

Contents

Chapter 1

Advances in Intelligent Image Analysis	1
<i>Halina Kwaśnicka, Lakhmi C. Jain</i>	
1 Introduction	1
2 Chapters Included in the Book	4
3 Conclusion	5
References and Further Readings.....	6

Chapter 2

Multi-class Classification in Image Analysis via Error-Correcting Output Codes	7
<i>Sergio Escalera, David M.J. Tax, Oriol Pujol, Petia Radeva, Robert P.W. Duin</i>	
1 Introduction	8
2 ECOC Designs	9
2.1 ECOC-ONE Coding	10
2.2 DECOC and Sub-class ECOC Coding.....	12
2.3 Loss-Weighted Decoding	17
3 Experimental Results	19
3.1 Traffic Sign Categorization	20
3.2 Intravascular Ultrasound Tissue Characterization....	20
4 Conclusions.....	28
References	28

Chapter 3

Morphological Operator Design from Training Data: A State of the Art Overview.....	31
<i>Nina S.T. Hirata</i>	
1 Binary Morphological Operators.....	34
2 Designing Morphological Operators from Training Images	38
3 The Bias-Variance Tradeoff	42
4 Application Examples	47
5 Concluding Remarks	48
References	56

Chapter 4

Task-Specific Saliency for Object Recognition	59
<i>Jerome Revaud, Guillaume Lavoue, Yasuo Ariki, Atilla Baskurt</i>	
1 Introduction	59
2 An Extended Definition of Saliency	61
3 A Practical Example for Specific Object Recognition	70
4 Conclusion and Perspectives	81
References	83

Chapter 5

Fast and Efficient Local Features Detection for Building Recognition	87
<i>G.P. Nguyen, H.J. Andersen</i>	
1 Introduction	87
2 Local Feature Detectors	89
3 Local Feature Detectors under Large Temporal Variation ...	92
4 Selection of Informative Local Features	94
4.1 Uniqueness Filtering for Local Features	94
4.2 Evaluation	96
5 System and Application	98
5.1 System Scheme	98
5.2 Application	98
5.3 Scenario	99
5.4 Evaluation	101
6 Conclusion	103
References	103

Chapter 6

Visual Perception in Image Analysis: Digital Image Content via Tolerance Near Sets	105
<i>James F. Peters</i>	
1 Introduction	106
2 Related Works	106
3 Tolerance Spaces and Visual Perception	107
4 History of Near Sets Underlying Perception in Image Analysis	109
5 Visual Tolerance Spaces and What We See	113
6 Visual Space	114
7 Resemblance between Tolerance Spaces	116
8 Implementation of a Nearness System	120
9 Conclusion	121
References	122

Chapter 7

**An Introduction to Magnetic Resonance Imaging:
From Image Acquisition to Clinical Diagnosis** 127
Kenneth Revett

- 1 Introduction to MRI 127
 - 1.1 The Historical Development of MRI 127
- 2 The Basics of MRI 130
 - 2.1 Overview of the Image Acquisition Process 131
 - 2.2 The Physics behind MRI 133
 - 2.3 Generation of an MRI Image..... 136
 - 2.4 Slice Selection 138
 - 2.5 Spatial Encoding 139
- 3 Tissue Contrast 142
- 4 Image Processing of MRI 146
 - 4.1 Edge Detection 146
 - 4.2 Image Segmentation 147
 - 4.3 Voxel-Based Morphometry 152
 - 4.4 Fiber Tractography 154
- 5 Medical Applications..... 155
 - 5.1 Stroke 156
 - 5.2 Dementias 158
- 6 Conclusion 159
- References 160

Chapter 8

**Image Analysis in Poincaré-Peters Perceptual
Representative Spaces: A Near Set Approach** 163
Sheela Ramanna

- 1 Introduction 164
- 2 Related Works 166
- 3 Basic Notions 168
 - 3.1 Description and Perceptual Systems 168
 - 3.2 Perceptual Pawlak Partitions 168
- 4 Near Sets and Perceptually Near Pawlak Partitions 171
 - 4.1 Near Sets 171
 - 4.2 Representative Spaces..... 172
 - 4.3 Perceptually Near Digital Images 177
- 5 Probe Functions for Image Features..... 178
 - 5.1 Edge Features 178
 - 5.2 Region Features 178
- 6 Nearness Measures 179
 - 6.1 Tolerance Representative Space-Based Nearness
Measures 180

6.2	Hausdorff Nearness Measure (H_dNM)	181
6.3	Generalized Mahalanobis Nearness Measure (gMNM)	181
7	Illustration: Image Nearness Measures	182
7.1	Analysis of Hausdorff Nearness Measure: Image Retrieval Experiments	183
7.2	Analysis of Generalized Mahalanobis Nearness Measure: Image Retrieval Experiments	184
7.3	Remarks on Quality of Retrieval	185
7.4	Performance Measure	186
8	CBIR Experiments on Two Image Archives	189
9	Conclusion	190
	References	191

Chapter 9

Local Keypoints and Global Affine Geometry:

Triangles and Ellipses for Image Fragment Matching

Mariusz Paradowski, Andrzej Śluzek

1	Introduction	195
2	Keypoints: Detectors and Descriptors	198
2.1	Keypoint Detectors	198
2.2	Keypoint Descriptors	201
3	Matching Image Fragments	201
3.1	Keypoint Matching	202
3.2	Affine Transformation Reconstruction	203
3.3	Affine Transformation Decomposition	207
3.4	Histograms of Affine Transformations	211
3.5	Image Fragment Matching by Histogram Analysis	215
3.6	Histogram Bins Grouping	216
4	Parameters, Evaluation and Applications	216
4.1	Method Parameters	216
4.2	Method Evaluation	218
4.3	Forming Visual Classes – An Intended Application	221
5	Summary	222
	References	223

Chapter 10

Feature Analysis for Object and Scene Categorization

Jeremiah D. Deng

1	Introduction	225
2	Relevant Work	226
3	Feature Selection	228

4	Case Studies	230
5	Discussion and Conclusion	241
	References	242

Chapter 11

Introduction to Curve and Edge Parametrization by

Moments	245
----------------------	-----

Irina Popovici, Wm. Douglas Withers

1	Background	245
2	Mathematical Theory of Solvability	248
3	The Constructive Moment-Analysis Method	253
4	Moment-Based Line Parametrization	254
5	Parametrizing Higher-Order Curves and Surfaces	258
6	Implicit versus Explicit Solution	265
	References	273

Chapter 12

Intelligent Approaches to Colour Palette Design	275
--	-----

Gerald Schaefer

1	Introduction	275
2	Optimisation for Colour Palette Design	276
3	Fuzzy Clustering for Colour Palette Design	280
4	Rough Clustering for Colour Palette Design	285
5	Experimental Results	286
6	Conclusions	288
	References	288

Chapter 13

Mean Shift and Its Application in Image Segmentation	291
---	-----

Huiyu Zhou, Xun Wang, Gerald Schaefer

1	Introduction	291
2	Mean Shift	293
3	Fuzzy C-Means with Mean Shift	293
	3.1 Anisotropic Mean Shift	294
	3.2 Anisotropic Mean Shift Based FCM	296
4	Dirichlet Process Mixture Models with Mean Shift	297
	4.1 Dirichlet Process Mixtures with Markov Random Fields	298
	4.2 MDP/MRF with Mean Shift	299
5	Gradient Vector Flow Snakes with Mean Shift	300
	5.1 Segmentation Constrained by Mean Shift	302
	5.2 GVF-Means Shift Segmentation	302

6	Evaluation and Discussion	303
6.1	Anisotropic Mean Shift Based FCM	303
6.2	Dirichlet Process Mixture Models with Mean Shift...	306
6.3	Gradient Vector Flow with Mean Shift	307
7	Summary	310
	References	311
	Author Index	313
