

# Table of contents

## Chapter I. Probability theory

I.1	Probability spaces	1
I.2	Stochastic variables	9
I.3	Product measures and statistical independence	13
I.4	Functions of stochastic vectors	18
I.5	Expectation, variance and covariance of stochastic variables	21
I.6	Independence of normally distributed variables	30
I.7	Distribution functions and probability distributions	37
I.8	Moments, moment generating functions and characteristic functions	40
I.9	The central limit theorem	47
I.10	Transformation of probability densities	51
I.11	Exercises	53

## Chapter II. Statistics and their probability distributions, estimation theory

II.1	Introduction	62
II.2	The gamma distribution and the $\chi^2$ -distribution	66
II.3	The $t$ -distribution	76
II.4	Statistics to measure differences in mean	80
II.5	The $F$ -distribution	86
II.6	The beta distribution	90
II.7	Populations which are not normally distributed	95
II.8	Bayesian estimation	97
II.9	Estimation theory in a more general framework	103
II.10	Maximum likelihood estimation, sufficiency	119
II.11	Exercises	129

## Chapter III. Hypothesis tests

III.1	The Neyman-Pearson theory	142
III.2	Hypothesis tests concerning normally distributed populations	153
III.3	The $\chi^2$ -test on goodness of fit	165

III.4	The $\chi^2$ -test on statistical independence	171
III.5	Exercises	176

## Chapter IV. Simple regression analysis

IV.1	The method of least squares	182
IV.2	Construction of an unbiased estimator of $\sigma^2$	192
IV.3	Normal regression analysis	194
IV.4	Pearson's product-moment correlation coefficient	198
IV.5	The sum of squares of errors as a measure of the amount of linear structure	201
IV.6	Exercises	204

## Chapter V. Normal analysis of variance

V.1	One-way analysis of variance	208
V.2	Two-way analysis of variance	214
V.3	Exercises	223

## Chapter VI. Non-parametric methods

VI.1	The sign test, Wilcoxon's signed-rank test	227
VI.2	Wilcoxon's rank-sum test	233
VI.3	The runs test	238
VI.4	Rank correlation tests	241
VI.5	The Kruskal–Wallis test	246
VI.6	Friedman's test	249
VI.7	Exercises	253

## Chapter VII. Stochastic analysis and its applications in statistics

VII.1	The empirical distribution function associated with a sample	257
VII.2	Convergence of stochastic variables	259
VII.3	The Glivenko–Cantelli theorem	276
VII.4	The Kolmogorov–Smirnov test statistic	284
VII.5	Metrics on the set of distribution functions	288
VII.6	Smoothing techniques	299
VII.7	Robustness of statistics	305

VII.8	Trimmed means, the median, and their robustness	311
VII.9	Statistical functionals	326
VII.10	The von Mises derivative; influence functions	339
VII.11	Bootstrap methods	350
VII.12	Estimation of densities by means of kernel densities	357
VII.13	Estimation of densities by means of histograms	365
VII.14	Exercises	369

## **Chapter VIII. Vectorial statistics**

VIII.1	Linear algebra	382
VIII.2	The expectation vector and the covariance operator of stochastic vectors	396
VIII.3	Vectorial samples	407
VIII.4	The vectorial normal distribution	410
VIII.5	Conditional probability distributions that emanate from Gaussian ones	422
VIII.6	Vectorial samples from Gaussian distributed populations	428
VIII.7	Vectorial versions of the fundamental limit theorems	442
VIII.8	Normal correlation analysis	452
VIII.9	Multiple regression analysis	460
VIII.10	The multiple correlation coefficient	471
VIII.11	Exercises	477

<b>Appendix A.</b>	Lebesgue's convergence theorems	482
<b>Appendix B.</b>	Product measures	485
<b>Appendix C.</b>	Conditional probabilities	488
<b>Appendix D.</b>	The characteristic function of the Cauchy distribution	492
<b>Appendix E.</b>	Metric spaces, equicontinuity	495
<b>Appendix F.</b>	The Fourier transform and the existence of stoutly tailed distribution functions	504

<b>List of elementary probability densities</b>	510
<b>Frequently used symbols</b>	512
<b>Statistical tables</b>	518
<b>References</b>	537
<b>Index</b>	541
