-based target zone.....	59
5.2.6	Evaluation.....	59
5.3	Results.....	60
5.3.1	Prediction uncertainty of the postoperative standing pelvic tilt.....	60
5.3.2	Prediction uncertainty of the hip joint force.....	60
5.3.3	Impact of the prediction uncertainties on the target zones.....	61
5.4	Discussion.....	62
5.5	Conclusion.....	64
6.	Discussion and outlook.....	65
6.1	Pelvic tilt prediction.....	65
6.2	Hip joint force prediction.....	66
6.3	Integration into the planning process.....	68
7.	Conclusion and future directions.....	70
References.....		I
