

1	Introduction, Overview and Basics	1
1.1	Theoretical, Mainly Mathematical Fluid Mechanics	3
1.2	Engineering Fluid Mechanics or Hydraulics	4
2	Properties of Fluids	7
2.1	Molecular Composition: Microstructure	7
2.2	Resistance to Deformation (Elasticity, Viscosity)	9
2.3	Gas Kinetic Explanation of Internal Friction	15
2.4	Volume Change and Equation of State for Gases	18
2.5	Surface or Interfacial Tension and Capillarity	20
3	Hydro- and Aerostatics	35
3.1	Liquid Pressure p	35
3.2	Fluid Pressure in Force Fields	37
3.3	Pressure Force on Flat Container Walls	44
3.4	Hydrostatic Buoyancy. Pressure Force on Curved Surfaces	47
4	Hydro- and Aerodynamics	51
4.1	Flow Filament Theory	51
4.1.1	Basic Concepts	51
4.1.2	Basic Equations of the Flow Filament Theory	57
4.1.3	Flow Filament Theory in Detail	63
4.1.3.1	Movement on Concentric Circular Paths (Vortices)	63
4.1.3.2	Vortex Source or Vortex Sink Flow	66
4.1.3.3	Rotational Movement Taking into Account Gravity	67

4.1.3.4	Different Pressure Terms and Their Measurement	69
4.1.3.5	Discharge from a Container	73
4.1.3.6	Gasdynamic Considerations. The Flow in the Laval Nozzle. The Normal Shock	76
4.2	Frictionless, Plane and Spatial Flows	93
4.2.1	Continuity (=Conservation of Mass)	93
4.2.2	Euler's Equations of Motion.	94
4.2.3	Plane, Stationary, Incompressible Potential Flow	95
4.2.4	Examples of Elementary and Composite Potential Flows	101
4.2.5	Potential Flows Around Given Bodies	111
4.3	Flow with Friction.	118
4.3.1	Momentum Theorem with Applications.	118
4.3.1.1	Flow Through a Manifold	120
4.3.1.2	Free-Blowing Nozzle and Diffuser	123
4.3.1.3	Carnot Shock Diffuser	125
4.3.1.4	Borda-orifice	127
4.3.1.5	Thrust of an Air-Breathing Engine.	129
4.3.1.6	Resistance of a Half-Body in the Channel.	130
4.3.2	Angular Momentum Theorem with Application	131
4.3.2.1	Flow Through a Radial Impeller	133
4.3.3	Basics of the Influence of Friction: Similarity Parameters.	135
4.3.4	Laminar and Turbulent Flow	139
4.3.5	Velocity Distribution and Pressure Drop in Circular Pipes with Laminar and Turbulent Flow	141
4.3.6	Laminar and Turbulent Flow Through Rough Pipes (Nikuradse Diagram)	148
4.3.7	Flow in the Inlet Section.	151
4.3.8	Velocity Fluctuations and Apparent Shear Stresses	154
4.3.9	Prandtl's Mixing Length Approach for the Fluctuation Velocities	157
4.3.10	General Form of the Navier-Stokes Equations.	160
4.3.11	Special Solutions of the Navier-Stokes Equations	163
4.3.12	Introduction to Boundary Layer Theory.	168
4.3.13	Energy Theorem.	178
4.3.14	Dissipation and Viscous Potential Flows	180
4.3.15	Resistance and Pressure Drop	182
4.3.16	Similarity Considerations.	187

5 In-Depth Exercises	193
5.1 Task: Flow into a Submersible Tank (Sinking Ship).	193
5.2 Task: Oscillating Liquid Column (U-Tube Manometer).	195
5.3 Task: Time-Dependent Outflow from a Vessel (Start-Up Flow).	197
5.4 Task: General Outflow Problem	199
5.5 Task: Generalized Overflow Problem	201
5.6 Task: Wind Turbine	204
5.7 Task: Frictional Resistance in the Flow Around a Flat Plate	208
5.8 Task: Suddenly Accelerated Plate (Rayleigh-Stokes Problem)	209
5.9 Task: Compressible Inflow and Outflow	211
5.10 Task: Laval Nozzle Flow	215
5.11 Task: Speed During Free Fall (Parachutist)	216
5.12 Task: Lift Coefficients of Aircraft (Take-Off and Cruise).	217
5.13 Task: Water Jet Pump	219
5.14 Task: Anemometer	220
5.15 Task: Vortex Flow in the Cylinder Gap	223
5.16 Task: Source/Sink Flow in the Cylinder Gap	226
 Dimensions and Units of the Most Important Occurring Quantities	 229
