

Contents

1	Motivation and summary	1
1.1	Optimizing supply chains via patches	1
1.2	Precisely controlled approximation of Pareto frontiers	4
1.3	Summary of the chapters	7
2	Concepts of multicriteria optimization	9
2.1	Basics of multicriteria optimization	11
2.1.1	Problem types	13
2.1.2	The need for approximation	13
2.2	Literature review	15
2.2.1	Approximation quality	15
2.2.2	Algorithms for multicriteria optimization	17
2.2.3	Relationship to other mathematical areas	20
2.3	Challenges in multicriteria optimization addressed by this thesis	21
3	Adaptive Patch Approximation Algorithm for Bicriteria Convex Mixed Integer problems	23
3.1	Motivation and concepts	23
3.1.1	Related work	25
3.1.2	Motivation and goals for our algorithm	26
3.1.3	Results and organization of this chapter	26
3.2	The complexity of approximating Pareto frontiers with patches	27
3.2.1	Bicriteria convex mixed-integer problems	27
3.2.2	Patches	28
3.2.3	Measures of approximation quality	30
3.2.4	Patch complexity	31
3.3	The Adaptive Patch Approximation Algorithm	32
3.3.1	The iterative improvement approach	32
3.3.2	Ingredients for the analysis: lower envelopes and Pareto frontiers	34
3.3.3	Convergence bound	36
3.4	Efficiently computing segment patches	38
3.4.1	Finding good segment patches by maximizing improvement	40
3.4.2	Establishing optimality of the algorithm	43
3.5	Numerical evaluation	48
3.5.1	Computational configuration	48
3.5.2	A convex-quadratic problem	49
3.5.3	A nonlinear convex problem	50
3.5.4	Computational results on linear mixed-integer problems	50
3.5.5	Behavior on pure integer programs	54
3.6	Conclusion and future work	55
	Appendices	57
A 3.1	Proof of Proposition 3.3.5	57

A 3.2	Construction of linear inequalities to approximate the logarithm	58
A 3.3	Convex-quadratic benchmark problem	60
A 3.4	Nonlinear convex benchmark problem	61
A 3.5	Benchmark problem of Mavrotas and Diakoulaki	61
A 3.6	Capacitated facility location problem	62
A 3.7	Biobjective Assignment problem	62
4	Precise control of approximation quality for multicriteria problems	63
4.1	Introduction	63
4.1.1	Literature Review	64
4.1.2	Results of this chapter	66
4.1.3	Notation	66
4.2	The ε -indicator, an approximation quality measure	66
4.2.1	Defining the ε -indicator	66
4.2.2	Complexity of computing the ε -indicator	68
4.3	Algorithms to compute the ε -indicator	72
4.3.1	Reformulation to an optimization problem	72
4.3.2	Decomposing the model	75
4.3.3	Segment-wise method	76
4.3.4	Full reformulation method	76
4.4	Special cases in computing the ε -indicator	77
4.4.1	The bicriteria case	77
4.4.2	The case of a finite set of points	80
4.5	A point-based algorithm for Pareto frontier approximation	83
4.6	Numerical experiments	84
4.6.1	Configuration	84
4.6.2	Benchmark problem	84
4.6.3	Evaluating the dependence on the number of segments	85
4.6.4	Measuring quality of existing approximations	85
4.6.5	Performance of the Pareto frontier approximation algorithm	86
4.6.6	Comparison between the proposed algorithms	88
4.7	Conclusion and outlook	89
5	Robust multicriteria optimization of supply chains	91
5.1	Challenges in optimizing supply chains	91
5.1.1	Related work	93
5.1.2	Organization of the chapter	97
5.2	Modeling resilience in supply chains	97
5.2.1	Scenario-based modeling of uncertainties	98
5.2.2	A three-stage model for resilience	98
5.3	Multicriteria robustness concepts applied to supply chains	101
5.3.1	Worst-case robustness	101
5.3.2	Multicriteria regret	101
5.3.3	CVaR objectives	102
5.3.4	Objective-wise combination of models	103
5.4	A flexible supply chain modeling framework	103
5.4.1	Classification scheme	103
5.4.2	General model	104
5.4.3	Creating a corresponding MIP-formulation	105

5.5	Model components	106
5.5.1	Nominal constraints	106
5.5.2	Mitigation constraints	107
5.5.3	Objective functions	109
5.5.4	Incorporating sustainability	111
5.6	Examples of applications	111
5.6.1	Generation of example data	111
5.6.2	Software tool for comprehensive analysis	112
5.6.3	Pareto frontiers of example problems	114
5.6.4	Case studies for robust multicriteria applications	118
5.6.5	Running time benchmarks	120
5.7	Conclusion	121
5.7.1	Outlook on the robust multicriteria approach	122
6	Conclusion and future work	123
6.1	Obtained results	123
6.2	Further research questions	124
	Bibliography	127
7	Additional information	137
7.1	List of publications by the author	137
7.2	Curriculum Vitae	138
7.3	Wissenschaftlicher und beruflicher Werdegang	138
